Modelling Fun To Do S:

Brownian Models of Performance and Control J. Michael Harrison, 2013-12-02 Direct and to the point this book from one of the field's leaders covers Brownian motion and stochastic calculus at the graduate level and illustrates the use of that theory in various application domains emphasizing business and economics The mathematical development is narrowly focused and briskly paced with many concrete calculations and a minimum of abstract notation The applications discussed include the role of reflected Brownian motion as a storage model queueing model or inventory model optimal stopping problems for Brownian motion including the influential McDonald Siegel investment model optimal control of Brownian motion via barrier policies including optimal control of Brownian storage systems and Brownian models of dynamic inference also called Brownian learning models or Brownian filtering models

Agent-Based Modelling of Worker Exploitation Thomas Chesney, 2021-07-22 This book illustrates the potential for computer simulation in the study of modern slavery and worker abuse and by extension in all social issues It lays out a philosophy of how agent based modelling can be used in the social sciences In addressing modern slavery Chesney considers precarious work that is vulnerable to abuse like sweat shop labour and prostitution and shows how agent modelling can be used to study understand and fight abuse in these areas He explores the philosophy application and practice of agent modelling through the popular and free software NetLogo This topical book is grounded in the technology needed to address the messy chaotic real world problems that humanity faces in this case the serious problem of abuse at work but equally in the social sciences which are needed to avoid the unintended consequences inherent to human responses It includes a short but extensive NetLogo guide which readers can use to quickly learn this software and go on to develop complex models This is an important book for students and researchers of computational social science and others interested in agent based modelling
