Modern Radio Science 1999 M. A. Stuchly, 1999-09-14 This book contains fifteen chapters written by world leaders in various research areas in radio science Each chapter describes the most exciting and important scientific developments that have taken place during the last three years Fundamental information for a non specialist is provided to facilitate understanding and in addition the most current developments are highlighted Several chapters deal with issues of radio communication for example satellite communication mobile communication and associated measurements and discuss the resultant problems in electro magnetic spectrum congestion Three chapters outline closely associated issues namely new ways of modeling and designing systems components and antennas New developments and techniques are also covered in the scientific applications of radar radio astronomy and plasma waves In two chapters attention is devoted to quite different research issues at very low frequencies those of atmospheric noise and interference and the biological effects of power line electromagnetic fields

Space Science Herman J. Mosquera Cuesta, 2012-03-23 The all encompassing term Space Science was coined to describe all of the various fields of research in science Physics and astronomy aerospace engineering and spacecraft technologies advanced computing and radio communication systems that are concerned with the study of the Universe and generally means either excluding the Earth or outside of the Earth's atmosphere This special volume on Space Science was built throughout a scientifically rigorous selection process of each contributed chapter Its structure drives the reader into a fascinating journey starting from the surface of our planet to reach a boundary where something lurks at the edge of the observable light emitting Universe presenting four Sections running over a timely review on space exploration and the role being played by newcomer nations an overview on Earth's early evolution during its long ancient ice age a reanalysis of some aspects of satellites and planetary dynamics to end up with intriguing discussions on recent advances in physics of cosmic microwave background radiation and cosmology

Parapsychology Etzel Cardeña, John Palmer, David Marcusson-Clavertz, 2015-07-25 Many people have experienced such unusual phenomena as dreams that later seem to correspond with unforeseeable events thinking of a long lost friend just before he or she unexpectedly calls or the ability to feel the presence of deceased loved ones What many do not realize is that these types of experiences have been researched for more than a century by eminent scientists including Nobel laureates Most of these researchers have concluded that some of these phenomena do occur although we are far from explaining them to everyone's satisfaction This book is the first in almost 40 years to provide a comprehensive scientific overview of research in the field of parapsychology explaining what we know and don't know about so called psi phenomena such as telepathy precognition or psychokinesis Contributors evaluate the evidence for these phenomena accounting for factors such as selective memory wish fulfillment and incorrect methods or analyses in some cases offering psychological physical and biological theories Instructors considering this book for use in a course may request an examination copy here **Geospace**

Electromagnetic Waves and Radiation James W. LaBelle, R.A. Treumann, 2006-02-21 The contributions gathered in this volume provide introductions to current problems in geospace electromagnetic radiation guides to the associated literature and tutorial reviews of the relevant space physics Students and scientists working on various aspects of the terrestrial aurora or magnetospheric and near Earth heliospheric high frequency waves will find this volume an indispensable companion for their studies Schumann Resonance for Tyros Alexander Nickolaenko, Masashi Hayakawa, 2013-11-19 Schumann

resonance has been studied for more than half a century The field became popular among researchers of the terrestrial environment using natural sources of electromagnetic radiation lightning strokes primarily and now many Schumann observatories have been established around the world A huge number of publications can be found in the literature the most recent collection of which was presented in a special Schumann resonance section of the journal Radio Science in 2007 The massive publications however impede finding information about how to organize measurements and start observations of global electromagnetic resonance Relevant information is scattered throughout many publications which are not always available The goal of this book is to collect all necessary data in a single edition in order to describe the demands of the necessary equipment and the field site as well as the impact of industrial and natural interference and to demonstrate typical results and obstacles often met in measurements The authors not only provide representative results but also describe unusual radio signals in the extremely low frequency ELF band and discuss signals in the adjacent frequency ranges
