Model Systems Of Development And Aging Of The Nervous System:

Model Systems of Development and Aging of the Nervous System Antonia Vernadakis, Alain M. Privat, Jean M. Lauder, Paola S. Timiras, 2012-12-06 The last decade has generated a multitude of studies using in vitro model systems to explore growth and differentiation of the nervous system Although the findings have been exciting and have revealed unique properties of neural cells considerable concern continues to be expressed regarding the significance of in vitro findings in terms of their applicability to in vivo biological events To examine this issue further a group of scientists presented and discussed their findings at a conference sponsored by the Institute of Developmental Neuroscience and Aging held in Crete Greece 26-29 May 1985 The conference was cosponsored by the University of Crete and was generously supported by the Ministry of Research and Technology of Greece Tourism Organization of Greece and also Sandoz and FIDIA The Directors of the Institute of Developmental Neuroscience and Aging are indebted to these Institutions for their support For the success of this conference the Directors owe much to Drs Eleni Fleischer Lambropoulos and Yiannis Tsouderos who spent countless hours in making arrangements so that the participants would have not only a scientific but also a unique cultural experience Several chapters of this book focus on the complex phenomena of neurogenesis and gliogenesis and the modulation of neuronal differentiation The concept that neuronal differentiation has both genetic and epigenetic components is documented by elegant studies using both in vitro cultured cells and neurons transplanted in vivo **Glial-Neuronal**

Communication in Development and Regeneration Hans H. Althaus, Wilfried Seifert, 2013-06-29 This comprehensive volume is a contribution to a new series initiated by the NATO Panel on Gell to Gell Signals in Plants and Animals The book reflects the outcome of an NATO workshop and brings to mind two important questions considering the mass of relevant literature available is there any necessity for a new series of books and considering the flood of comparable meetings is there any point in workshops of this nature and their publication In order to deal with such questions adequately much more space would be needed than is available in a foreword Thus the answers must remain rather superficial and of course rather subjective To simplify the issue the question of publication can be narrowed down to two factors the financial risk undertaken by the publisher and the scientific risk borne by the editor If the book is good with respect to layout and content it will be a success nothing will be lost the people involved will enhance their reputation We are left with the question of the usefulness of workshops Without doubt it is indeed a useful procedure for experts to come together in an atmosphere of harmony and freedom from external pressures and time limitations to discuss a well defined theme Whether in agreement or disagreement a fair and open forum can be expected for a variety of contributions **National Library of Medicine**

Current Catalog National Library of Medicine (U.S.), 1987 *Current Catalog* National Library of Medicine (U.S.), First multi year cumulation covers six years 1965-70 **Taurine** John B. Lombardini, Stephen W. Schaffer, Junichi Azuma, 2012-12-06 The underlying philosophy of these two symposia on taurine remains the same as all those that have been

held previously the best way to remain current in the subject matter is to talk directly with the investigators at the forefront of the field Thus we brought together some 50 individuals from 11 different countries who have keen interests and active research programs in the many faceted areas of taurine research The meetings were held on October 8 10 1991 in an elegant setting in a resort area at Orange Beach Alabama approximately 50 miles outside of Mobile on the Gulf Coast The meetings were programmed as two separate Symposia held sequentially The first symposia on October 8 was devoted exclusively to taurine research in the cat primarily in the area of nutrition and entitled The Waltham Symposium on Taurine and Cat Nutrition The second symposia on October 9 and 10 was open to all fields of taurine research and was entitled International Taurine Symposium New Dimensions on its Mechanisms of Actions If the philosophy of these meetings was to bring both experts and novices together in a discussion and presentation of current taurine research then the major purpose of the Proceedings is to document the current research efforts and to present an objective summary of where the taurine field stands today and where the focus will be in the future

Development, Maturation, and Senescence of Neuroendocrine Systems Colin G. Scanes, 2012-12-02 Development Maturation and Senescence of Neuroendocrine Systems A Comparative Approach discusses the various phases of the aging continuum of neuroendocrine systems This book explores the fundamental and physiological component of animals which is an essential contributor to senescence Organized into three parts encompassing 21 chapters this volume starts with a discussion of the concept of neurosecretory neuron that was introduced by Ernst Scharrer in 1928 This book discusses the challenges in the study of the development of the neuroendocrine system in insects with a focus on Lepidoptera Other chapters consider the neuroendocrine mechanisms that control the physiological processes in crustaceans The reader is then introduced to the major neurohemal structures in crustaceans including the sinus gland the pericardial organs and the post commissural organs The final chapter discusses the two brain systems that show impact of endogenous steroids that account for subsets of senescent changes This book is a valuable resource for neurobiologists molecular biologists and immunologists
