Transputer Research and Applications 7 North American Transputer Users Group. Conference,1995 This work comprises the proceedings of the Transputer Research and Applications Conference held in Georgia from October 23rd to October 25th 1994 The conference is sponsored by the North American Transputer Users Group NATUG *Massively Parallel Processing Applications and Development* L. Dekker,W. Smit,J.C. Zuidervaat,2013-10-22 The contributions of a diverse selection of international hardware and software specialists are assimilated in this book s exploration of the development of massively parallel processing MPP The emphasis is placed on industrial applications and collaboration with users and suppliers from within the industrial community consolidates the scope of the publication From a practical point of view massively parallel data processing is a vital step to further innovation in all areas where large amounts of data must be processed in parallel or in a distributed manner e g fluid dynamics meteorology seismics molecular engineering image processing parallel data base processing MPP technology can make the speed of computation higher and substantially reduce the computational costs However to achieve these features the MPP software has to be developed further to create user friendly programming systems and to become transparent for present day computer software Application of novel electro optic components and devices is continuing and will be a key for much more general and powerful architectures Vanishing of communication hardware limitations will result in the elimination of programming bottlenecks in parallel data processing Standardization of the functional characteristics of a programming model of massively parallel computers will become established Then efficient programming environments can be developed The result will be a widespread use of massively parallel processing systems in many areas of application *Los Alamos Science* , **Euro-Par'98 Parallel Processing** David Pritchard,1998-08-19 *Proceedings Parallel Computing* *Portable Parallelization of Industrial Aerodynamic Applications (POPINDA)* Anton Schüller,2013-04-17 This book contains the main results of the German project POPINDA It surveys the state of the art of industrial aerodynamic design simulations on parallel systems POPINDA is an acronym for Portable Parallelization of Industrial Aerodynamic Applications This project started in late 1993 The research and

development work invested in POPINDA corresponds to about 12 scientists working full time for the three and a half years of the project POPINDA was funded by the German Federal Ministry for Education Science Research and Technology BMBF The central goals of POPINDA were to unify and parallelize the block structured aerodynamic flow codes of the German aircraft industry and to develop new algorithmic approaches to improve the efficiency and robustness of these programs The philosophy behind these goals is that challenging and important numerical applications such as the prediction of the 3D viscous flow around full aircraft in aerodynamic design can only be carried out successfully if the benefits of modern fast numerical solvers and parallel high performance computers are combined This combination is a *conditio sine qua non* if more complex applications such as aerodynamic design optimization or fluid structure interaction problems have to be solved When being solved in a standard industrial aerodynamic design process such more complex applications even require a substantial further reduction of computing times Parallel and vector computers on the one side and innovative numerical algorithms such as multigrid on the other have enabled impressive improvements in scientific computing in the last 15 years

representative approaches to software coherence maintenance including a number of related efforts in the performance evaluation field. The book presents a selection of 27 papers dealing with state of the art software solutions for cache coherence maintenance in shared memory multiprocessors. It begins with a set of four introductory readings that provides a brief overview of the cache coherence problem and introduces software solutions to the problem. The text defines and illustrates static and dynamic software schemes, techniques for modeling performance evaluation mechanisms and performance evaluation studies. The book is intended for the experienced reader in computer engineering but possibly a novice in the topic of cache coherence. It also provides an in depth understanding of the problem as well as a comprehensive overview for multicomputer designers, computer architects and compiler writers. In addition it is a software coherence reference handbook for advanced undergraduate and typical graduate students in multiprocessing and multiprogramming areas.

Euro-Par' 99 Parallel Processing Patrick Amestoy, Philippe Berger, Michel Daydé, Iain Duff, Valerie Frayssé, Luc Giraud, Daniel Ruiz, 1999-08-20. Euro Par is an international conference dedicated to the promotion and advancement of all aspects of parallel computing. The major themes can be divided into the broad categories of hardware, software, algorithms and applications for parallel computing. The objective of Euro Par is to provide a forum within which to promote the development of parallel computing both as an industrial technique and an academic discipline, extending the frontier of both the state of the art and the state of the practice. This is particularly important at a time when parallel computing is undergoing strong and sustained development and experiencing real industrial take up. The main audience for and participants in Euro Par are seen as researchers in academic departments, government laboratories and industrial organisations. Euro Par's objective is to become the primary choice of such professionals for the presentation of new results in their specific areas. Euro Par is also interested in applications which demonstrate the effectiveness of the main Euro Par themes. There is now a permanent Web site for the series: <http://brahms.fmi.uni-passau.de/ci/europar> where the history of the conference is described. Euro Par is now sponsored by the Association of Computer Machinery and the International Federation of Information Processing. Euro Par 99. The format of Euro Par 99 follows that of the past four conferences and consists of a number of topics each individually monitored by a committee of four. There were originally 23 topics for this year's conference. The call for papers attracted 343

submissions of which 188 were accepted Of the papers accepted 4 were judged as distinguished 111 as regular and 73 as short papers
