financial and statistical foundations Modern Actuarial Risk Theory Rob Kaas,Marc Goovaerts,Jan Dhaene,2008-12-03 Modern Actuarial Risk Theory contains what every actuary needs to know about non life insurance mathematics It starts with the standard material like utility theory individual and collective model and basic ruin theory Other topics are risk measures and premium principles bonus malus systems ordering of risks and credibility theory It also contains some chapters about Generalized Linear Models applied to rating and IBNR problems As to the level of the mathematics the book would fit in a bachelors or masters program in quantitative economics or mathematical statistics This second and **How to Build a Modern Tontine** Moshe Arye Milevsky,2022-06-07 This open access book introduces the modern tontine and its applications in retirement and decumulation Personal financial management in the later stages of life presents unique challenges and renowned retirement planning expert Dr Milevsky proposes the modern tontine as a solution With the goal of guiding professionals and retirees in more efficient decumulation the book demonstrates how to build a modern tontine It is technically oriented employing a cookbook format featuring R code and examining retirement planning through a statistical lens This how to guide which is a sequel to his 2020 book Retirement Income Recipes in R will be invaluable for retirement planning professionals and advisors as well as for PhD scholars in retirement planning quantitative finance and related fields This book is open access Financial and Insurance Formulas Tomas Cipra,2010-07-16 Financial and insurance calculations become more and more frequent and helpful for many users not only in their profession life but sometimes even in their personal life Therefore a survey of formulas of nancial and insurance mathematics that can be applied to such calculations seems to be a suitable aid In some cases one should use instead of the term formula more suitable terms of the type method p cedure or algorithm since the corresponding calculations cannot be simply summed up to a single expression and a verbal description without introducing complicated symbols is more appropriate The survey has the following ambitions The formulas should be applicable in practice it has motivated their choice for this survey rst and foremost On the other hand it is obvious that by time one puts to use in practice seemingly very abstract formulas of higher mathematics e g when pricing nancial derivatives evaluating nancial risks applying accou ing principles based on fair values choosing alternative risk transfers ARL in insurance and the like The formulas should be error free though such a goal is not achievable in full since in the nancial and insurance framework one publishes sometimes in a h tic way various untried formulas and methods that may be incorrect Of course the formulas are introduced here without proofs because their derivation is not the task of this survey
