## **Molecular And Cellular Biology Of The Allergic Response:**

Molecular and Cellular Biology of the Allergic Response Arnold I. Levinson, Yvonne Paterson, 1994-04-19 Providing a thorough overview of the fundamental elements of the human allergic immune response this up to date reference focuses on the unique molecular and cellular features of the IgE mediated immune response relating these features to current knowledge of the immune response to protein antigens Written by over 20 internationally renowned experts Molecular and Cellular Biology of the Allergic Response describes T and B cell development and activation examines important genetic and structural features of the major histocompatibility complex details antigen processing and presentation explores the molecular and cellular biology of mast cells and basophils analyzes the processes underlying the synthesis of IgE in humans explains the cellular components and soluble factors that mediate IgE inflammation investigates the molecular characterization and immune recognition of allergenic peptides and more **IgE, Mast Cells and the Allergic Response**

Derek J. Chadwick, David Evered, Julie Whelan, 2008-04-30 Reviews recent basic research into IgE mast cells and the allergic response and the relevance of this work to human pathophysiology and discusses new methods of treatment This symposium is unique in the IgE field for its breadth of coverage and interdisciplinary nature and it shows the benefits from the current rapid expansion of knowledge in cell biology immunology and molecular genetics as well as the potential clinical significance of this research to clinical immunologists and allergologists **Cumulated Index Medicus**, 1993 **Biochemistry of the Acute Allergic Reactions**, 1981 Vols for 1971 consists of the proceedings of the 2d International Symposium on the Biochemistry of the Acute Allergic Reactions **Cytokines Regulating the Allergic Response** Clemens Sorg, 1989

**Biomedical Index to PHS-supported Research: pt. A. Subject access A-H**, 1992 *Parasites and Allergy* Monique Capron, François Trottein, 2006 The inverse correlation between allergic diseases and helminth infections has been debated for over 30 years It was initially assumed that the underlying mechanism is an imbalance between Th1 and Th2 responses

that as a result of reduced exposure to Th1 inducing infectious pathogens has tipped to allergic Th2 responses It has only recently been clearly demonstrated that helminth infections have negative effects on allergic disease manifestation This was shown to be consistent with the activity of regulatory cell populations which control the effector mechanisms of both Th1 and Th2 In this book international experts in the field discuss the various roles of the cell populations involved in allergic reactions and helminth infections such as regulatory T and B cells natural killer T cells mast cells and basophils Essential for specialists and students in the field the contributions to this volume pave the way to new directions of research for the successful immunization against helminths and the prevention of inflammatory responses in allergic and autoimmune diseases
