*Opening the Mind's Eye* Ian Robertson, 2007-04-01 Ian Robertson has always been fascinated by how the mind makes images for that awesome power directly and deeply affects our lives All of us visualize the world differently and how we do so dictates the way we feel remember and think and therefore our health memory and creativity In this lively accessible and fascinating book Robertson explains that most of us employ language as a basis for visualization In effect we think in words more than in images The result is an imbalance between the logical and the intuitive between imagery based thought and language based thought Opening the Mind's Eye is both an enlightening and stimulating explanation of how we see and a compelling argument for extending the mind's powers to improve the quality of our lives Like Daniel Goleman's Emotional Intelligence it combines insight and application

Know How Jason Stanley, 2011-08-25 The goal of inquiry is to acquire knowledge of truths about the world In this book Jason Stanley argues that knowing how to do something amounts to knowing a truth about the world When you learned how to swim what happened is that you learned some truths about swimming Knowledge of these truths is what gave you knowledge of how to swim Something similar occurred with every other activity that you now know how to do such as riding a bicycle or cooking a meal Of course when you learned how to swim you didn't learn just any truth about swimming You learned a special kind of truth about swimming one that answers the question How could you

swim Know How develops an account of the kinds of answers to questions knowledge of which explains skilled action Drawing on work in epistemology philosophy of mind ethics action theory philosophy of language linguistic semantics and cognitive neuroscience Stanley presents a powerful case that it is our success as inquirers that explains our capacity for skilful engagement with the world

**Phenomenology and The Ghost in The Machine: An Investigation into Wilfrid Sellars, Jean--Paul Sartre, Gilbert Ryle and The Concept of Mind** Timb Hoswell, 2016-12-12 Take a journey through Jean Paul Sartre s trans phenomena of consciousness into Gilbert Ryle s Linguistic Behaviourism and on to the outer reaches of Wilfrid Sellars Rylean ancestors and their Messianic Behaviourist Jones Phenomenology and the Ghost in the Machine begins by investigating a historical connection between Jean Paul Sartre and Gilbert Ryle The book exploits this connection to explore an attractive relationship between ordinary language and consciousness thus providing plenty of chances for readers to learn Sartre s phenomenology and Ryle s linguistic analysis of the mind along the way This work is a one way ticket to the outer reaches of the mind arguing that language is insufficient to ground a theory of mind because it fails to capture sublinguistic layers of thought Only a first person science exploring the nature of mind and heralded by a return to a Pre Fregeian Psychologism can penetrate these mysteries of thought

**The Mind's Eye** Jeffrey F. Hamburger, Anne-Marie Bouché, 2006 The Mind s Eye focuses on the relationships among art theology exegesis and literature issues long central to the study of medieval art yet ripe for reconsideration Essays by leading scholars from many fields examine the illustration of theological commentaries the use of images to expound or disseminate doctrine the role of images within theological discourse the development of doctrine in response to images and the place of vision and the

visual in theological thought At issue are the ways in which theologians responded to the images that we call art and in which images entered into dialogue with theological discourse In what ways could medieval art be construed as argumentative in structure as well as in function Are any of the modes of representation in medieval art analogous to those found in texts In what ways did images function as vehicles not merely vessels of meaning and signification To what extent can exegesis and other genres of theological discourse shed light on the form as well as the content and function of medieval images These are only some of the challenging questions posed by this unprecedented and interdisciplinary collection which provides a historical framework within which to reconsider the relationship between seeing and thinking perception and the imagination in the Middle Ages

**Empathy** Vanessa Lux, Sigrid Weigel, 2017-09-14 This book digs into the complex archaeology of empathy illuminating controversies epistemic problems and unanswered questions encapsulated within its cross disciplinary history The authors ask how a neutral innate capacity to directly understand the actions and feelings of others becomes charged with emotion and moral values associated with altruism or caregiving They explore how the discovery of the mirror neuron system and its interpretation as the neurobiological basis of empathy has stimulated such an enormous body of research and how in a number of these studies the moral values and social attitudes underlying empathy in human perception and action are conceptualized as universal traits It is argued that in the humanities the historical cultural and scientific genealogies of empathy and its forerunners such as Einfühlung have been shown to depend on historical preconditions cultural procedures and symbolic systems of production The multiple semantics of empathy and related concepts are discussed in the context of their cultural and historical foundations raising questions about these cross disciplinary constellations This volume will be of interest to scholars of psychology art history cultural research history of science literary studies neuroscience philosophy and psychoanalysis

**Believing and Seeing** Roland Recht,2008-10-15 Developments in medieval science that elevated sight above the other

senses found religious expression in the Christian emphasis on miracles relics and elaborate structures In his incisive survey of Gothic art and architecture Roland Recht argues that this preoccupation with vision as a key to religious knowledge profoundly affected a broad range of late medieval works In addition to the great cathedrals of France Recht explores key religious buildings throughout Europe to reveal how their grand designs supported this profusion of images that made visible the signs of scripture Metalworkers for example fashioned intricate monstrances and reliquaries for the presentation of sacred articles and technical advances in stained glass production allowed for more expressive renderings of holy objects Sculptors meanwhile created increasingly naturalistic works and painters used multihued palettes to enhance their subjects lifelike qualities Reimagining these works as a link between devotional practices in the late Middle Ages and contemporaneous theories that deemed vision the basis of empirical truth Recht provides students and scholars with a new and powerful lens through which to view Gothic art and architecture
