**Phagocytosis of Dying Cells** Dmitri V. Krysko, Peter Vandenabeele, 2009-03-10 Phagocytosis has been at the forefront of cell biology for more than a century Initially phagocytosis which comes from Greek words meaning devouring cells was discovered in the late 19th century by Ilya Metchnikoff who was awarded together with Paul Ehrlich the Nobel Prize in Physiology and Medicine in 1908 in recognition of their work on immunity At that time Metchnikoff had already identified a function for phagocytes not only in host defense but also as scavengers of degenerating host cells during metamorphosis of tadpoles thus providing one of the first descriptions of apoptotic cell clearance by macrophages Kaufmann 2008 Since then much has been learned about phagocytosis and the previous several decades have witnessed outstanding progress in understanding the functions and the molecular mechanisms of phagocytosis Two main types of targets are cleared by phagocytosis microbial pathogens and dying cells Rapid recognition and clearance of dying cells by phagocytes plays a pivotal role in development maintenance of tissue homeostasis control of immune responses and resolution of inflammation Clearance of dying cells can be divided into several stages including sensing recognition binding and signaling internalization and immunological responses In this book our contributors address these different stages of dead cell clearance and examine how impaired clearance of dying cells may lead to human diseases We have attempted to provide sufficient cross referencing and indexing to enable the reader to easily locate the ideas elaborated in the different chapters

**Cardiac Imaging for Clinical Decision-Making** Francesco Nudi, Orazio Schillaci, Giuseppe Biondi-Zoccai, Ami E. Iskandrian, 2022-08-18 Performing any diagnostic test in medicine is always a matter of trying to get the condition of the patient diagnosed properly with the least effort exposure discomfort and at the same time with the lowest possible error probability Pre test probability is helpful but often imprecise effectively overestimating the patient s risk profile In a broader prevention objective the phases of a disease its onset progression and complications must be taken into account The negative predictive value which is so important has in turn its main limitation in identifying the healthy patient that is the one who does not belong to any cluster of patients in which we would act in terms of prevention In coronary syndromes the goal is instead to evaluate coronary heart disease from mild to more extensive and significant forms For this purpose it is necessary to use parameters that investigate different and complementary aspects stenosis ischemia the morphology of the atherosclerotic plaque metabolic processes in particular vitality and apoptosis the presence of inflammatory processes The possibility already present thanks to Hybrid Imaging of joining exams that study different aspects will allow the patient to be increasingly characterized not only from a diagnostic point of view but also from a prognostic and personalized therapeutic choice      **Aging** Michael Fossel, 2024-02-29 Aging How Aging Works How We Reverse Aging and Prospects for Curing
