Rethinking Environmental Protection:

Rethinking Environmental Protection Phillip F. Cramer, 2000-01-01 Despite widespread popular support for environmental action Phillip F Cramer argues that current U S environmental policy approaches fail to address the real threat of environmental insecurity Cramer traces this failure to a reluctance to recognize and address the interconnectedness of natural forces just as all elements within the environment are linked so too should our perspectives on and responses to environmental degradation be linked In this book Cramer provides an innovative holistic approach to environmental protection that incorporates the best lessons learned from the fields of biology ethics philosophy political science law ecology and international relations He especially advocates local action and providing illustrative examples demonstrates how local action around the world is most effective when carried out within a global framework that supports information dissemination and international coordination This book will energize to thought and action any scholar student or general reader concerned with environmental issues and our current trajectory toward environmental decay Rethinking Environmental Protection for the Twenty-first Century University of Chicago. Fiorino, 2006 Winner 2007 Louis Brownlow Award presented by the National Academy of Public Administration NAPA and 2006 Best Book in Environmental Management and Policy American Society for Public Administration Environmental regulation in the United States has succeeded to a certain extent in solving the problems it was designed to address air water and land are indisputably cleaner and in better condition than they would be without the environmental controls put in place since 1970 But Daniel Fiorino argues in *The New Environmental Regulation* that given recent environmental economic and social changes it is time for a new more effective model of environmental problem solving Fiorino provides a comprehensive but concise overview of U S environmental regulation its history its rationale and its application and offers recommendations for a more collaborative flexible and performance based alternative Traditional environmental regulation was based on the increasingly outdated assumption that environmental protection and business are irreversibly at odds The new environmental regulation Fiorino describes is based on performance rather than on a narrow definition of compliance and uses such policy instruments as market incentives and performance measurement It takes into consideration differences in the willingness and capabilities of different firms to meet their environmental obligations and it encourages innovation by allowing regulated industries especially the better performers more flexibility in how they achieve environmental goals Fiorino points to specific programs including the 33 50 Program innovative permitting and the use of covenants as environmental policy instruments in the Netherlands that have successfully pioneered these new strategies By bringing together such a wide range of research and real world examples Fiorino has created an invaluable resource for practitioners and scholars and an engaging text for environmental policy courses *Rethinking U.S. Environmental Protection Policy* Dennis A.
