**Molecular Applications of Quantum Defect Theory** Ch Jungen, 2019-01-22 As a consequence of new experimental techniques in optical and collision physics such as multiphoton excitation and VUV radiation generation quantum defect theory QDT has become more widely used as a theoretical tool for experimentalists Drawing together a historical body of work that contains key research and review papers Molecular Applica Advances in Atomic and Molecular Physics, 1985-11-08 *Advances in Atomic and Molecular Physics* *R-Matrix Theory of Atomic Collisions* Philip George Burke, 2011-03-28 Commencing with a self contained overview of atomic collision theory this monograph presents recent developments of R matrix theory and its applications to a wide range of atomic molecular and optical processes These developments include the electron and photon collisions with atoms ions and molecules which are required in the analysis of laboratory and astrophysical plasmas multiphoton processes required in the analysis of superintense laser interactions with atoms and molecules and positron collisions with atoms and molecules required in antimatter studies of scientific and technological importance Basic mathematical results and general and widely used R matrix computer programs are summarized in the appendices **NBS Special Publication**, 1968 **Publications** United States. **Publications of the National Bureau of Standards ... Catalog** United States. National Bureau of Standards, 1980 Publications of the National Institute of Standards and Technology ... Catalog National Institute of Standards and Technology (U.S.), 1981 Fundamental Processes of Atomic Dynamics J.S.S. Briggs, H. Kleinpoppen, H.O. Lutz, 2012-12-06 This volume contains the lectures presented at the NATO Advanced study Institute Fundamental Processes of Atomic Dynamics held in Maratea Italy from September 20th to October 2nd 1987 The institute and this volume were conceived as a natural complement to previous institutes held in Maratea 1982 and in Santa Flavia 1984 whose proceedings are to be found in NATO ASI Series B vol 103 and 134 respectively The subject matter of these institutes was the study of the fundamental processes occurring in the interactions of atoms with photons electrons and heavy ions The aim has been to unify these processes in a coherent experimental and theoretical approach The present volume brings this approach up to date and contains in addition for contrast and variety a description of similar dynamical processes in the study of clusters and surfaces The institute was opened with a lecture by Joe Macek in which he summarised the current status of atomic collision research propounded the philosophy of a unified approach to structure fragmentation and collision and posed the outstanding questions in the field This lecture forms the introduction to this volume The subject matter was divided into experiment and theory with the lectures inter linked so that the one could reinforce the other The whole of the theoretical part of the institute was organised by Ugo Fano as an ongoing symposium **Theory of Molecular Rydberg States** M. S. Child, 2011-08-11 Molecular Rydberg states have many unusual properties lending themselves to a diverse range of

experimental applications This book is designed to unravel the mysteries of molecular Rydberg states that lie beyond the scope of accepted spectroscopic theories It is the first single authored text to focus on the application of multi channel quantum defect theory MQDT and ab initio theory to this special class of molecular systems introducing readers to novel theoretical techniques The scattering techniques of MQDT are examined along with a unified description of bound states and fragmentation dynamics Connections with established spectroscopic theory are also described The book concludes with an account of the spherical tensor and density matrix theories required for the interpretation of multi photon experiments While the main text focuses on physical principles and experimental applications appendices are used to handle advanced mathematical detail This is a valuable resource for researchers in chemical atomic and molecular physics

**Dissociative Recombination: Theory, Experiments And Applications Iv** Mats Larsson, James Brian Alexander Mitchell, I F Schneider, 2000-01-21

Dissociative recombination is a complex molecular process that occurs in any plasma cold enough to contain molecular constituents It is the dominant recombination process in planetary ionospheres and interstellar clouds In this book recent developments in the fields of molecular ion physics atomic and molecular theory astrochemistry aeronomy and plasma physics are discussed

Handbook of High-resolution Spectroscopy Martin Quack, Frederic Merkt, 2011-09-26 The field of High Resolution Spectroscopy has been considerably extended and even redefined in some areas Combining the knowledge of spectroscopy laser technology chemical computation and experiments Handbook of High Resolution Spectroscopy provides a comprehensive survey of the whole field as it presents itself today with emphasis on the recent developments This essential handbook for advanced research students graduate students and researchers takes a systematic approach through the range of wavelengths and includes the latest advances in experiment and theory that will help and guide future applications The first comprehensive survey in high resolution molecular spectroscopy for over 15 years Brings together the knowledge of spectroscopy laser technology chemical computation and experiments Brings the reader up to date with the many advances that have been made in recent times Takes the reader through the range of wavelengths covering all possible techniques such as Microwave Spectroscopy Infrared Spectroscopy Raman Spectroscopy VIS UV and VUV Combines theoretical computational and experimental aspects Has numerous applications in a wide range of scientific domains Edited by two leaders in this field Provides an overview of rotational vibration electronic and photoelectron spectroscopy Volume 1 Introduction Fundamentals of Molecular Spectroscopy Volume 2 High Resolution Molecular Spectroscopy Methods and Results Volume 3 Special Methods Applications
