Subsurface Hydrological Responses to Land Cover and Land Use Changes Makoto Taniguchi, 2012-12-06 Since human beings first appeared on the earth we have changed land cover and land use for our own purposes such as conveniences and high productivity As a result of the land cover and land use changes many serious environmental problems occur on the earth Studying meteorological and hydrological effects of vegetation and land cover use changes helps us to understand the environmental changes and problems happening near the earth surface because the vegetation distributes the solar energy and water on the earth surface into atmosphere and geosphere Subsurface hydrological responses to land cover and land use changes have drawn only regional environmental concerns although global change caused by biosphere change has been studied in various scientific fields The changes in land cover and land use alter water solute and heat cycles in basins and elements of those balances including evapotranspiration groundwater recharge rate discharge rates into rivers or ocean and soil moisture content which are directly or indirectly related to the global environmental issues Therefore the changes in biosphere may substantially alter the subsurface hydrological system For instance increased groundwater recharge rates following clearing forest into grasses might be one consequence resulting in rising water tables and salinization

The Environmental Chemistry of Aluminum Garrison Sposito, 2020-04-08 The Environmental Chemistry of Aluminum provides a comprehensive fundamental account of the aqueous chemistry of aluminum within an environmental context An excellent reference for environmental chemists and scientific administrators of environmental programs this book contains material reflecting the many recent changes in this rapidly developing discipline The first three chapters discuss the most fundamental aspects of aluminum chemistry its quantitation in soils and natural waters including speciation measurements and its stable chemical forms both as a dissolved solute and in a solid phase These

chapters emphasize both critical assessments of and definitive recommendations for laboratory methodologies and measured thermodynamic properties relating to aluminum chemistry The next four chapters in *The Environmental Chemistry of Aluminum* build on this foundation to provide details of the polymeric chemistry of aluminum its polynuclear and colloidal hydrolytic species in aqueous solution its complexes with natural organic ligands including humic substances and its role as an adsorptive and adsorbent in surface reactions These chapters are grounded in experimental results rather than conceptual modeling The final three chapters describe the chemistry of aluminum in soils waters and watersheds These chapters illustrate the problems of spatial and temporal variability metastability and scale that continue to make aluminum geochemistry one of the great challenges in modern environmental science Subsurface-Water Hydrology V.P. Singh, Bhishm Kumar, 2012-12-06 Water is vital to life maintenance of ecological balance economic development and sustenance of civilization Planning and management of water resources and its optimal use are a matter of urgency for most countries of the world and even more so for India with a huge population Growing population and expanding economic activities exert increasing demands on water for varied needs domestic industrial agricultural power generation navigation recreation etc In India agriculture is the highest user of water The past three decades have witnessed numerous advances as well as have presented intriguing challenges and exciting opportunities in hydrology and water resources Compounding them has been the growing environmental consciousness Nowhere are these challenges more apparent than in India As we approach the twenty first century it is entirely fitting to take stock of what has been accomplished and what remains to be accomplished and what accomplishments are relevant with particular reference to Indian conditions **The Handbook of Groundwater Engineering** John H. Kocurek, Bayle Woodside, 1995-12-31 This guide book provides references and resources for the complex field of hazardous waste and hazardous materials management The book is divided into general topics such as air quality industrial wastewater pollution prevention and risk assessment under hazardous waste management and chemical hazards emergency planning and hazard communication under hazardous materials management Each individual section includes a list of annotated bibliographies of the most recent books by major publishers as well as established standard references Following the annotated titles are additional references of books and documents by publishers technical associations and governmental agencies primarily the U S Environmental Protection Agency In general only references from 1986 onward are included since the technology and regulations affecting hazardous

waste and materials are constantly evolving Additional resources included in the book are video tapes for training and instruction information services and databases libraries agency contacts technical journals and a list of publishers and ordering information This book will be a useful reference to professionals in the environmental field who need an extensive but concise source of technical information and contacts The book will be a valuable addition to individual libraries and will fill a current reference void in university libraries and technical libraries in industry and government At present there are very few technical bibliographies in the field and none has covered topics related to hazardous materials and hazardous waste as extensively as this book
