Molecular Mechanisms For Repair Of Dna Basic Life Sciences:

Molecular Mechanisms for Repair of DNA Philip Hanawalt, 2012-12-06 An age has passed in the 40 years since we first observed recovery from radiation damage in irradiated bacteria During the early 1930s we had been discussing the possibility of rapid changes after radiation exposure with Farring ton Daniels Benjamin Duggar John Curtis and others at the University of Wisconsin After working with living cells we had concluded that organisms receiving massive insults must have a wide variety of repair mechanisms available for restoration of at least some of the essential properties of the cell The problem was how to find and identify these recovery phenomena At that time I was working on a problem considered to be of great importance the existence of the so called mitogenetic rays Several hundred articles and a score of books had already appeared dealing with mitogenetic rays a type of radiation that was thought to exist in the shorter ultraviolet region Our search for mitogenetic rays necessitated the design of experiments of greatest sensitivity for the detection of ultraviolet It was vital that conditions be kept as constant as possible during exposure All the work was done at icewater temperature 3 5 C during and after exposure We knew that light was an important factor for cell recovery so all our experiments were done in dim light with the plated out cells being covered with dark cloth Our statements on the effect of visible light stimulated

Life Sciences and Radiation Jürgen Kiefer, 2011-06-27 Scope and ideas of the workshop The workshop which took place at the University of Giessen from Oct 3 to Oct 7 2002 and whose proceedings are collected in this volume started from the idea to convene a number of scientists with the aim to outline their visions for the future of radiation research on the basis of their expertise As radiation research is a very wide field restrictions were unavoidable It was decided to concentrate this time mainly on molecular and cellular biology because it was felt that here action is particularly needed This did not exclude contributions from neighbouring fields as may be seen from the table of contents It was clearly not planned to have a comprehensive account of the present scientific achievements but the results presented should only serve as a starting point for the discussion of future lines of research with the emphasis on the outreach to other parts of life sciences If you are interested in the future ask the young we attempted therefore to invite mainly younger colleagues with a few exceptions who had however already left their marks in the field They were asked to describe what they felt is important in radiation research and may have significant influences on other branches of life sciences They were given the task to demonstrate what is lost for science if we do no longer exist
