Modelling Of Melanocortin Receptors And Their Ligands:

Modelling of Melanocortin Receptors and Their Ligands Peteris Prusis, 2001 **Ligand Design for G Protein-coupled Receptors** Didier Rognan, 2006-08-21 G protein coupled receptors GPCRs are one of the most important target classes in pharmacology and are the target of many blockbuster drugs Yet only with the recent elucidation of the rhodopsin structure have these receptors become amenable to a rational drug design Based on recent examples from academia and the pharmaceutical industry this book demonstrates how to apply the whole range of bioinformatics chemoinformatics and molecular modeling tools to the rational design of novel drugs targeting GPCRs Essential reading for medicinal chemists and drug designers working with this largest class of drug targets in the human genome **G Protein-Coupled Receptors - Modeling and Simulation** Marta Filizola, 2013-10-25 G protein coupled receptors GPCRs are heptahelical transmembrane receptors that convert extra cellular stimuli into intra cellular signaling and ultimately into biological responses Since GPCRs are natural targets for approximately 40% of all modern medicines it is not surprising that they have been the subject of intense research Notwithstanding the amount of data generated over the years discovering ligands of these receptors with optimal therapeutic properties is not straightforward and has certainly been hampered for years by the lack of high resolution structural information about these receptors Luckily there has been a steady increase of high resolution crystal structures of these receptors since 2007 and this information integrated with dynamic inferences from computational and experimental methods holds great potential for the discovery of new improved drugs This book which provides for the first time state of the art views on modeling and simulation of GPCRs is divided into 4 parts In the first part the impact of currently available GPCR crystal structures on structural modeling is discussed extensively as are critical insights from simulations in the second part of the book The third part reports recent progress in rational ligand discovery and mathematical modeling whereas the fourth part provides an overview of bioinformatics tools and resources that are available for GPCRs **Neuropeptide GPCRs in neuroendocrinology** Jae Young Seong, Hubert Vaudry, 2014-11-07 The human genome encompasses 860 G protein coupled receptors GPCRs including 374 non chemosensory GPCRs Half of these latter GPCRs recognize neuro peptides as natural ligands GPCRs thus play a pivotal role in neuroendocrine communication In particular GPCRs are involved in the neuroendocrine control of feeding behavior reproduction growth hydromineral homeostasis and stress response GPCRs are also major drug targets and hence possess a strong potential for the development of innovative pharmaceuticals The aim of this Research Topic was to assemble a series of review articles and original research papers on neuropeptide GPCRs and their ligands that would illustrate the different facets of the studies currently conducted in this domain Melanocortins Anna Catania, 2011-01-11 It is clear that the melanocortins are of immense academic interest Further these molecules have remarkable potential as pharmaceutical agents for treatment of multiple human and veterinary disorders and diseases The evidence to support academic interest and clinical applications

lies in significant part within the chapters of this book chapters written by noted experts in the field who have worked diligently to understand the molecules and to move them toward clinical applications I personally believe that the MSH molecule and its derivatives will be used as routine therapeutics in the very near future My belief is so strong that I left academia to form a company based on MSH analogs and have caused millions of dollars to be spent on melanocortin research Now why would a sane professor pick up such a challenge and enter business an essential step toward any clinical application It is the MSH story that drove me Consider that MSH occurs in exactly the same amino acid sequence in humans and in the sea lamprey an organism unchanged since its appearance during the Pennsylvanian period of the Paleozoic era about 300 million years ago way before dinosaurs were to be considered There is unpublished evidence that the stability of the molecule can be traced back a half billion years Frankly I believe that the molecule existed even when single cells began to live together

Progress in Medicinal Chemistry F.D. King,G. Lawton,2007-04-13 The success of any drug discovery project relies upon the quality of the lead that initiates the lead optimization process What defines a quality lead where these quality leads come from and how one

discovers them has been the subject of intense debate within the pharmaceutical industry relies upon defining those properties that historically have led to successful drug discovery This volume addresses these questions and specifically discusses diabetes obesity and tuberculosis Presents the latest research in the field of drug discovery Publishes on an annual basis to bring you the most innovative updates in medicinal chemistry Available as an online resource via ScienceDirect

The Melanocortin System Roger D. Cone, 2003 In the decade before the publication of this study melanocortin biology matured Three additional receptors were discovered and animal models were established addressing the function of each receptor Researchers now know that the diverse physiologic responses to melanocortins including their role in development weight and endocrine regulation cortisol production secretion from exocrine glands and pigmentation can be defined in terms of individual receptors In this text contributors from the field of evolutionary biology peptide chemistry pigmentation biology neuroscience endocrinology and genetics provide the reader with a comprehensive review of melanocortin biology Six areas of active research are addressed peptide and small molecule chemistry receptor structure and function energy homeostasis pigmentation adrenocortical function and behaviour There are 56 papers and 20 posters altogether taken from the Fifth Melanocortin Meeting held in 2002
