Frank Pearce,Steve Tombs,2019-01-15 Originally published in 1998 While there is a growing academic literature on corporate crime much of this focuses upon variants of economic or financial crimes there is a relative absence of studies of safety health and or environmental crimes This is curious given that recent years have witnessed a resurgence in popular academic and indeed state attention to questions related to environmental degradation and human safety Certainly in the latter context there is some recognition that environmental degradation must be understood partly in terms of environmental crimes by corporations Moreover recent experience in both the US and the UK attests to the fact that there is no ineluctable trend towards safer and healthier workplaces as deregulatory movements have resulted in increased risks for most workers and this text argues an increased opportunity for and incidence of safety crimes At the centre of environmental safety and health issues lie the chemicals industries These industries are of strategic importance to national economies while also having almost unique hazard and risk potential and it is for these reasons that these are the focus of this text Any understanding of the nature of these types of corporate crimes and thus any recognition of the potential for their more effective regulation requires an analysis that is grounded in more general sociological concerns and in political economy For this reason this text emphasises the need for understandings of the nature of contemporary and emergent forms of corporate organisation of their place in contemporary economies and of the relationships between these forms and state formations **Security**

2020 As people now go online from phones more than laptops most servers are in the cloud online advertising drives the Internet and social networks have taken over much human interaction many patterns of crime and abuse are the same but the methods have evolved Ross Anderson explores what security engineering means in 2020 including How the basic elements of cryptography protocols and access control translate to the new world of phones cloud services social media and the Internet of Things Who the attackers are from nation states and business competitors through criminal gangs to stalkers and playground bullies What they do from phishing and carding through SIM swapping and software exploits to DDoS and fake news Security psychology from privacy through ease of use to deception The economics of security and dependability why companies build vulnerable systems and governments look the other way How dozens of industries went online well or badly How to manage security and safety engineering in a world of agile development from reliability engineering to DevSecOps The third edition of Security Engineering ends with a grand challenge sustainable security As we build ever more software and connectivity into safety critical durable goods like cars and medical devices how do we design systems we can maintain and defend for decades Or will everything in the world need monthly software upgrades and become unsafe once they stop
