Dean,R.A. Lewis,2007-05-08 High throughput screening and combinatorial chemistry are two of the most potent weapons ever to have been used in the discovery of new drugs At a stroke it seems to be possible to synthesise more molecules in a month than have previously been made in the whole of the distinguished history of organic chemistry Furthermore all the molecules can be screened in the same short period However like any weapons of immense power these techniques must be used with care to achieve maximum impact The costs of implementing and running high throughput screening and combinatorial chemistry are high as large dedicated facilities must be built and staffed In addition the sheer number of chemical leads generated may overwhelm the lead optimisation teams in a hail of friendly fire Mother nature has not entirely surrendered as the number of building blocks that could be used to build libraries would require more atoms than there are in the universe In addition the progress made by the Human Genome Project has uncovered many proteins with different functions but related binding sites creating issues of

Modern Methods of Drug Discovery Alexander Hillisch, Rolf Hilgenfeld, 2012-11-28 Research in the pharmaceutical industry today is in many respects quite different from what it used to be only fifteen years ago There have been dramatic changes in approaches for identifying new chemical entities with a desired biological activity While chemical modification of existing leads was the most important approach in the 1970s and 1980s high throughput screening and structure based design are now major players among a multitude of methods used in drug discovery Quite often companies favor one of these relatively new approaches over the other e.g screening over rational design or vice versa but we believe that an intelligent and concerted use of several or all methods currently available to drug discovery will be more successful in the

medium term What has changed most significantly in the past few years is the time available for identifying new chemical entities Because of the high costs of drug discovery projects pressure for maximum success in the shortest possible time is higher than ever In addition the multidisciplinary character of the field is much more pronounced today than it used to be As a consequence researchers and project managers in the pharmaceutical industry should have a solid knowledge of the more important methods available to drug discovery because it is the rapidly and intelligently combined use of these which will determine the success or failure of preclinical projects
