

TEST 1

1. Consider the first order differential equation:

$$y' + \frac{t}{t^2 - 25}y = \frac{e^t}{t - 9}.$$

For each of the initial conditions below, determine the largest interval $a < t < b$ on which the existence and uniqueness theorem for first order linear differential equations guarantees the existence of a unique solution.

A) $y(-1.5) = -0.5$

B) $y(12) = -2.1$

2. An autonomous differential equation has the following equilibrium solutions:

$y = 4$, unstable

$y = -6$, semistable

Find the limit of the solution as $t \rightarrow \infty$ for the following initial conditions:

A) If $y(0) = 0$, then $\lim_{t \rightarrow \infty} y(t)$

B) If $y(0) = 9$, then $\lim_{t \rightarrow \infty} y(t)$

C) If $y(0) = 4$, then $\lim_{t \rightarrow \infty} y(t)$

Vanishing and Finiteness Results in Geometric Analysis Stefano Pigola, Marco Rigoli, Alberto G Setti, 2008-05-28 This book describes very recent results involving an extensive use of analytical tools in the study of geometrical and topological properties of complete Riemannian manifolds It analyzes in detail an extension of the Bochner technique to the non compact setting yielding conditions which ensure that solutions of geometrically significant differential equations either are trivial vanishing results or give rise to finite dimensional vector spaces finiteness results The book develops a range of methods from spectral theory and qualitative properties of solutions of PDEs to comparison theorems in Riemannian geometry and potential theory

Modern Techniques in Neuroscience Research Uwe Windhorst, Hakan Johansson, 2012-12-06 Nothing tends so much to the advancement of knowledge as the application of a new instrument Sir Humphry Davy 1778 1829 Neuroscience has become a rapidly expanding endeavor that relies on a number of other sciences such as mathematics physics chemistry engineering computer science general biology and medicine genetics etc In fact many of its recent successes result from the application of ideas and methods borrowed from these fields Insofar it is a true interdisciplinary undertaking This convergence of influences accounts for part of its enormous attractiveness and fascination to students and researchers from diverse walks of life or science for that matter It is probably fair to say that a great number of neuroscience's most creative and productive proponents have been lured into this field not only by the excitement about the possibility to unmask the secrets of the human mind but also by the appeal of a vast unknown land needing cultivation and tools to cultivate it Danger may arise for any science if it is dominated by methods and techniques of investigation rather than by problems to be solved and concepts to be developed This might concentrate efforts onto the technically feasible and doable rather than on the real issues But on the other hand especially the young and growing sciences are heavily dependent on the development and application of methods often even before a problem relying on these methods may become apparent

Multivalued Maps And Differential Inclusions:

Elements Of Theory And Applications Valeri Obukhovskii, Boris Gel'man, 2020-04-04 The theory of multivalued maps and the theory of differential inclusions are closely connected and intensively developing branches of contemporary mathematics. They have effective and interesting applications in control theory, optimization, calculus of variations, non-smooth and convex analysis, game theory, mathematical economics and in other fields. This book presents a user-friendly and self-contained introduction to both subjects. It is aimed at beginners starting with students of senior courses. The book will be useful both for readers whose interests lie in the sphere of pure mathematics as well as for those who are involved in applicable aspects of the theory. In Chapter 0 basic definitions and fundamental results in topology are collected. Chapter 1 begins with examples showing how naturally the idea of a multivalued map arises in diverse areas of mathematics and continues with the description of a variety of properties of multivalued maps and finishes with measurable multivalued functions. Chapter 2 is devoted to the theory of fixed points of multivalued maps. The whole of Chapter 3 focuses on the study of differential inclusions and their applications in control theory. The subject of last Chapter 4 is the applications in dynamical systems, game theory and mathematical economics. The book is completed with the bibliographic commentaries and additions containing the exposition related both to the sections described in the book and to those which left outside its framework. The extensive bibliography including more than 400 items leads from basic works to recent studies. Navier-Stokes Equations and Turbulence C. Foias, O. Manley, R. Rosa, R. Temam, 2001-08-27 This book aims to bridge the gap between practising mathematicians and the practitioners of turbulence theory. It presents the mathematical theory of turbulence to engineers and physicists and the physical theory of turbulence to mathematicians. The book is the result of many years of research by the authors to analyse turbulence using Sobolev spaces and functional analysis. In this way the authors have recovered parts of the conventional theory of turbulence deriving rigorously from the Navier-Stokes equations what had been arrived at earlier by phenomenological arguments. The mathematical technicalities are kept to a minimum within the book enabling the language to be at a level understood by a broad audience. Each chapter is accompanied by appendices giving full details of the mathematical proofs and subtleties. This unique presentation should ensure a volume of interest to mathematicians, engineers and physicists. *Mathematical Reviews*, 1998
