## **Modern Practical Ballistics:**

**Modern Practical Ballistics** Arthur J. Pejsa, 1989      *Practical Ballistics* Lewis Potter, 2014-05-31 This fascinating book starts with the basics going back to the days of muzzle loading before considering the various attempts made over the centuries to improve the bullet. It moves on to examine the development of the cartridge right up to the present day and provides the reader with a clear understanding of the principles governing the bullet's flight. Topics covered include the factors that influence ballistic performance and accuracy: internal ballistics factors influencing performance whilst the bullet is still in the barrel and external ballistics factors affecting the bullet's flight when it leaves the barrel. Simple formulae are included to enhance the understanding of the principles involved. The book also describes a number of interesting experiments concerning performance and accuracy and presents the results. It aims to assist those enthusiasts who make their own bullets by analysing faults that have an impact on accuracy and covers both rifled firearms and smooth bore guns. Includes a glossary that incorporates rifle terminology and those terms specific to the shotgun and is superbly illustrated with over 100 colour photographs.      The Modern Rifle ... Jesse Randolph Bevis, John Alexander Donovan, 1917      **Exterior Ballistics with Applications** Gjergj Klimi, 2008-07-30 Exterior Ballistics with Applications: Skydiving, Parachute Fall, Flying Fragments presents a modern approach to introduce the basics of exterior ballistics and its methods from the simple ideal model of projectile motion to the automatic solution of the differential equations of projectile flight using PC programs. The book uses different approaches to solve the differential equations of projectile motion among them the Siacci method and the numerical methods. The results obtained through the integration of differential equations of projectile flight are mostly analytical formulas that describe the projectile trajectory and make the exterior ballistics a comprehensible science. The Differential Equations of Projectile Flight are also integrated numerically using some original PC programs that can be easily modified to be used in similar scenarios or other new ones and give the reader the possibility to solve a great variety of Exterior Ballistics problems. Exterior Ballistics with Applications can be considered as an interdisciplinary applied mathematics and physics manuscript for the vast mathematics and physics models and techniques employed. It is a great source for applications in physics, calculus, differential equations, numerical methods, and PC programming as well. The book is illustrated with about 140 solved examples related to different artillery and infantry firearms that demonstrate the use of formulas and the solution methods of ballistics to find the elements of projectile trajectories. Exterior Ballistics with Applications includes as well two interesting topics that can be considered as applications of exterior ballistics: 1. Skydiving and parachute falling related with the trajectory of a parachutist launched from a horizontally flying airplane with an undeployed parachute in different meteorological conditions and in presence of air resistance and wind. 2. The ballistics of projectile fragments that is an important element of Terminal Ballistics necessary to study the effectiveness of fragmentation ammunition on the personnel and objects and other problems related with the construction of fragmentation ammunition or

Cooper, James F. Newill, 2005 An analysis of the velocity time range equations for direct fire munitions has been performed The analysis characterizes these munitions in terms of three parameters muzzle velocity muzzle retardation or velocity fall off and a single parameter defining the shape of the drag curve Using firing tables drag data for a variety of munitions the expected range of values of the single parameter defining the shape of the drag curve in the supersonic flight regime has been determined From the simplified analysis many important flight characteristics can be determined These include the velocity time range relationships change in impact velocity due to change in muzzle velocity gravity drop change in impact location due to muzzle velocity and muzzle retardation variability and crosswind deflection The analysis shows that the muzzle velocity and muzzle retardation are the dominant terms defining these relationships The shape of the drag curve is shown to be a higher order effect which in some cases can be neglected To validate these relationships comparisons are made with numerical trajectory predictions for fielded direct fire munitions using the measured drag data      **A Sniper's Guide to Long Range Shooting** Glen Roberts, 2024-06-14 A Sniper's Guide to Long Range Shooting is a collection of insider knowledge and skills from author Glen Roberts's career in police special operations sniping and his long range shooting training business It all started at the age of eighteen with learning long range variables with a custom 243Win using DOS matrix computer technology and handwritten range cards Over the years target engagements by first rate military snipers worldwide have doubled and the effective range of police special operations snipers has quadrupled An easy to use guide for novices and experienced professionals alike A Sniper's Guide to Long Range Shooting contains a methodical approach to everything you need to know about long range shooting including the latest advancements in shooting equipment optics laser technology and trajectory mapping software Including a wealth of helpful images carefully illustrated instructional diagrams detailed tables and helpful FAQ topics include the fundamentals of shooting shooting positions shooting styles wind effects projectile designs telescopic sights projectile flight studies cartridge and rifle selection environmental effects long range shooting tools and equipment calibration      Exterior Ballistics with Applications George Klimi, 2008-07-30 Exterior Ballistics with Applications Skydiving Parachute Fall Flying Fragments presents a modern approach to introduce the basics of exterior ballistics and its methods from the simple ideal model of projectile motion to the automatic solution of the differential equations of projectile flight using PC programs The book uses different approaches to solve the differential equations of projectile motion among them the Siacci method and the numerical methods The results obtained through the integration of differential equations of projectile flight are mostly analytical formulas that describe the projectile trajectory and make the exterior ballistics a comprehensible science The Differential Equations of Projectile Flight are also integrated numerically

**The Structures of Practical Knowledge** Matteo Valleriani, 2017-02-20 The Structures of Practical Knowledge investigates the nature of practical knowledge why how when and by whom it is codified and once codified how this knowledge is structured The inquiry unfolds in a series of fifteen case studies which range in focus from early modern Italy to eighteenth century China At the heart of each study is a shared definition of practical knowledge that is knowledge needed to obtain a certain outcome whether that be an artistic or mechanical artifact a healing practice or a mathematical result While the content of practical knowledge is widely variable this study shows that all practical knowledge is formally equivalent in following a defined workflow as reflected in a construction procedure a recipe or an algorithm As explored in the volume s fifteen contributions there are three levels at which structures of practical knowledge may be understood and examined At the most immediate level there are the individual workflows that encompasses practical knowledge itself Probing further it is possible to examine the structure of practical knowledge as it is externalized and codified in texts drawings and artifacts

such as models Finally practical knowledge is also related to social structures which fundamentally determine its dissemination and evolution into new knowledge structures The social structures of professionals and institutions represent the critical means by which practical knowledge takes form These actors are the agents of codification and by means of selection appropriation investment and knowledge development they determine the formation of new structures of practical knowledge On a more abstract level the creation of new knowledge structures is understood as constituting the basis for the further development of scientific knowledge Rich in subject matter and incisive in the theory it lays out this volume represents an important contribution to the history of science and epistemology Individually the fifteen case studies encompassing the history of architecture mining brewing glass production printing ballistics mechanics cartography cosmology and astronomy are replete with original research and offer new insights into the history of science Taken together the contributions remodel historical epistemology as a whole elucidating the underlining knowledge structures that transcend disciplinary boundaries and that unite practitioners across time and space
