two stage approach first treats the basics of modulation and coding theory before highlighting how these concepts are defined and implemented in modern wireless communication systems Part 1 is devoted to the presentation of main L1 procedures and methods including modulation coding channel equalization and multiple access techniques In Part 2 the uses of these procedures and methods in the wide range of wireless communication standards including WLAN WiMax WCDMA HSPA LTE and cdma2000 are considered An essential study of the implementation of modulation and coding techniques in modern standards of wireless communication Bridges the gap between the modulation coding theory and the wireless communications standards material Divided into two parts to systematically tackle the topic the first part develops techniques which are then applied and tailored to real world systems in the second part Covers special aspects of coding theory and how these can be effectively applied to improve the performance of wireless communications systems

Analysis and Design of Communication Techniques in Spectrally Efficient Wireless Relaying Systems Jian Zhao, 2010 This dissertation studies the communication technologies in relaying systems with multiple antennas especially in the multiple input multiple output MIMO two way relaying systems Both information theoretic aspects and practical communication strategies are considered and analyzed For the information theoretic analysis an analytical framework for the coverage of MIMO relaying systems based on an outage capacity criterion is proposed For MIMO two way relaying systems different data combining schemes at the relay are compared based on their achievable rates In addition optimal time division TD strategies for MIMO two way decode and forward DF relaying systems are proposed and analyzed When the optimal TD strategies are applied the increase of the achievable rate regions in the system is significant compared to those using the equal TD strategy For the practical transmission schemes we propose the self interference SI aided channel estimation and data detection schemes for the broadcast phase of two way DF relaying systems Such schemes exploit the SI in two way DF relaying systems when the superposition coding SPC scheme is applied When the network coding scheme is applied in two way DF relaying systems we propose an asymmetric data rate transmission scheme that utilizes the known data bits at the receivers Such a scheme exploits the a priori known bits at the weak link receiver in the broadcast phase of two way relaying systems
