

# The Forces of the Universe

The four fundamental forces of nature are those that are not derived from basic forces. Physicists believe that, at one time, all physical forces functioned as a single force and that during the expansion of the universe, they became distinct from each other. Each force now governs different processes, and each interaction affects different types of particles. Gravity, electromagnetism, strong nuclear interactions, and weak nuclear interactions are essential to our understanding of the behavior of the many objects that exist in the universe. In recent years, many scientists have tried with little success to show how all forces are manifestations of a single type of exchange.

## General Theory of Relativity

The theory of relativity, developed by Albert Einstein, is a physical theory that describes the relationship between space and time. It is a generalization of Newton's theory of gravitation, which describes the relationship between space and time in the presence of gravity.
