## **Moduli Of Vector Bundles:**

*Moduli of Vector Bundles* Masaki Maruyama, 1996-04-23 Contains papers presented at the 35th Taniguchi International Symposium held recently in Sanda and Kyoto Japan Details the latest developments concerning moduli spaces of vector bundles or instantons and their application Covers a broad array of topics in both differential and algebraic geometry

**Algebraic Stacks and Moduli of Vector Bundles** Frank Neumann, 2009 [Moduli Spaces and Vector Bundles](#) Steve Bradlow, 2009-05-21 Coverage includes foundational material as well as current research authored by top specialists within their fields

*Compact Moduli Spaces and Vector Bundles* Valery Alexeev, 2012 This book contains the proceedings of the conference on Compact Moduli and Vector Bundles held from October 21-24 2010 at the University of Georgia This book is a mix of survey papers and original research articles on two related subjects Compact Moduli spaces of algebraic varieties including of higher dimensional stable varieties and pairs and Vector Bundles on such compact moduli spaces including the conformal block bundles These bundles originated in the 1970s in physics the celebrated Verlinde formula computes their ranks Among the surveys are those that examine compact moduli spaces of surfaces of general type and others that concern the GIT constructions of log canonical models of moduli of stable curves The original research articles include among others papers on a formula for the Chern classes of conformal classes of conformal block bundles on the moduli spaces of stable curves on Looijenga's conjectures on algebraic and tropical Brill-Noether theory on Green's conjecture on rigid curves on moduli of curves and on Steiner surfaces

**Moduli Spaces and Vector Bundles—New Trends** Peter Gothen, Margarida Melo, Montserrat Teixidor i Bigas, 2024-07-18 This volume contains the proceedings of the VBAC 2022 Conference on Moduli Spaces and Vector Bundles New Trends held in honor of Peter Newstead's 80th birthday from July 25-29 2022 at the University of Warwick Coventry United Kingdom The papers focus on the theory of stability conditions in derived categories non-reductive geometric invariant theory Brill-Noether theory and Higgs bundles and character varieties The volume includes both survey and original research articles Most articles contain substantial background and will be helpful to both novices and experts

*Grassmannians, Moduli Spaces and Vector Bundles* David Ellwood, Emma Previato, 2011 This collection of cutting edge articles on vector bundles and related topics originated from a CMI workshop held in October 2006 that brought together a community indebted to the pioneering work of P. E. Newstead visiting the United States for the first time since the 1960s Moduli spaces of vector bundles were then in their infancy but are now as demonstrated by this volume a powerful tool in symplectic geometry number theory mathematical physics and algebraic geometry In fact the impetus for this volume was to offer a sample of the vital convergence of techniques and fundamental progress taking place in moduli spaces at the outset of the twenty-first century This volume contains contributions by J. E. Andersen and N. L. Gammelgaard Hitchin's projectively flat connection and Toeplitz operators M. Aprodu and G. Farkas moduli spaces D. Arcara and A. Bertram stability in higher dimension L. Jeffrey intersection cohomology J. Kamnitzer Langlands program M. Lieblich arithmetic aspects

P E Newstead coherent systems G Pareschi and M Popa linear series on Abelian varieties and M Teixidor i Bigas bundles over reducible curves These articles do require a working knowledge of algebraic geometry symplectic geometry and functional analysis but should appeal to practitioners in a diversity of fields No specialization should be necessary to appreciate the contributions or possibly to be stimulated to work in the various directions opened by these path blazing ideas to mention a few the Langlands program stability criteria for vector bundles over surfaces and threefolds linear series over abelian varieties and Brauer groups in relation to arithmetic properties of moduli spaces

**Lectures on Vector Bundles** J. Le Potier, 1997-01-28 This work consists of two sections on the moduli spaces of vector bundles The first part tackles the classification of vector bundles on algebraic curves The author also discusses the construction and elementary properties of the moduli spaces of stable bundles In particular Le Potier constructs Hilbert-Schottmann-Grothendieck schemes of vector bundles and treats Mumford's geometric invariant theory The second part centers on the structure of the moduli space of semistable sheaves on the projective plane The author sketches existence conditions for sheaves of given rank and Chern class and construction ideas in the general context of projective algebraic surfaces Professor Le Potier provides a treatment of vector bundles that will be welcomed by experienced algebraic geometers and novices alike

**Moduli of Vector Bundles on Non-compact Surfaces and Their Deformations** Severin Barmeier, 2018 *Vector Bundles on Complex Projective Spaces* Christian Okonek, Heinz Spindler, Michael Schneider, 2013-11-11 These lecture notes are intended as an introduction to the methods of classification of holomorphic vector bundles over projective algebraic manifolds  $X$  To be as concrete as possible we have mostly restricted ourselves to the case  $X = \mathbb{P}^n$  According to Serre GAGA the classification of holomorphic vector bundles is equivalent to the classification of algebraic vector bundles Here we have used almost exclusively the language of analytic geometry The book is intended for students who have a basic knowledge of analytic and or algebraic geometry Some fundamental results from these fields are summarized at the beginning One of the authors gave a survey in the Seminaire Bourbaki 1978 on the current state of the classification of holomorphic vector bundles over  $\mathbb{P}^n$  This lecture then served as the basis for a course of lectures in Gottingen in the Winter Semester 78-79 The present work is an extended and up dated exposition of that course Because of the introductory nature of this book we have had to leave out some difficult topics such as the restriction theorem of Barth As compensation we have appended to each section a paragraph in which historical remarks are made further results indicated and unsolved problems presented The book is divided into two chapters Each chapter is subdivided into several sections which in turn are made up of a number of paragraphs Each section is preceded by a short description of its contents

Spaces of Vector Bundles on Threefolds, Surfaces and Curves I Andrej N. Tjurin, 1990      *Proceedings of the International Congress of Mathematicians* S.D. Chatterji, 2012-12-06 Since the first ICM was held in Zürich in 1897 it has become the pinnacle of mathematical gatherings. It aims at giving an overview of the current state of different branches of mathematics and its applications as well as an insight into the treatment of special problems of exceptional importance. The proceedings of the ICMs have provided a rich chronology of mathematical development in all its branches and a unique documentation of contemporary research. They form an indispensable part of every mathematical library. The Proceedings of the International Congress of Mathematicians 1994 held in Zürich from August 3rd to 11th 1994 are published in two volumes. Volume I contains an account of the organization of the Congress, the list of ordinary members, the reports on the work of the Fields Medalists and the Nevanlinna Prize Winner, the plenary one hour addresses and the invited addresses presented at Section Meetings 1-6. Volume II contains the invited address for Section Meetings 7-19. A complete author index is included in both volumes. The content of these impressive two volumes sheds a certain light on the present state of mathematical sciences and anybody doing research in mathematics should look carefully at these Proceedings. For young people beginning research this is even more important so these are a must for any serious mathematics library. The graphical presentation is as always with Birkhäuser excellent. *Revue Roumaine de Mathématiques pures et Appliquées*      *Vector Bundles* Andrej N. Tjurin, 2008 This is the first volume of a three volume collection of Andrej Nikolaevich Tyurin's Selected Works. It includes his most interesting articles in the field of classical algebraic geometry written during his whole career from the 1960s. Most of these papers treat different problems of the theory of vector bundles on curves and higher dimensional algebraic varieties, a theory which is central to algebraic geometry and most of its applications.      *Algebraic Geometry Santa Cruz 1995* János Kollár, David R. Morrison, 1997      **Algebraic Geometry** Dr. B. Phalaksha Murthy, Dr. P. Somashekhar, Prof. P. Somashekar, 2024-09-20 Algebraic Geometry is a profound exploration of the intersection between algebra and geometry, delving into the study of geometric structures defined by polynomial equations. This book covers foundational topics such as varieties, schemes, and morphisms, bridging abstract algebraic theories with tangible geometric interpretations. Through rigorous proofs and illustrative examples, it guides readers from basic concepts to advanced topics including cohomology, intersection theory, and moduli spaces. Ideal for mathematicians and students, Algebraic Geometry serves both as a comprehensive introduction and as a reference for deeper mathematical inquiries in geometry.      **Homological Mirror Symmetry and Tropical Geometry** Ricardo Castano-Bernard, Fabrizio Catanese, Maxim Kontsevich, Tony Pantev, Yan Soibelman, Ilia Zharkov, 2014-10-07 The relationship between Tropical Geometry and Mirror Symmetry goes back to the work of Kontsevich and Y. Soibelman in 2000, who applied methods of non-archimedean geometry in particular tropical curves to Homological Mirror Symmetry. In combination with the subsequent work of Mikhalkin on the tropical approach to Gromov-Witten theory and the work of Gross and Siebert, Tropical Geometry has now become a powerful tool. Homological Mirror Symmetry is the area of mathematics

concentrated around several categorical equivalences connecting symplectic and holomorphic or algebraic geometry. The central ideas first appeared in the work of Maxim Kontsevich 1993. Roughly speaking, the subject can be approached in two ways: either one uses Lagrangian torus fibrations of Calabi-Yau manifolds (the so-called Strominger-Yau-Zaslow picture further developed by Kontsevich and Soibelman) or one uses Lefschetz fibrations of symplectic manifolds suggested by Kontsevich and further developed by Seidel. Tropical Geometry studies piecewise linear objects which appear as degenerations of the corresponding algebro-geometric objects.

Daqian Li, 1997. This volume is published in honor of Professor Gu Chaohao, a renowned mathematician and member of the Chinese Academy of Sciences, on the occasion of his 70th birthday and his 50th year of educational work. The subjects covered by this collection are closely related to differential geometry, partial differential equations, and mathematical physics, the major areas in which Professor Gu has received notable achievements. Many distinguished mathematicians all over the world contributed their papers to this collection. This collection also consists of Gu Chaohao and I written by C. N. Yang. The academic career and accomplishment of Professor Gu Chaohao by T. T. Li and List of publications of Professor Gu Chaohao.
