Modeling The Stellar Environment How And Why:

Modeling the Stellar Environment P. DELACHE (Ed), Institut d'Astrophysique, 1989 Introduction to Spectropolarimetry Jose Carlos del Toro Iniesta, 2003-03-06 Spectropolarimetry embraces the most complete and detailed measurement and analysis of light as well as its interaction with matter This book provides an introductory overview of the area which plays an increasingly important role in modern solar observations Chapters include a comprehensive description of the polarization state of polychromatic light and its measurement an overview of astronomical solar polarimetry the radiative transfer equation for polarized light and the formation of spectral lines in the presence of a magnetic field Most topics are dealt with within the realm of classical physics although a small amount of quantum mechanics is introduced where necessary This text will be a valuable reference for graduates and researchers in astrophysics solar physics and optics

Modeling the Stellar Environment Institut d'astrophysique (Paris, France), 1989 **Mechanisms of Chromospheric and Coronal Heating** Peter Ulmschneider, Eric R. Priest, Robert Rosner, 2013-06-29 One of the great problems of astrophysics is the unanswered question about the origin and mechanism of chromospheric and coronal heating Just how these outer stellar envelopes are heated is of fundamental importance since all stars have hot chromospheric and coronal shells where the temperature rises to millions of degrees comparable to the temperatures in the stars cores Here for the first time is a comprehensive inventory of the proposed chromospheric and coronal heating theories The proposed heating processes are critically compared and the observational evidence for the various mechanisms is reviewed This is essential reading for all those working in such fields as stellar activity radio and XUV emission rotation and mass loss for whom a detailed and consistent presentation of our knowledge of chromospheric and coronal heating mechanisms is urgently needed

International Aerospace Abstracts , 1998 **Polarimetry of Stars and Planetary Systems** Ludmilla Kolokolova, 2015-05-14 A comprehensive review of state of the art techniques models and research methods in modern astronomical polarimetry Evolution of Peculiar Red Giant Stars International Astronomical Union. Colloquium, 1989-06-22 Red giant stars are evolutionarily advanced objects in the closing stages of their nuclear burning lifetime Observed with increasing spectral coverage they display a variety of unusual phenomena Many are characterized by peculiar non solar surface chemical compositions which provide otherwise unobtainable clues to interior nucleosynthesis mixing and evolution Others may have received their chemical peculiarities by mass transfer from a companion This book reports on the proceedings of the International Astronomical Union Colloquium 106 It contains discussions on many aspects of these stars combining theory and observation to interpret these objects in terms of their evolutionary history There are 20 review papers 69 abstracts and short contributed papers and a complete transcript of the valuable summary panel discussion Professional astronomers will find this book useful as a reference work which incorporates current research on the modelling and evolution of these unstable stars Frontiers of Climate Modeling J. T. Kiehl, V. Ramanathan, 2011-06-30 The physics and

dynamics of the atmosphere and atmosphere ocean interactions provide the foundation of modern climate models upon which our understanding of the chemistry and biology of ocean and land surface processes are built Originally published in 2006 *Frontiers of Climate Modeling* captures developments in modeling the atmosphere and their implications for our understanding of climate change whether due to natural or anthropogenic causes Emphasis is on elucidating how greenhouse gases and aerosols are altering the radiative forcing of the climate system and the sensitivity of the system to such perturbations An expert team of authors address key aspects of the atmospheric greenhouse effect clouds aerosols atmospheric radiative transfer deep convection dynamics large scale ocean dynamics stratosphere troposphere interactions and coupled ocean atmosphere model development The book is an important reference for researchers and advanced students interested in the forces driving the climate system and how they are modeled by climate scientists **Angular**

Momentum Evolution of Young Stars S Catalano, J.R Stauffer, 2012-12-06 This book reports the Proceedings of the NATO Advanced Research Workshop on Angular Momentum Evolution of Young Stars held from 17 to 21 September 1990 at Noto Italy The workshop had its immediate origin in a discussion about the availability of stellar rotation data that took place in 1987 at Viana do Castelo Portugal during the NATO meeting Formation and Evolution of Low Mass Stars We recognized that nearly 20 years had passed since the last meeting on stellar rotation and that significant progress in the observation of rotation rates in low mass stars had been made During the last 20 years new efficient instrumentation CCD and photon counting detectors and echelle spectrographs and new analysis techniques profile Fourier analysis have allowed us to measure rotational velocities as low as 1.2 km/s and to reach low mass stars in young clusters Even with these advances rotational velocities of low mass stars would have remained challenging to determine if all single low mass stars later than G0 had rotational velocities of order or less than 10 km/sec Evidence that this is not always the case was first provided by the photometric variability data obtained by van Leeuwen and Alphenaar for K dwarfs in the Pleiades and more recently by the vsini measurements of low mass stars in several young clusters Scientific and Technical Aerospace Reports ,1994

Lists citations with abstracts for aerospace related reports obtained from world wide sources and announces documents that have recently been entered into the NASA Scientific and Technical Information Database
