Modeling Marine Systems:

Modeling Marine Systems A. M. Davies, 2018-01-18 This two volume reference presents a series of review and research articles on advances in computing marine physics and remote sensing and addresses their importance to shallow sea modeling. Intended as a tribute to Dr Norman Heaps, topics in the book reflect the range and diversity of his work as well as his influence on international marine science. Topics discussed include numerical techniques, flow in homogeneous sea regions, stratified flows, lake regimes, validation of numerical models, remote sensing as a method to collect oceanographic data at the sea surface and bottom boundary modeling. Marine scientists actively involved in mathematical modeling and scientists who are interested in using models as tools to gain more insight and understanding of the processes they are observing will find this text useful.

Marine Systems Identification, Modeling and Control Tony Roskilly, Rikard Mikalsen, 2015-04-06 Marine Systems Identification, Modeling and Control is a concise stand alone resource covering the theory and practice of dynamic systems and control for marine engineering students and professionals. Developed from a distance learning CPD course on marine control taught by the authors, the book presents the essentials of the subject including system representation and transfer feedback control and closed loop stability. Simulation code and worked examples are provided for both Scilab and MATLAB, making it suitable for both those without access to expensive software and those using MATLAB in a professional setting. This title considers the key topics without superfluous detail and is illustrated with marine industry examples. Concise and practical, covering the relevant theory without excessive detail. Industry specific examples and applications for marine engineering students and professionals. Clearly presents key topics of the subject including system representation and transfer feedback control and closed loop stability, making it ideal for self study or reference. Simulation code and worked examples using Scilab and MATLAB provided on the book's companion website.

Biological Invasions in Marine Ecosystems Gil Rilov,Jeffrey A. Crooks,2008-11-19 Biological invasions are considered to be one of the greatest threats to the integrity of most ecosystems on earth This volume explores the current state of marine bioinvasions which have been growing at an exponential rate over recent decades Focusing on the ecological aspects of biological invasions it elucidates the different stages of an invasion process starting with uptake and transport through inoculation establishment and finally integration into new ecosystems Basic ecological concepts all in the context of bioinvasions are covered such as propagule pressure species interactions phenotypic plasticity and the importance of biodiversity The authors approach bioinvasions as hazards to the integrity of natural communities but also as a tool for better understanding fundamental ecological processes Important aspects of managing marine bioinvasions are also discussed as are many informative case studies from around the world

Biological, Physical and Geochemical Features of Enclosed and Semi-enclosed Marine Systems E.M. Blomqvist,E. Bonsdorff,Karel Essink,2013-06-29 The proceedings of the joint BMB 15 and ECSA 27 Symposium provides the reader with some of the advances in the study of biology ecology and physical and biochemical modelling of enclosed or semi enclosed marine brackish and estuarine systems the Baltic Sea the North Sea the White Sea the Black Sea and the Ionian Sea The book covers a wide range of topics in this field including hydrography and modelling eutrophication environmental gradients pelagic and benthic communities introduced species and case studies of environmental impact This volume of 28 papers summarizes current knowledge on the broad scale topics of enclosed and semi enclosed marine systems and should be of interest to scientists students and administrators within the field of marine ecology environmental impact control and conservation
