The distinction between molecular immunology and immunobiology is necessarily arbitrary The most rapid progress is usually made in the blurred area between the two when the chemist is aware of the full significance of the biological problems and the biologist is alert to the contribution that a knowledge of molecular structure can be made to their solution The range of scientific disciplines able to contribute to research in immunology which this approach brings is reflected in the present volume Protein chemists worked out the arrangement of the polypeptide chains and the amino acid sequences of antibodies and X-ray crystallographers the three-dimensional structure but more precise definition of the amino acid side chain positions in the combining site is required for an understanding of the subtleties of antibody specificity That this can be achieved with physical techniques such as nuclear magnetic resonance has been shown by R A Dwek and in his chapter he summarizes these results with a minimum of technical detail The immune response has been shown to be dependent on complex cellular interactions and further progress will be facilitated by investigation of the molecular basis of these interactions This necessitates study of the structure and organization of the molecules in the surfaces of lymphocytes and other cells

During the past three decades the sugar moiety of complex carbohydrates has been found to be involved in important interactions of immunological specificity of antigens and to participate in a variety of cellular functions The long polysaccharide side chains of the lipopolysaccharides on the outer membrane of Gram negative organisms provide surface antigens for differential serodiagnosis Bacterial surface lectins are important in mediating the attachment of bacteria to host cells in the of infectious diseases The carbohydrate pathogenesis moieties of cell surface glycoconjugates glycoproteins and glycolipids of mammals are the sites for intercellular recognition and for the regulatory molecular interactions such as interaction of complex carbohydrate with hormones or hepatic lectins The carbohydrate side chains of many complex carbohydrates play essential roles as antigenic determinants b of human blood group ABH Lea Le I and i activities as the Forssman specific determinant and as tumor associated antigenic determinants Prompted by these and other advances in the field a Symposium on Molecular Immunology of Complex Carbohydrates was organized as a satellite meeting of the 8th International Glycoconjugate Conference held on September 8 13 1985 in Houston Texas U S A Many eminent scientists contributed their knowledge at this meeting The lecture and poster materials of the symposium are contained in this proceeding book which is divided into four Sections and one Appendix Section I is entitled Antibody Specificity Epitope and Lectinology Dr Elvin A

*Contemporary Topics in Molecular Immunology* F. P. Inman, W. J. Mandy, 2013-11-22

There are many unanswered questions regarding the molecular nature of antibodies components of complement and other substances which participate in the immune response The list of substances which need to be analyzed chemically is increasing Plasma cell products of course have long been of great interest because the most prevalent ones are immunoglobulins Other cell types however are the source of the broad spectrum of additional substances which classically fall into the sanctum of the molecular immunologist It is these substances and especially those more recently discovered which are responsible for the broadening investigative interests of immunologists In this volume we have provided you with descriptions of research being done with immunoglobulins and with complement Additionally we have included two reports that deal with molecules which are among the more recent acquisitions of the molecular immunologist The components of complement are known to react in a cascading manner which results in the lysis of cellular antigens The first step in the classical pathway requires the activation of C1 by the antibody antigen aggregates This volume of *Contemporary Topics in Molecular Immunology* begins with the report of Reid and Porter which describes their investigation of the mechanism of activation of C1 Their descriptions of C1q and of the reaction of C1 with immunoglobulins are especially intriguing It is clearly apparent from their report that activation of the components of complement is a complex phenomenon
