Longterm Stewardship And The Nuclear Weapons Complex:

Long-Term Stewardship and the Nuclear Weapons Complex Katherine N. Probst, Michael H. McGovern, 2014-04-04

Decades of U S nuclear weapons production have exacted a heavy environmental toll The Department of Energy estimates that cleaning up waste and contamination resulting from production activities will cost over 150 billion Yet even once that money is spent these sites will need long term attention to assure protection of human health and the environment In the authors words stewardship refers to institutions information and strategies needed to ensure protection of people and the environment both in the short and the long term Probst and McGovern make a compelling case for establishing a formal program of long term stewardship for contaminated sites Their report details the requirements of a successful stewardship program and discusses the daunting technical and political challenges facing such efforts including the designation of an institutional home for key stewardship functions The legacy of environmental damage is considerable hazardous waste disposal radioactive waste and contaminated facilities are among the problems that will remain after DOE cleanup efforts are complete Stewardship planning according to Probst and McGovern must start now

Long-Term Stewardship Study Draft: Draft for Public Comment , 106-2 Hearings: Energy And Water Development Appropriations For 2001, Part 6, March 21, 2000 ,2000 Forum for Applied Research and Public Policy ,1999 Energy and Water Development Appropriations for 2001 United States. Congress. House. Committee on Appropriations. Subcommittee on Energy and Water Development,2000 **Energy and Water Development Appropriations for 2001: Department of Energy United States. Congress. House. Committee on Appropriations. Subcommittee on Energy and Water Development,2000 **Long-Term Institutional Management of U.S. Department of Energy Legacy Waste Sites** National Research Council,Commission on Geosciences, Environment, and Resources,Board on Radioactive Waste Management,Committee on the Remediation of Buried and Tank Wastes,2000-11-09**

It is now becoming clear that relatively few U S Department of Energy DOE waste sites will be cleaned up to the point where they can be released for unrestricted use Long term stewardship activities to protect human health and the environment from hazards that may remain at its sites after cessation of remediation will be required for over 100 of the 144 waste sites under DOE control U S Department of Energy 1999 After stabilizing wastes that remain on site and containing them as well as is feasible DOE intends to rely on stewardship for as long as hazards persist in many cases indefinitely Physical containment barriers the management systems upon which their long term reliability depends and institutional controls intended to prevent exposure of people and the environment to the remaining site hazards will have to be maintained at some DOE sites for an indefinite period of time The Committee on Remediation of Buried and Tank Wastes finds that much regarding DOE s intended reliance on long term stewardship is at this point problematic The details of long term stewardship planning are yet to be specified the adequacy of funding is not assured and there is no convincing evidence that institutional controls and other stewardship measures are

reliable over the long term Scientific understanding of the factors that govern the long term behavior of residual contaminants in the environment is not adequate Yet the likelihood that institutional management measures will fail at some point is relatively high underscoring the need to assure that decisions made in the near term are based on the best available science Improving institutional capabilities can be expected to be every bit as difficult as improving scientific and technical ones but without improved understanding of why and how institutions succeed and fail the follow through necessary to assure that long term stewardship remains effective cannot reliably be counted on to occur Long Term Institutional Management of U S Department of Energy Legacy Waste Sites examines the capabilities and limitations of the scientific technical and human and institutional systems that compose the measures that DOE expects to put into place at potentially hazardous residually contaminated sites *Energy and Water Development Appropriations for 2004* United States.
