Pimbert, 2011 Seeds and Synergies Yiching Song, Ronnie Vernooy, 2010 For resource poor farmers however such conditions simply don't exist **Search for New Genes** Benjamin Peary Pal, 2007 Contributed papers presented at the Symposium festschrift for Benjamin Peary Pal 1906-1989 Indian agricultural scientist **Plant Genetic Conservation** Nigel Maxted, Danny Hunter, Rodomiro Ortiz Ríos, 2020-09-10 Plant diversity sustains all animal life and the genetic diversity within plants underpins global food security This text provides a practical and theoretical introduction to the strategies and actions to adopt for conserving plant genetic variation as well as explaining how humans can exploit this diversity for sustainable development Notably readable it initially offers current knowledge on the characterization and evaluation of plant genetic resources The authors then discuss strategies from in situ and ex situ conservation to crop breeding exploring how these can be used to improve food security in the face of increasing agrobiodiversity loss human population growth and climate change Each chapter draws on examples from the literature or the authors research and includes further reading references Containing other useful features such as a glossary it is invaluable for professionals and undergraduate and graduate students in plant sciences ecology conservation genetics and natural resource management *Saving More Than Seeds* Catherine Phillips, 2016-04-01 *Saving More Than Seeds* advances understandings of seed people relations with particular focus on seed saving The practice of reusing and exchanging seeds provides foundation for food production and allows humans and seed to adapt together in dynamic socio-natural conditions But the practice and its practitioners are easily taken for granted even as they are threatened by neoliberalisation Combining original ethnographic research with investigation of an evolving corporate seed order this book reveals seed saving not only as it occurs in fields and gardens but also as it associates with genebanking genetic engineering intellectual property rights and agri-food regulations Drawing on diverse social sciences literatures Phillips illustrates ongoing practices of thinking feeling and acting with seeds raising questions about what seed people relations should accomplish and how different ways of relating might be pursued to change collective futures Organic Farming, Prototype for Sustainable Agriculture Stéphane Bellon, Servane Penvern, 2014-04-23 Stakeholders show a growing interest for organic food and farming OF F which becomes a societal component Rather than questioning whether OF F outperforms conventional agriculture or not the main question addressed in this book is how and in what conditions OF F may be considered as a prototype towards sustainable agriculture The book gathers 25 papers introduced in a first chapter The first section investigates OF F production processes and its capacity to benefit from the systems functioning to achieve higher self-sufficiency The second one proposes an overview of organic performances providing commodities and public goods The third one focuses on organics development pathways within agri-food systems and territories As well as a strong theoretical

component this book provides an overview of the new challenges for research and development It questions the benefits as well as knowledge gaps with a particular emphasis on bottlenecks and lock in effects at various levels

*The Custodians of Biodiversity* Manuel Ruiz, Ronnie Vernooy, 2012-03-15 Globally local and indigenous approaches to conserving biodiversity crop improvement and managing precious natural resources are under threat Many communities have to deal with biopiracy for example As well existing laws are usually unsuitable for protecting indigenous and traditional knowledge and for recognizing collective rights such as in cases of participatory plant breeding where farmers researchers and others join forces to improve existing crop varieties or develop new ones based on shared knowledge and resources This book addresses these issues It outlines the national and international policy processes that are currently underway to protect local genetic resources and related traditional knowledge and the challenges these initiatives have faced In particular these themes are addressed within the context of the Convention of Biological Diversity and the International Treaty on Plant Genetic Resources for Food and Agriculture The authors broaden the policy and legal debates beyond the sphere of policy experts to include the knowledge holders themselves These are the custodians of biodiversity farmers herders and fishers in local communities Their experience in sharing access and benefits to genetic resources is shown to be crucial for the development of effective national and international agreements The book presents and analyzes this experience including case studies from China Cuba Honduras Jordan Nepal Peru and Syria Copublished with the International Development Research Centre IDRC
