Modules Over Non Noetherian Domains:

Modules over Non-Noetherian Domains László Fuchs,Luigi Salce,2001 In this book the authors present both traditional and modern discoveries in the subject area concentrating on advanced aspects of the topic Existing material is studied in detail including finitely generated modules projective and injective modules and the theory of torsion and torsion free modules Some topics are treated from a new point of view Also included are areas not found in current texts for example pure injectivity divisible modules uniserial modules etc Special emphasis is given to results that are valid over arbitrary domains The authors concentrate on modules over valuation and Pr fer domains but also discuss Krull and Matlis domains h local reflexive and coherent domains The volume can serve as a standard reference book for specialists working in the area and also is a suitable text for advanced graduate algebra courses and seminars **Modules Over Non-Noetherian Domains** Lszl Fuchs,2014-06-06 The authors present both traditional and modern discoveries in the subject area concentrating on advanced aspects of the topic Existing material is studied in detail including finitely generated modules projective and injective modules and the theory of torsion and torsion free modules Some topics are treated from a new point of view Also included are areas generally not found in current texts for example pure injectivity divisible modules and uniserial modules Special emphasis is given to results that are valid over arbitrary domains *Rings, Modules, and Closure Operations* Jesse Elliott,2019-11-30 This book presents a systematic exposition of the various applications of closure operations in commutative and noncommutative algebra In addition to further advancing multiplicative ideal theory the book opens doors to the various uses of closure operations in the study of rings and modules with emphasis on commutative rings and ideals Several examples counterexamples and exercises further enrich the discussion and lend additional flexibility to the way in which the book is used i e monograph or textbook for advanced topics courses *Modules Over Discrete Valuation Domains* Piotr A. Krylov,Askar A. Tuganbaev,2008 In this book modules over a specific class of rings the discrete valuations domains are considered Such modules call for a special consideration since they have specific properties and play an important role in various areas of algebra especially of commutative algebra The text is accompanied by exercises historical remarks links to related fields and open problems It is useful for students graduates studying algebra young researchers and experts BOOK JACKET Abelian Groups, Rings, Modules, and Homological Algebra Pat Goeters,Overtoun M.G. Modules over Valuation Rings László Fuchs,Luigi Salce,1985-03-27 This book initiates a systematic in depth study of Modules Over Valuation Domains It introduces the theory of modules over commutative domains without finiteness conditions and examines frontiers of current research in modules over valuation domains It represents a unique effort to

combine ideas from abelian group theory in a large scale with powerful techniques developed in module theory This volume surveys the background material on valuation rings modules and homological algebra features new results for important classes of modules such as finitely generated divisible pure injective and projective dimension one never published before contains exercises and research problems offering guidance for independent and creative study and provides historical notes comments and an extensive bibliography Mathematicians and advanced graduate level mathematics students interested in module theory abelian group theory and commutative ring theory can stay abreast of the latest advances with Modules Over Valuation Domains Book jacket   **Foundations of Commutative Rings and Their Modules** Fanggui Wang,Hwankoo Kim,2024-09-02 This book provides an introduction to the foundations and recent developments in commutative algebra A look at the contents of the first five chapters shows that the topics covered are those usually found in any textbook on commutative algebra However this book differs significantly from most commutative algebra textbooks namely in its treatment of the Dedekind Mertens formula the small finitistic dimension of a ring Gorenstein rings valuation overrings the valuative dimension and the Nagata rings Chapter 6 goes on to present w modules over commutative rings as they are most commonly used in torsion theory and multiplicative ideal theory Chapter 7 deals with multiplicative ideal theory over integral domains Chapter 8 collects various results of pullbacks especially Milnor squares and D M constructions which are probably the most important example generating machines In Chapter 9 coherent rings of finite weak global dimensions are probed and the local ring of weak global dimension two is elaborated by combining homological tricks and methods of star operation theory Chapter 10 is devoted to the Grothendieck group of a commutative ring In particular the Bass Quillen problem is discussed Finally Chapter 11 introduces relative homological algebra especially where the related notions of integral domains appearing in classical ideal theory are defined and studied using the class of Gorenstein projective modules In Chapter 12 in this new edition properties of cotorsion theories are introduced and show for any cotorsion pair how to construct their homology theory Each section of the book is followed by a selection of exercises of varying difficulty This book appeals to a wide readership from graduate students to academic researchers interested in studying commutative algebra
    Modules over Discrete Valuation Rings Piotr A. Krylov,Askar A. Tuganbaev,2018-09-24 This book provides the first systematic treatment of modules over discrete valuation domains which play an important role in various areas of algebra especially in commutative algebra Many important results representing the state of the art are presented in the text along with interesting open problems This updated edition presents new approaches on p adic integers and modules and on the determinability of a module by its automorphism group Contents Preliminaries Basic facts Endomorphism rings of divisible and complete modules Representation of rings by endomorphism rings Torsion free modules Mixed modules Determinity of modules by their endomorphism rings Modules with many endomorphisms or automorphisms   *Multiplicative Ideal Theory in Commutative Algebra* James W. Robert Gilmer s numerous articles and books have had a tremendous impact on research in commutative algebra It is not an exaggeration to say that most articles published today in non Noetherian ring theory and some in Noetherian ring theory as well originated in a topic that Gilmer either initiated or enriched by his work This volume a tribute to his work consists of twenty four articles authored by Robert Gilmer s most prominent students and followers These articles combine surveys of past work by Gilmer and others recent results which have never before seen print open problems and extensive bibliographies In a concluding article Robert Gilmer points out directions for future research highlighting the open problems in the areas he considers of importance Robert Gilmer s article is followed by the complete list of his published works his mathematical genealogical tree information on the writing of his four books and reminiscences about Robert Gilmer s contributions to the stimulating research environment in commutative algebra at Florida State in the middle 1960s The entire collection provides an in depth overview of the topics of research in a significant and large area of commutative algebra **Rings, Modules and Representations** Viet Dung Nguyen,2009 The papers in this volume contain results in active research areas in the theory of rings and modules including non commutative and commutative ring theory module theory representation theory and coding theory **Approximations and Endomorphism Algebras of Modules** Rüdiger Göbel,Jan Trlifaj,2012-10-01 This second revised and substantially extended edition of Approximations and Endomorphism Algebras of Modules reflects both the depth and the width of recent developments in the area since the first edition appeared in 2006 The new division of the monograph into two volumes roughly corresponds to its two central topics approximation theory Volume 1 and realization theorems for modules Volume 2 It is a widely accepted fact that the category of all modules over a general associative ring is too complex to admit classification Unless the ring is of finite representation type we must limit attempts at classification to some restricted subcategories of modules The wild character of the category of all modules or of one of its subcategories C is often indicated by the presence of a realization theorem that is by the fact that any reasonable algebra is isomorphic to the endomorphism algebra of a module from C This results in the existence of pathological direct sum decompositions and these are generally viewed as obstacles to classification In order to overcome this problem the approximation theory of modules has been developed The idea here is to select suitable subcategories C whose modules can be classified and then to approximate arbitrary modules by those from C These approximations are neither unique nor functorial in general but there is a rich supply available appropriate to the requirements of various particular applications The authors bring the two theories together The first volume Approximations sets the scene in Part I by introducing the main classes of modules relevant here the S complete pure injective Mittag Leffler and slender modules Parts II and III of the first volume develop the key methods of approximation theory Some of the recent applications to the structure of modules are also presented here notably for tilting cotilting Baer and Mittag Leffler modules In the second volume Predictions further basic instruments are introduced the prediction principles and their applications to proving

realization theorems Moreover tools are developed there for answering problems motivated in algebraic topology The authors concentrate on the impossibility of classification for modules over general rings The wild character of many categories C of modules is documented here by the realization theorems that represent critical R algebras over commutative rings R as endomorphism algebras of modules from C The monograph starts from basic facts and gradually develops the theory towards its present frontiers It is suitable both for graduate students interested in algebra and for experts in module and representation theory   <u>Algebra and Related Topics with Applications</u> Mohammad Ashraf,Asma Ali,Vincenzo De Filippis,2022-11-30 This proceedings is a collection of research papers on algebra and related topics most of which were presented at the International Conference on Algebra and Related Topics with Applications ICARTA 19 held at the Department of Mathematics Aligarh Muslim University Aligarh India from 17 19 December 2019 It covers a wide range of topics on ring theory coding theory cryptography and graph theory In addition to highlighting the latest research being done in algebra the book also addresses the abundant topics of algebra particularly semigroups groups derivations in rings rings and modules group rings matrix algebra triangular algebra polynomial rings and lattice theory Apart from these topics the book also discusses applications in cryptology coding theory and graph theory   <u>Lifting Modules</u> John Clark,Christian Lomp,N. Vanaja,Robert Wisbauer,2008-08-17 Extending modules are generalizations of injective modules and dually lifting modules generalize projective supplemented modules There is a certain asymmetry in this duality While the theory of extending modules is well documented in monographs and text books the purpose of our monograph is to provide a thorough study of supplements and projectivity conditions needed to investigate classes of modules related to lifting modules The text begins with an introduction to small submodules the radical variations on projectivity and hollow dimension The subsequent chapters consider preradicals and torsion theories in particular related to small modules decompositions of modules including the exchange property and local semi T nilpotency supplements in modules with specific emphasis on semilocal endomorphism rings finishing with a long chapter on lifting modules leading up their use in the theory of perfect rings Harada rings and quasi Frobenius rings Most of the material in the monograph appears in book form for the first time The main text is augmented by a plentiful supply of exercises together with comments on further related material and on how the theory has evolved   **Abelian Groups, Rings and Modules** Andrei V. Kelarev,2001 This volume presents the proceedings from the conference on Abelian Groups Rings and Modules AGRAM held at the University of Western Australia Perth Included are articles based on talks given at the conference as well as a few specially invited papers The proceedings were dedicated to Professor L szl Fuchs The book includes a tribute and a review of his work by his long time collaborator Professor Luigi Salce Four surveys from leading experts follow Professor Salce s article They present recent results from active research areas   <u>Algebras, Rings And Their Representations - Proceedings Of The International Conference On Algebras, Modules And Rings</u> Alberto Facchini,Kent Fuller,Claus M Ringel,Catarina Santa-clara,2006-02-20 Surveying the

most influential developments in the field this proceedings reviews the latest research on algebras and their representations commutative and non commutative rings modules conformal algebras and torsion theories The volume collects stimulating discussions from world renowned names including Tsit Yuen Lam Larry Levy Barbara Osofsky and Patrick Smith **Algebra and Its Applications** Dinh Van Huynh,Surender Kumar Jain,Sergio R. López-Permouth,2000 Among all areas of mathematics algebra is one of the best suited to find applications within the frame of our booming technological society The thirty eight articles in this volume encompass the proceedings of the International Conference on Algebra and Its Applications Athens OH 1999 which explored the applications and interplay among the disciplines of ring theory linear algebra and coding theory The presentations collected here reflect the dialogue between mathematicians involved in theoretical aspects of algebra and mathematicians involved in solving problems where state of the art research tools may be used and applied This Contemporary Mathematics series volume communicates the potential for collaboration among those interested in exploring the wealth of applications for abstract algebra in fields such as information and coding The expository papers would serve well as supplemental reading in graduate seminars **Categorical, Homological and Combinatorial Methods in Algebra** Ashish K. Srivastava,André Leroy,Ivo Herzog,Pedro A. Guil Asensio,2020-06-23 This book contains the proceedings of the AMS Special Session in honor of S K Jain s 80th birthday on Categorical Homological and Combinatorial Methods in Algebra held from March 16 18 2018 at Ohio State University Columbus Ohio The articles contained in this volume aim to showcase the current state of art in categorical homological and combinatorial aspects of algebra **Recent Progress in Ring and Factorization Theory** Matej Brešar,Alfred Geroldinger,Bruce Olberding,Daniel Smertnig,2025-06-11 This proceedings volume gathers a selection of cutting edge research in both commutative and non commutative ring theory and factorization theory The papers were presented at the Conference on Rings and Factorization held at the University of Graz Austria July 10 14 2023 The volume covers a wide range of topics including multiplicative ideal theory Dedekind Pr fer Krull and Mori rings non commutative rings and algebras rings of integer valued polynomials topological aspects in ring theory factorization theory in rings and semigroups and direct sum decomposition of modules The conference also featured two special sessions dedicated to Matej Bre ar and Sophie Frisch on the occasion of their 60th birthdays This volume is aimed at graduate students and researchers in these areas as well as related fields and provides new insights into both classical and contemporary research in ring and factorization theory **Slenderness** Radoslav Milan Dimitric,Radoslav Dimitric,2019 A leading expert presents a unified concept of slenderness in Abelian categories with numerous open problems and exercises **Commutative Algebra and its Applications** Marco Fontana,Salah-Eddine Kabbaj,Bruce Olberding,Irena Swanson,2009-09-04 This volume contains selected refereed papers based on lectures presented at the Fifth International Fez Conference on Commutative Algebra and Applications that was held in Fez Morocco in June 2008 The volume represents new trends and areas of classical research within the field with contributions from many different countries In addition the

volume has as a special focus the research and influence of Alain Bouvier on commutative algebra over the past thirty years
