Jenkin, Laurence R. Harris, 2005-10-27 The world is divided into objects things that are distinct from their backgrounds and that can move or be moved Objects are food and prey and threats as well as neutral items and it is critical to be able to see them How the form of an object is distinguished is one of the most basic yet least understood topics of research in vision perception The object defining system needs to operate in the real world where objects and viewers move and where the scene is cluttered rarely offering a clear unobscured view of any object How are we able to see and define objects using the complex pattern of light falling on the retina An object becomes visible if it differs sufficiently from its surroundings in its luminance color texture motion or depth Although the processes that use these different cues are quite distinct research has shown that they share some organizational principles This book *Seeing Spatial Form* is dedicated to David Martin Regan who has made so many contributions to our understanding of how we see objects Its chapters bring together ideas from some of the world's leading researchers in form vision to explain what we know about distinguishing form The book includes a CD ROM which contains additional demonstrations and color images that considerably enhance the chapter contents *Seeing Spatial Form* will be an invaluable resource for student and professional researchers in vision science cognitive psychology and neuroscience **Seeing Space** Robert A. Crone, 2003-01-01 Spatial vision is a subject in which philosophy psychology ophthalmology neurophysiology and pathology meet It is the unique contribution of this book that gives a survey of the whole subject in historical perspective The author a former professor of ophthalmology at the University of Amsterdam is an authority in the field of binocular vision *Diplopia* 1973 and colour vision *History of Color* 1999 *Seeing Space* is written for ophthalmologists optometrists orthoptists and other practitioners of visual science but also for psychologists and anybody interested in the philosophy and science of perception The book contains three parts Part I contains chapters on objective and subjective space and on non visual space perception Part II begins with a short survey of the visual system As eye movements are of crucial importance in the perception of space the evolution of the eye and the eye movements is described There are chapters on the perception of direction stereoscopic depth and movement A sensorimotor theory of space perception is elaborated Part III is dedicated to the perception of objects There are chapters on the perception of contours surfaces dimensionality and size including the moon illusion Finally the problem of the relation between mind and matter is raised but not solved *Seeing More* Samantha Matherne, Gardner Cowles Associate Professor of the Humanities Samantha Matherne, 2024-07-19 There is a long standing tradition in philosophy that defines imagination as engaging with things that are not real or present as a kind of fantasy Immanuel Kant offered an original theory of imagination as something that shapes our encounters with what is real present and pervades our lives This book brings this theory of imagining to light **Space**

Narrative after Deconstruction Daniel Punday, 2012-02-01 Interrogating stories told about life after deconstruction and discovering instead a kind of afterlife of deconstruction Daniel Punday draws on a wide range of theorists to develop a rigorous theory of narrative as an alternative model for literary interpretation Drawing on an observation made by Jean-François Lyotard Punday argues that at the heart of narrative are concrete objects that can serve as lynchpins through which many different explanations and interpretations can come together Narrative after Deconstruction traces the often grudging emergence of a post deconstructive interest in

narrative throughout contemporary literary theory by examining critics as diverse as Jacques Derrida Gilles Deleuze Elizabeth Grosz and Edward Said Experimental novelists like Ronald Sukenick Raymond Federman Clarence Major and Kathy Acker likewise work through many of the same problems of constructing texts in the wake of deconstruction and so provide a glimpse of this post deconstructive narrative approach to writing and interpretation at its most accomplished and powerful

The Mind-Game Film Thomas Elsaesser,2021-03-28 This book represents the culmination of Thomas Elsaesser's intense and passionate thinking about the Hollywood mind game film from the previous two decades In order to answer what the mind game film is why they exist and how they function Elsaesser maps the industrial institutional challenges and constraints facing Hollywood and the broader philosophic horizon within which American cinema thrives today He demonstrates how the Persistence of Hollywood continues as it has adapted to include new twists and turns as well as revisions of past concerns as film moves through the 21st century Through examples such as *Minority Report* *Mulholland Drive* *Source Code* and *Back to the Future* Elsaesser explores how mind game films challenge us and play games with our perception of reality creating skepticism and self doubt He also highlights the mind game film's tendency to intervene in a complex fashion in the political moment by questioning the dominant power's intent to program both body and mind alike Prescient and compelling *The Mind Game Film* will appeal to students scholars and enthusiasts of media studies film studies philosophy and politics

Hubbard,2018-10-23 Synesthesia is a fascinating phenomenon which has captured the imagination of scientists and artists alike This title brings together a broad body of knowledge about this condition into one definitive state of the art handbook

The World of the Senses Rudolf Steiner,2014 In this concise series of lectures Rudolf Steiner shows how the human senses reveal the mysterious world of the will which is at once a spiritual and physical phenomenon The senses act as a portal connecting our physical and etheric bodies with what Steiner refers to as worlds of all pervading will and all pervading wisdom He elaborates this theme giving some unexpected and delightful insights into the senses of hearing and sight and in particular how we experience colour Steiner suggests that divine spiritual beings had different intentions for the formation of physical human beings but that adversary powers caused disruption leading to a more materialized constitution He describes disorders in the connections between the human physical etheric astral and ego bodies and the ill effects of one aspect overpowering the others He gives insight into human glandular secretions and why we need to eat and digest also connected to the intervention of adversary beings

Laws of Seeing Wolfgang Metzger,2009-08-21 The first English translation of a classic work in vision science from 1936 by a leading figure in the Gestalt movement covering topics that continue to be major issues in vision research today This classic work in vision science written by a leading figure in Germany's Gestalt movement in psychology and first published in 1936 addresses topics that remain of major interest to vision researchers today Wolfgang Metzger's main argument drawn from Gestalt theory is that the objects we perceive in visual experience are not the objects themselves but

perceptual effigies of those objects constructed by our brain according to natural rules Gestalt concepts are currently being increasingly integrated into mainstream neuroscience by researchers proposing network processing beyond the classical receptive field Metzger's discussion of such topics as ambiguous figures hidden forms camouflage shadows and depth and three dimensional representations in paintings will interest anyone working in the field of vision and perception including psychologists biologists neurophysiologists and researchers in computational vision and artists designers and philosophers Each chapter is accompanied by compelling visual demonstrations of the phenomena described the book includes 194 illustrations drawn from visual science art and everyday experience that invite readers to verify Metzger's observations for themselves Today's researchers may find themselves pondering the intriguing question of what effect Metzger's theories might have had on vision research if Laws of Seeing and its treasure trove of perceptual observations had been available to the English speaking world at the time of its writing

The Scope of Geography (RLE Social & Cultural Geography) Rhoads Murphey, 2014-01-23 This book introduces the beginning student to the major concepts materials and tools of the discipline of geography While it presents geographic theory as whole and for each of its parts the chief emphasis is on concrete analysis and example rather than on abstraction an approach which has proven more successful for undergraduate courses than those with a more heavily theoretical bias The text was extensively re-written for the third edition which enhanced its clarity and effectiveness with expanded cartographic coverage

Vision in 3D Environments Laurence R. Harris, Michael R. M. Jenkin, 2011-07-07 Biological and machine systems exist within a complex

and changing three dimensional world We appear to have no difficulty understanding this world but how do we go about forming a perceptual model of it Centred around three key themes depth processing and stereopsis motion and navigation in 3D and natural scene perception this volume explores the latest cutting edge research into the perception of three dimension environments It features contributions from top researchers in the field presenting both biological and computational perspectives Topics covered include binocular perception blur and perceived depth stereoscopic motion in depth and perceiving and remembering the shape of visual space This unique book will provide students and researchers with an overview of ongoing research as well as perspectives on future developments in the field Colour versions of a selection of the figures are available at www.cambridge.org 9781107001756 Semiparallel Submanifolds in Space Forms Ülo

Lumiste,2009-03-02 Quite simply this book offers the most comprehensive survey to date of the theory of semiparallel submanifolds It begins with the necessary background material detailing symmetric and semisymmetric Riemannian manifolds smooth manifolds in space forms and parallel submanifolds The book then introduces semiparallel submanifolds and gives some characterizations for their class as well as several subclasses The coverage moves on to discuss the concept of main symmetric orbit and presents all known results concerning umbilic like main symmetric orbits With more than 40 published papers under his belt on the subject Lumiste provides readers with the most authoritative treatment **Global Cities and Global Order** Simon Curtis,2016-11-17 The re emergence of the city from the long shadow of the state in the late twentieth century was facilitated by the state itself The unprecedented size and scale of today s global cities and mega cities owe their conditions of possibility to a fundamental shift in the character of political order at the level of the international system This book argues that we must understand the rise of the global city as part of a wider process of the transformation of international political order and of the character of international society Global cities are an inscription of the ideals of a market society in space constructed and defended at the level of international society They embody the ascendance of a set of liberal principles at a certain moment in history a moment related to the hegemonic status of leading states in the second half of the twentieth century and the ability of those states to shape international norms But the evolution of these urban forms has also reflected the tendency for deregulated markets to generate inequality and polarisation these features are also inscribed in the spaces of global cities Global cities focus and amplify the tensions and contradictions within the contemporary international system and become key strategic sites for struggles over social justice and the character of political life in the twenty first century Global Cities and Global Order demonstrates the significance of the re emergence of cities from the long shadow of the nation state is far reaching Only by examining the mechanisms by which cities have become empowered in the last few decades can we understand their new functions and capabilities in global politics

A Guide to Spatial History Konrad Lawson,Riccardo Bavaj,Bernhard Struck,2022-01-07 This guide provides an overview of the thematic areas analytical aspects and avenues of research which together form a broader conversation around doing spatial history Spatial history is not a field with clearly delineated boundaries For the most part it lacks a distinct unambiguous scholarly identity It can only be thought of in relation to other typically more established fields Indeed one of the most valuable utilities of spatial history is its capacity to facilitate conversations across those fields Consequently it must be discussed in relation to a variety of historiographical contexts Each of these have their own intellectual genealogies institutional settings and conceptual path dependencies With this in mind this guide surveys the following areas territoriality infrastructure and borders nature environment and landscape city and home social space and political protest spaces of knowledge spatial imaginaries cartographic representations and historical GIS research
