**Molecular Orbital Calculations for Amino Acids and Peptides** Anne-Marie Sapse, 2012-12-06 This volume describes in detail the technique of molecular orbital calculations for biochemistry The level of presentation will be accessible to biochemists and biophysicists Amino Acids and Peptides J S Davies, 2007-10-31 Specialist Periodical Reports provide systematic and detailed review coverage of progress in the major areas of chemical research Written by experts in their specialist fields the series creates a unique service for the active research chemist supplying regular critical in depth accounts of progress in particular areas of chemistry For over 80 years the Royal Society of Chemistry and its predecessor the Chemical Society have been publishing reports charting developments in chemistry which originally took the form of Annual Reports However by 1967 the whole spectrum of chemistry could no longer be contained within one volume and the series Specialist Periodical Reports was born The Annual Reports themselves still existed but were divided into two and subsequently three volumes covering Inorganic Organic and Physical Chemistry For more general coverage of the highlights in chemistry they remain a must Since that time the SPR series has altered according to the fluctuating degree of activity in various fields of chemistry Some titles have remained unchanged while others have altered their emphasis along with their titles some have been combined under a new name whereas others have had to be discontinued The current list of Specialist Periodical Reports can be seen on the inside flap of this volume Molecular Orbital Calculations for Biological Systems Anne-Marie Sapse, 1998 Molecular Orbital Calculations for Biological Systems is a hands on guide to computational quantum chemistry and its applications in organic chemistry biochemistry and molecular biology With improvements in software molecular modeling techniques are now becoming widely available they are increasingly used to complement experimental results saving significant amounts of lab time Common applications include pharmaceutical research and development for example ab initio and semi empirical methods are playing important roles in peptide investigations and in drug design The opening chapters provide an introduction for the non quantum chemist to the basic quantum chemistry methods ab initio semi empirical and density functionals as well as to one of the main families of computer programs the Gaussian series The second part then describes current research which applies quantum chemistry methods to such biological systems as amino acids peptides and anti cancer drugs Throughout the authors seek to encourage biochemists to discover aspects of their own research which might benefit from computational work They also show that the methods are accessible to researchers from a wide range of mathematical backgrounds Combining concise introductions with practical advice this volume will be an invaluable tool for research on biological systems *Amino Acids, Peptides and Proteins* J H Jones, 2007-10-31 Specialist Periodical Reports provide systematic and detailed review coverage of progress in the major areas of chemical research Written by experts in their specialist fields the series creates a unique service for the active research chemist supplying regular critical in depth accounts of progress in particular areas of chemistry For over 80 years the Royal Society of

Chemistry and its predecessor the Chemical Society have been publishing reports charting developments in chemistry which originally took the form of Annual Reports. However by 1967 the whole spectrum of chemistry could no longer be contained within one volume and the series Specialist Periodical Reports was born. The Annual Reports themselves still existed but were divided into two and subsequently three volumes covering Inorganic, Organic and Physical Chemistry. For more general coverage of the highlights in chemistry they remain a must. Since that time the SPR series has altered according to the fluctuating degree of activity in various fields of chemistry. Some titles have remained unchanged while others have altered their emphasis along with their titles; some have been combined under a new name whereas others have had to be discontinued. The current list of Specialist Periodical Reports can be seen on the inside flap of this volume.

**Amino Acids, Peptides and Proteins** J S Davies, 2007-10-31. In an ever increasing domain of activity, Amino Acids, Peptides and Proteins provides an annual compilation of the world's research effort into this important area of biological chemistry. Volume 29 provides a review of literature published during 1996. Comprising a comprehensive review of significant developments at this biology/chemistry interface, each volume opens with an overview of amino acids and their applications. Work on peptides is reviewed over several chapters ranging from current trends in their synthesis and conformational and structural analysis to peptidomimetics and the discovery of peptide-related molecules in nature. The application of advanced techniques in structural elucidation is incorporated into all chapters, whilst periodic chapters on metal complexes of amino acids, peptides and beta lactams extend the scope of coverage. Efficient searching of specialist topics is facilitated by the sub-division of chapters into discrete subject areas, allowing annual trends to be monitored. All researchers in the pharmaceutical and allied industries and at the biology/chemistry interface in academia will find this an indispensable reference source.

In an ever increasing domain of activity, Amino Acids, Peptides and Proteins provides an annual compilation of the world's research effort into this important area of biological chemistry. Volume 33 provides a review of literature published during 2000. Comprising a comprehensive review of significant developments at this biology/chemistry interface, each volume opens with an overview of amino acids and their applications. **Hydrogen Bonding in Biological Structures** George A. Jeffrey, Wolfram Saenger, 2012-12-06 Hydrogen bonds are weak attractions with a binding strength less than one tenth that of a normal covalent bond However hydrogen bonds are of extraordinary importance without them all wooden structures would collapse cement would crumble oceans would vaporize and all living things would disintegrate into random dispersions of inert matter Hydrogen Bonding in Biological Structures is informative and eminently usable It is in a sense a Rosetta stone that unlocks a wealth of information from the language of crystallography and makes it accessible to all scientists From a book review of Kenneth M Harmon Science 1992
