Molecular Anatomy Of Cellular Systems:

Molecular Anatomy of Cellular Systems I. Endo, I. Yamaguchi, T. Kudo, H. Osada, T. Shibata, 2002-08-20 In this book the progress during the last ten years is reviewed and future plans outlined to realize and establish the concept of design in the biological sciences Design is a leading concept as well as the principal motivation for the creation of artificial systems A successful design generally requires that the structures and functions of the elements that constitute the system as well as the principles that determine how the elements cooperate together to create function be fully understood These requirements have not been satisfied within the fields of biotechnology and medicine Compared to the recent emergence of artificial systems living organisms acquired their present day structures and functions through evolution over three to four billion years Despite the fact that the design of living organisms is recorded in the DNA sequence our understanding of the structures and functions of the elements that constitute living organisms is very limited To fulfill the requirements the following approaches were initiated under a ten year project entitled Biodesign Research Firstly we tried to isolate and characterize the functional elements that constitute the organelles of various organisms Secondly we tried to reconstitute systems that reproduce biological functions in vitro from individual elements in order to understand how the elements cooperate together to yield a function Thirdly we attempted to resolve biological structures at various resolutions ranging from the atomic to the cellular level to further our knowledge about the fundamental principles that various functions at the molecular level and to design artificial systems

NADPH Oxidases Revisited: From Function to Structure Edgar Pick, 2023-06-22 This book provides a unique comprehensive and up to date overview of the various NADPH oxidases and narrates the history of their discovery biochemical characteristics genetics molecular structure and multiple functions in health and disease It covers the subject in a manner that serves both the expert and the novice researcher in the field The book starts with an overview of the major milestones in the discovery of the archetypical NADPH oxidase known as cytochrome b558 and its cytosolic regulators This is followed by personal recollections by pioneers of the field descriptions of the work of the major figures of the past by their followers and a rendering of the history of the discovery of the Nox family The central section of the book consists of chapters devoted specifically to an in depth description of the individual members of the Nox family and is followed by chapters focused on the modulators of their function A subsequent section comprises chapters dealing with methodologies of Nox research interaction with other proteins and Nox inhibitors A distinct section of the book deals with non mammalian Noxs from amoeba to zebrafish Subsequent chapters focus on Nox structure a field in which extraordinary progress was made in recent years The volume ends with chapters on Chronic Granulomatous Disease the consequence of Nox loss of function and its treatment by gene therapy The coda is a crystal ball perspective of the hopes for the clinical translation of basic Nox research Written for biochemists cell biologists molecular biologists and clinicians this book is aimed at both senior scientists and young investigators in the field

Fuel Cell Systems Explained Andrew L.

Dicks, David A. J. Rand, 2018-03-14 Since publication of the first edition of *Fuel Cell Systems Explained* three compelling drivers have supported the continuing development of fuel cell technology These are the need to maintain energy security in an energy hungry world the desire to move towards zero emission vehicles and power plants and the mitigation of climate change by lowering of CO₂ emissions New fuel cell materials enhanced stack performance and increased lifetimes are leading to the emergence of the first truly commercial systems in applications that range from fork lift trucks to power sources for mobile phone towers Leading vehicle manufacturers have embraced the use of electric drive trains and now see hydrogen fuel cells complementing advanced battery technology in zero emission vehicles After many decades of laboratory development a global but fragile fuel cell industry is bringing the first commercial products to market This thoroughly revised edition includes several new sections devoted to for example fuel cell characterisation improved materials for low temperature hydrogen and liquid fuelled systems and real world technology implementation Assuming no prior knowledge of fuel cell technology the third edition comprehensively brings together all of the key topics encompassed in this diverse field Practitioners researchers and students in electrical power chemical and automotive engineering will continue to benefit from this essential guide to the principles design and implementation of fuel cell systems [Subject Index of Current Research Grants and Contracts Administered by the National Heart, Lung and Blood Institute](#) National Heart, Lung, and Blood Institute, 1978 *Research Awards Index*, 1989 **Research Grants Index** National Institutes of Health (U.S.).
