psychology From their various perspectives they made ambitious claims about the contributions that their emergent expertise made to the understanding of and intervention in human bio psycho social development The international movement that arose out of this catalyzed the institutionalization of new domains of knowledge including developmental and educational psychology special needs education and child psychiatry Science of the Child charts the evolution of the child science movement in Russia from the Crimean War to the Second World War It is the first comprehensive history in English of the rise and fall of this multidisciplinary field across the late Imperial and Soviet periods Drawing on ideas and concepts emanating from a variety of theoretical domains the study provides new insights into the concerns of Russia s professional intelligentsia with matters of biosocial reproduction and investigates the incorporation of scientific knowledge and professional expertise focused on child development into the making of the welfare warfare state in the rapidly changing political landscape of the early Soviet era
