physics **Gas-Phase Reactions** V.N. Kondratiev, E.E. Nikitin, 2012-12-06 The present monograph appears after the death
of Professor V N Kondratiev one of those scientists who have greatly contributed to the foundation of contemporary gas
kinetics The most fundamental idea of chemical kinetics put forward at the beginning of the twentieth century and

connected with names such as W Nernst M Bodenstein N N Semenov and C N Hinshelwood was that the complex chemical reactions are in fact a manifestation of a set of simpler elementary reactions involving but a small number of species V N Kondratiev was one of the first to adopt this idea and to start investigations on the elementary chemical reactions proper These investigations revealed explicitly that every elementary reaction in turn consisted of many elementary events usually referred to as elementary processes It took some time to realize that an elementary reaction represented in a very simple way by a macroscopic kinetic equation can be described on a microscopic level by a generalized Boltzmann equation Nevertheless up to the middle of the twentieth century gas kinetics was mainly concerned with the interpretation of complex chemical reactions via a set of elementary reactions But later on the situation changed drastically First the conditions for reducing microscopic equations to macroscopic ones were clearly set up These are essentially based on the fact that the small perturbations of the Maxwell Boltzmann distribution are caused by the reaction proper
