Modern Ship Design Thomas C. Gillmer, 1986 *Modern Ship Design* Thomas Charles Gillmer, 1975 *Ship Design and Performance for Masters and Mates* Bryan Barrass, 2004-07-09 *Ship Design and Performance for Masters and Mates* is a quick to use comprehensive reference that brings the key information needed to understand ship design and performance at your fingertips. The book covers all key aspects of ship design and performance supplemented by exam revision one liners. It does not assume detailed theoretical knowledge but rather builds up the reader's understanding of how the elements of ship design influence and impact on its performance and how the engineer crew and operators can maximise the performance of their vessel in operation. Written by an experienced marine engineering consultant author and lecturer, this book presents key facts and formulas backed up throughout by relevant theory, illustrations and photographs. It includes examples of modern ship types and their general particulars and covers topics ranging from design and power coefficients to types of ship resistance, types of ship speed, types of power on ships, designing a ship's propeller, details of maximum ship squats, the phenomena of interaction of ships in confined waters, mechanisms for improving ship handling and improvements in power output. This book is an essential introduction and reference for students and those newly at sea as well as for anyone involved with ship design, marine engineering, naval architecture and the day to day operation of ships in port. Accessible information on understanding and improving ship performance at your fingertips. Ideal for marine engineering students and those studying for certificates of competency. Covers all key aspects of ship design and performance with exam revision one liners.

Variants of Evolutionary Algorithms for Real-World Applications Raymond Chiong, Thomas Weise, Zbigniew Michalewicz, 2011-11-13 Evolutionary Algorithms EAs are population based stochastic search algorithms that mimic natural evolution Due to their ability to find excellent solutions for conventionally hard and dynamic problems within acceptable time EAs have attracted interest from many researchers and practitioners in recent years This book *Variants of Evolutionary Algorithms for Real World Applications* aims to promote the practitioner's view on EAs by providing a comprehensive discussion of how EAs can be adapted to the requirements of various applications in the real world domains It comprises 14 chapters including an introductory chapter re-visiting the fundamental question of what an EA is and other chapters addressing a range of real world problems such as production process planning inventory system and supply chain network optimisation task based jobs assignment planning for CNC based work piece construction mechanical ship design tasks that involve runtime intense simulations data mining for the prediction of soil properties automated tissue classification for MRI images and database query optimisation among others These chapters demonstrate how different types of problems can be successfully solved using variants of EAs and how the solution approaches are constructed in a way that can be understood and reproduced with little prior knowledge on optimisation
