Thomas F. Heck, R. L. Erenstein, 1999 There has long been a need to introduce performing arts enthusiasts and students to the fascinating field of iconography both as manifested in art history and in its more pragmatic or applied forms Yet relatively little systematic effort has been made to collect and interpret centuries of such visual evidence in the light of the best available art historical information combined with corroborating textual documentation and insights from the histories of performance disciplines Aspiring iconographers of the performing arts need to be aware that there are often several levels of interpretation which great works of visual art will sustain This book explores these levels of interpretation a surface or literal reading a deeper reading of the work which seeks to enter the mind of the artist and asks how and why he put a given work together and the deepest reading of the work relating it to the artistic traditions and culture in which the artist lived In expounding on these levels of iconographic interpretations four discourses by scholars active in the study of visual records are given in relation to traditions techniques and trends performance in general Katritzky music Heck theatre Erenstein and

the historiography of Mannerism it scrutinises the influence that this view has had on aesthetic judgments over the past three centuries A perfect companion for anyone engaged with aesthetics this book offers a valuable contribution to the discussion surrounding the principles and values in art history

Raab, 2020-05-31 The Humanities in Transition explores how the basic components of the digital age will have an impact on the most trusted theories of humanists Over the past two generations humanists have come to take basic postmodern theories for granted whether on language knowledge or time Yet Michel Foucault Jacques Derrida and similar philosophers developed their ideas when the impact of this digital world could barely be imagined The digital world built on algorithms and massive amounts of data operates on radically different principles This volume analyzes these differences demonstrating where an aging postmodernism cannot keep pace with today's technologies The book first introduces the major influence postmodern had on global thought before turning to algorithms digital space digital time data visuals and the concept to digital forgeries By taking a closer look at these themes it establishes a platform to create more robust humanist theories for the third millennium This book will appeal to graduate students and established scholars in the Digital Humanities who are looking for diverse and energetic theoretical approaches that can truly come to terms with the digital world
