Molecular Biology Of Hla Class Ii Antigens:

Molecular Biology of HLA Class II Antigens Jack Silver,1990-02-28 This publication covers the recent veritable explosion in knowledge regarding the genetic organization structure and function of the HLA class II region It deals with the nature of diversity of HLA class II alleles the molecular basis of this diversity and the mechanisms by which HLA class II expression is regulated Also addressed is the relationship of class II polymorphism to susceptibility to autoimmune diseases such as rheumatoid arthritis insulin dependent diabetes mellitus and pemphigus vulgaris The book presents information on allele specific oligonucleotide ASO probes and their use in identifying susceptible individuals It includes chapters which describe how cells transfected with HLA class II genes can be used for functional analysis An appendix representing a compilation of all the known DR DQ sequences is included This serves as an excellent source of comparison of newly derived sequences This publication provides information on the enormous progress in the HLA field It is intended for both the established investigator and the beginner Molecular Biology of the Islets of Langerhans Hiroshi Okamoto,1990-02-22 The islets of Langerhans the primary source of hormone production in the pancreas have been the focus of research into the nature of diabetes for decades In recent years the molecular biology of this multiendocrine organ has been intensively investigated with a corresponding increase in our understanding of the normal and pathological functioning of islet cells

Modulation of MHC Antigen Expression and Disease G. Eric Blair, Craig R. Pringle, D. John Maudsley, 1995-11-09 The major histocompatibility complex MHC genes are involved in the immune system's response to tumor and infected cells and in generating an immune response This book brings together basic aspects of the regulation of MHC antigens with important clinical applications in viral infection viral oncology cancer biology and autoimmunity There is a strong emphasis on situations where MHC expression is modulated either stimulated or repressed The book's major themes are the mechanisms of MHC expression explored at several levels including the transcription and translation of MHC genes and the insertion of MHC protein molecules into plasma membranes the effect of cytokines on MHC expression both in the etiology of certain diseases and in possible immunotherapeutic approaches to disease and the use of gene therapy to modify MHC expression in cancer cells and thereby cause tumor rejection This book will be valuable to researchers and clinicians in molecular biology immunology oncology and virology The Thymus Eberhard Walter, Eberhard Willich, W. Richard Webb, 2012-12-06 Until the middle of the present century the morphology and function of the thymus were primarily of interest to those working in the fields of pathologic anatomy endocrinology and pediatrics However during recent decades careful and refined histologic studies of the organ have expanded our knowledge It now seems certain that the thymus plays a central role in the immune system and some of the substances produced by this organ are considered together under the collective term of thymic hormones

mones In clinical medicine in particular endocrinology and pediatrics as well as surgery and radiologic oncology the startling advances that have taken place in radiologic diagnostics with the advent of new imaging procedures such as computed tomography and magnetic resonance imaging have provided fresh impetus in the search for effective treatments for hyperplasia tumors and tumor like changes of the thymus Normal variants of the thymus which lies concealed within the anterior superior mediastinum have been recorded and pathologic changes such as primary or secondary tumors can now be analyzed and correctly diagnosed
