Modern Mathematicians:

Modern Mathematics Dirk De Bock, 2023-03-08 The international New Math developments between about 1950 through 1980 are regarded by many mathematics educators and education historians as the most historically important development in curricula of the twentieth century It attracted the attention of local and international politicians of teachers and of parents and influenced the teaching and learning of mathematics at all levels kindergarten to college graduate in many nations After garnering much initial support it began to attract criticism But as Bill Jacob and the late Jerry Becker show in Chapter 17 some of the effects became entrenched This volume edited by Professor Dirk De Bock of Belgium provides an outstanding overview of the New Math modern mathematics movement Chapter authors provide exceptionally high quality analyses of the rise of the movement and of subsequent developments within a range of nations The first few chapters show how the initial leadership came from mathematicians in European nations and in the United States of America The background leaders in Europe were Caleb Gattegno and members of a mysterious group of mainly French pure mathematicians who since the 1930s had published under the name of a fictitious Nicolas Bourbaki In the United States there emerged during the 1950s various attempts to improve U S mathematics curricula and teaching especially in secondary schools and colleges This side of the story climaxed in 1957 when the Soviet Union succeeded in launching Sputnik the first satellite Undoubtedly this is a landmark publication in education The foreword was written by Professor Bob Moon one of a few other scholars to have written on the New Math from an international perspective The final epilogue chapter by Professor Geert Vanpaemel a historian draws together the overall thrust of the volume and makes links with the general history of curriculum development especially in science education including recent globalization trends

The Nature and Growth of Modern Mathematics Edna Ernestine Kramer, 1982 Now available in a one volume paperback this book traces the development of the most important mathematical concepts giving special attention to the lives and thoughts of such mathematical innovators as Pythagoras Newton Poincare and Godel Beginning with a Sumerian short story ultimately linked to modern digital computers the author clearly introduces concepts of binary operations point set topology the nature of post relativity geometries optimization and decision processes ergodic theorems epsilon delta arithmetization integral equations the beautiful ideals of Dedekind and Emmy Noether and the importance of purifying mathematics Organizing her material in a conceptual rather than a chronological manner she integrates the traditional with the modern enlivening her discussions with historical and biographical detail

The Architecture of Modern Mathematics J. Ferreiros, J. J. Gray, 2006-04-27 This edited volume aimed at both students and researchers in philosophy mathematics and history of science highlights leading developments in the overlapping areas of philosophy and the history of modern mathematics It is a coherent wide ranging account of how a number of topics in the

philosophy of mathematics must be reconsidered in the light of the latest historical research and how a number of historical accounts can be deepened by embracing philosophical questions

Seki, Founder of Modern Mathematics in Japan
 Eberhard Knobloch, Hikosaburo Komatsu, Dun Liu, 2013-11-13 Seki was a Japanese mathematician in the seventeenth century known for his outstanding achievements including the elimination theory of systems of algebraic equations which preceded the works of tienne B zout and Leonhard Euler by 80 years Seki was a contemporary of Isaac Newton and Gottfried Wilhelm Leibniz although there was apparently no direct interaction between them The Mathematical Society of Japan and the History of Mathematics Society of Japan hosted the International Conference on History of Mathematics in Commemoration of the 300th Posthumous Anniversary of Seki in 2008 This book is the official record of the conference and includes supplements of collated texts of Seki s original writings with notes in English on these texts Hikosaburo Komatsu Professor emeritus The University of Tokyo one of the editors is known for partial differential equations and hyperfunction theory and for his study on the history of Japanese mathematics He served as the President of the International Congress of Mathematicians Kyoto 1990

History and Philosophy of Modern Mathematics William Aspray, Philip Kitcher, 1988 History and Philosophy of Modern Mathematics was first published in 1988 Minnesota Archive Editions uses digital technology to make long unavailable books once again accessible and are published unaltered from the original University of Minnesota Press editions The fourteen essays in this volume build on the pioneering effort of Garrett Birkhoff professor of mathematics at Harvard University who in 1974 organized a conference of mathematicians and historians of modern mathematics to examine how the two disciplines approach the history of mathematics In History and Philosophy of Modern Mathematics William Aspray and Philip Kitcher bring together distinguished scholars from mathematics history and philosophy to assess the current state of the field Their essays which grow out of a 1985 conference at the University of Minnesota develop the basic premise that mathematical thought needs to be studied from an interdisciplinary perspective The opening essays study issues arising within logic and the foundations of mathematics a traditional area of interest to historians and philosophers The second section examines issues in the history of mathematics within the framework of established historical periods and questions Next come case studies that illustrate the power of an interdisciplinary approach to the study of mathematics The collection closes with a look at mathematics from a sociohistorical perspective including the way institutions affect what constitutes mathematical knowledge
