*Modern Radio Science 1999* M. A. Stuchly, 1999-09-14 This book contains fifteen chapters written by world leaders in various research areas in radio science Each chapter describes the most exciting and important scientific developments that have taken place during the last three years Fundamental information for a non specialist is provided to facilitate understanding and in addition the most current developments are highlighted Several chapters deal with issues of radio communication for example satellite communication mobile communication and associated measurements and discuss the resultant problems in electro magnetic spectrum congestion Three chapters outline closely associated issues namely new ways of modeling and designing systems components and antennas New developments and techniques are also covered in the scientific applications of radar radio astronomy and plasma waves In two chapters attention is devoted to quite different research issues at very low frequencies those of atmospheric noise and interference and the biological effects of power line electromagnetic fields

**Ultra-Wideband, Short-Pulse Electromagnetics 3** Carl E. Baumann, Lawrence Carin, Alexander P. Stone, 2013-04-17 The first two international conferences on Ultra Wideband UWB Short Pulse SP Electromagnetics were held at Polytechnic University Brooklyn New York in 1992 and 1994 Their purpose was to focus on advanced technologies for generating radiating and detecting UWB SP signals on mathematical methods their propagation and scattering and on current as well as potential future applications The success of these two conferences led to the desirability of scheduling a third conference Impetus was provided by the electromagnetics community and discussions led by Carl Baum and Larry Carin resulted in the suggestion that the UWB conferences be moved around say to government laboratories such as Phillips Laboratory Consequently the decision was made by the Permanent HPEM Committee to expand AMEREM 96 to include the Third Ultra Wide Band Short Pulse UWB SP 3 with the Third Unexploded Ordnance Detection and Range Remediation Conference UXO and the HPEMINEM Conference in Albuquerque New Mexico during the period May 27 31 1996 Planning is now underway for EUROEM 98 in June 1998 in Tel Aviv Israel Joseph Shiloh is the conference chairman A fourth UWB SP meeting is planned as a part of this conference and Ehud Heyman will coordinate this part of the meeting The papers which appear in this volume the third in the UWB SP series update subject areas from the earlier UWB SP conferences These topics include pulse generation and detection antennas pulse propagation scattering theory signal processing broadband electronic systems and buried targets

Laboratory Astrophysics and Space Research P. Ehrenfreund, C. Krafft, H. Kochan, Valerio Pirronello, 2012-12-06 The book presents the most recent developments of laboratory studies in astrophysics and space research The individual chapters review laboratory investigations under simulated space conditions studies for the design of successful space experiments or for supporting the interpretation of astronomical and space mission recorded data Related theoretical models numerical simulations and in situ observations demonstrate the necessity of experimental work on the

Earth's surface The expertise of the contributing scientists covers a broad spectrum and is included in general overviews from fundamental science to recent space technology The book intends to serve as a reference for researchers and graduate students on the most recent activities and results in laboratory astrophysics and to give reviews of their applications in astronomy planetology cosmochemistry space research and Solar System exploration Arctic Oceanography Walker O. Smith, Jr., Jacqueline M. Grebmeier, 1995-01-09 Published by the American Geophysical Union as part of the Coastal and Estuarine Studies Volume 49 The Arctic Ocean is the least understood ocean on Earth and yet its importance to the world's oceans and climate is immense For example it has been suggested that the Arctic is the region most likely to be affected by increased atmospheric temperatures which might occur as a result of anthropogenic releases of greenhouse gases It also plays a critical role in global oceanic circulation in that it modulates the formation of deep water in the North Atlantic via ice export Despite its pivotal role in global processes the Arctic remains poorly understood This volume is an attempt to highlight and synthesize some of the recent advances in our knowledge of Arctic oceanography and includes topics that will interest physical biological chemical and geological oceanographers as well as atmospheric scientists That the Arctic is so poorly known relative to other oceans is not surprising It is largely ice covered throughout the year with only some of its continental shelves becoming ice free in summer Its ice is mostly multi year and very thick making penetration into the deeper portions impossible except by the most powerful ice breakers However in recent years new technologies have been applied to the Arctic and our understanding of the physical chemical biological and geological processes which occur within it is rapidly increasing Satellite sensors observe the Arctic continually allowing us to follow ice circulation storms and openings in the pack ice that had never been observed previously Moorings ships and buoys now can withstand many of the rigors of the Arctic and observations of the water column and seabed are becoming more common Finally because of its importance to global processes studies of the Arctic are attracting scientists not only from Arctic nations but from nations around the world Arctic oceanography truly has become an international effort American Book Publishing Record Cumulative 1993 R R Bowker Publishing, 1994-03 Cited in BCL3 Sheehy and Walford Compiled from the 12 monthly issues of the ABPR this edition of the annual cumulation lists by Dewey sequence some 41 700 titles for books published or distributed in the US Entry information is derived from MARC II tapes and books submitted to R R Bowker in *Report UAG.*, 1995

**Ultra-Wideband, Short-Pulse Electromagnetics 5** Paul D. Smith, Shane R. Cloude, 2007-05-08 The fifth Conference on Ultra Wideband Short Pulse Electromagnetics was held in Scotland from 30 May to 2 June 2000 at the Edinburgh International Conference Centre It formed part of the EUROEM 2000 International Conference under the chairmanship of David Parkes DERA Malvern and Paul Smith University of Dundee It continued the series of international conferences that were held first at the Polytechnic University Brooklyn New York in 1992 and 1994 then in Albuquerque New Mexico in 1996 as part of AMEREM 96 and more recently in Tel Aviv Israel in 1998 as part of EUROEM 98 The purpose of these meetings is

to focus on advanced technologies for the generation radiation and detection of ultra wideband short pulse signals taking into account their propagation scattering from and coupling to targets of interest to report on developments in supporting mathematical and numerical methods and to describe current and potential future applications of the technology
