Molecular Dynamics And Spectroscopy By Stimulated Emission Pumping:

Molecular Dynamics and Spectroscopy by Stimulated Emission Pumping Hai-Lung Dai, Robert W. Field, 1995 Since the first stimulated emission pumping SEP experiments more than a decade ago this technique has proven powerful for studying vibrationally excited molecules SEP is now widely used by increasing numbers of research groups to investigate fundamental problems in spectroscopy intramolecular dynamics intermolecular interactions and even reactions SEP provides rotationally pre selected spectra of vibrationally highly excited molecules undergoing large amplitude motions A unique feature of SEP is the ability to access systematically a wide variety of extreme excitations localized in various parts of a molecule and to prepare populations in specific high vibrational levels SEP has made it possible to ask and answer specific questions about intramolecular vibrational redistribution and the role of vibrational excitation in chemical reactions

Spectra and Dynamics of Small Molecules Robert W. Field, 2015-04-23 These seven lectures are intended to serve as an introduction for beginning graduate students to the spectra of small molecules The author succeeds in illustrating the concepts by using language and metaphors that capture and elegantly convey simple insights into dynamics that lie beyond archival molecular constants The lectures can simultaneously be viewed as a collection of interlocking special topics that have fascinated the author and his students over the years Though neither a textbook nor a scholarly monograph the book provides an illuminating perspective that will benefit students and researchers alike *Attosecond Molecular Dynamics*
