Languages and Compilers for Parallel Computing Siddhartha Chatterjee, Jan F. Prins, Larry Carter, Jeanne Ferrante, Zhiyuan L. Li, David Sehr, Pen-Chung Yew, 2003-06-26 LCPC 98 Steering and Program Committees for their time and energy in viewing the submitted papers Finally and most importantly we thank all the authors and participants of the workshop It is their significant research work and their enthusiastic discussions throughout the workshop that made LCPC 98 a success May 1999 Siddhartha Chatterjee Program Chair Preface The year 1998 marked the eleventh anniversary of the annual Workshop on Languages and Compilers for Parallel Computing LCPC an international forum for leading research groups to present their current research activities and latest results The LCPC community is interested in a broad range of technologies with a common goal of developing software systems that enable real applications

Among the topics of interest to the workshop are language features communication code generation and optimization communication libraries distributed shared memory libraries distributed object systems resource management systems integration of compiler and runtime systems irregular and dynamic applications performance evaluation and debuggers LCPC 98 was hosted by the University of North Carolina at Chapel Hill UNC CH on 7-9 August 1998 at the William and Ida Friday Center on the UNC CH campus Fifty people from the United States Europe and Asia attended the workshop The program committee of LCPC 98 with the help of external reviewers evaluated the submitted papers Twenty four papers were selected for formal presentation at the workshop Each session was followed by an open panel discussion centered on the main topic of the particular session Collaboration between Human and Artificial Societies Julian A. Padget, 2006-12-31 The full title of the HCM network project behind this volume is VIM A virtual multicomputer for symbolic applications The three strands which bound the network together were parallel systems advanced compilation techniques and artificial intelligence with a common substrate in the programming language Lisp The initial aim of the project was to demonstrate how the combination of these three technologies could be used to build a virtual multicomputer an ephemeral persistent machine of available heterogeneous computing resources for large scale symbolic applications The system would support a virtual processor abstraction to distribute data and tasks across the multicomputer the actual physical composition of which may change dynamically Our practical objective was to assist in the prototyping of dynamic distributed symbolic applications in artificial intelligence using whatever resources are available probably networked workstations so that the developed program

could also be run on more exotic hardware without reprogramming What we had not foreseen at the outset of the project was how agents would unify the strands at the application level as distinct from the system level outlined above It was as a result of the agent in uence that we held two workshops in May and December 1997 with the title Collaboration between human and arti cial societies The papers collected in this volume are a selection from presentations made at those two workshops In each case the format consisted of a number of invited speakers plus presentations from the network partners

Programming Languages Norman Ramsey,2022-10-27 Computer scientists often need to learn new programming languages quickly The best way to prepare for this is to understand the foundational principles that underlie even the most complicated industrial languages This text for an undergraduate programming languages course distills great languages and their design principles down to easy to learn bridge languages implemented by interpreters whose key parts are explained in the text The book goes deep into the roots of both functional and object oriented programming and it shows how types and modules including generics polymorphism contribute to effective programming The book is not just about programming languages it is also about programming Through concepts examples and more than 300 practice exercises that exploit the interpreter students learn not only what programming language features are but also how to do things with them Substantial implementation projects include Milner s type inference both copying and mark and sweep garbage collection and arithmetic on arbitrary precision integers

Languages and Compilers for Parallel Computing Lawrence Rauchwerger,2004-02-25 This book constitutes the thoroughly refereed post proceedings of the 16th International Workshop on Languages and Compilers for Parallel Computing LCPC 2003 held in College Station Texas USA in October 2003 The 35 revised full papers presented were selected from 48 submissions during two rounds of reviewing and improvement upon presentation at the workshop The papers are organized in topical sections on adaptive optimization data locality parallel languages high level transformations embedded systems distributed systems software low level transformations compiling for novel architectures and optimization infrastructure
