Electrical Systems and Equipment D.J. Littler, 2014-03-14 Electrical Systems and Equipment is the work of some 50

electrical design specialists in the power engineering field based largely on the work and experience of GDCD's Generation Development and Constructor Division of the CEGB Electrical Branch. The volume describes the design philosophies and techniques of power engineering, the solutions to the large number of design problems encountered and the plant which has been chosen and developed to equip electrical systems both within the different types of new power station and modification tasks at existing stations.

Turbines, Generators and Associated Plant D.J. Littler, 2013-10-22. The introduction of new 500 MW and 660 MW turbine generator plant in nuclear coal and oil fired power stations has been partly responsible for the increase in generating capacity of the CEGB over the last 30 years. This volume provides a detailed account of experience gained in the development, design, manufacture, operation and testing of large turbine generators in the last 20 years. With the advance in analytical and computational techniques, the application of this experience to future design and operation of large turbine generator plant will be of great value to engineers in the industry.

Chemistry and Metallurgy A. Sherry, J. S. Beck, A.E. Cruddace, 2013-10-22. **Modern Power Station Practice Volume 5 Chemistry and Metallurgy** focuses on power station chemistry and metallurgy. The book first offers information on power station chemistry including the use, preparation, sampling, storage and transport of coal to power stations. Other considerations include the commercial use of ash analysis and testing of coal and coke, gas side cleaning of boilers, oil firing, burner fuels, testing of fuel oils and gases and air pollution. The text also reviews water treatment relative to the operation of boilers. The corrosion of metals, sampling and analysis of feed water, boiler water and steam instrumentation for quality control and on load corrosion of boilers are discussed. The book also looks at cooling water systems in water treatment plants. Topics include water softening, evaporators, sources and quality of raw water, demineralization and boiler feed water composition. The text also gives emphasis to plant cleaning and inspection and metallurgy and welding. The book is a valuable reference for readers interested in power station chemistry and metallurgy.

Modern Power Station Practice: Instrumentation, controls and testing Great Britain. Central Electricity Generating Board, 1971.

Station Planning and Design P.C. Martin, 2013-10-22. The planning and design of new power stations can involve complex interaction between the many engineering disciplines involved as well as environmental, planning, economical, political and social pressures. This volume aims to provide a logical review of the procedures involved in power station development. The engineering aspects are outlined in detail with examples showing the basis of the relationships involved together with non-engineering factors so that the engineer can draw on the information provided for specific projects. The civil engineering and building of power stations are also treated from the earliest planning and site selection studies through estimating, finance and quantity surveying to final landscaping.

Nuclear Power Generation P.B. Myerscough, 2013-10-22. Nuclear power generation has undergone major expansion and developments in recent years. This third edition contains much revised material in presenting the state of the art of nuclear power station designs currently in operation throughout the world. The volume covers nuclear physics and basic technology, nuclear station

design nuclear station operation and nuclear safety Each chapter is independent but with the necessary technical overlap to provide a complete work on the safe and economic design and operation of nuclear power stations **Modern Power Station Practice** P. Hambling, 1991 The introduction of new 500 MW and 660 MW turbine generator plant in nuclear coal and oil fired power stations has been partly responsible for the increase in generating capacity of the CEGB over the last 30 years This volume provides a detailed account of experience gained in the development design manufacture operation and testing of large turbine generators in the last 20 years With the advance in analytical and computational techniques the application of this experience to future design and operation of large turbine generator plant will be of great value to engineers in the industry **Modern Power Station Practice** British Electricity International, 1990 This is a practical work on the commissioning of power stations and aims to provide sufficient information for readers to adopt particular methods to their own situations Based on the many years commissioning experience of the authors the guide deals with the organisation and planning of commissioning pre steam to turbine commissioning the major plant areas and commissioning from steam to turbine through to post commissioning testing Once the plant is fully in service and tests completed it is still necessary to take the plant out of service occasionally for minor and major works This volume will still be useful for these activities and will provide a work of lasting value for those involved in station commissioning
