**Science in Islamicate Societies** Sonja Brentjes,2023-09-05 This book presents eight papers about important historiographical issues as debated in the history of science in Islamicate societies the history of science and philosophy of medieval Latin Europe and the history of mathematics as an academic discipline Six papers deal with themes about the sciences in Islamicate societies from the ninth to the seventeenth centuries among them novelty context and decline Two other papers discuss the historiographical practices of historians of mathematics and other disciplines in the nineteenth and twentieth centuries The central argument of the collected papers is that in addition and beyond the study of scientific texts and instruments historians of science in Islamicate societies need to pay attention to cultural material and social aspects that shaped the scientific activities of the authors and makers of such texts and instruments It is pointed out that the diachronic de contextualized comparison between methods and results of scholars from different centuries regions and cultures often

leads to serious distortions of the historical record and is responsible for the long term neglect of scholarly activities after the so called Golden Age The book will appeal in particular to teachers of history of science in Islamicate societies to graduate students interested in issues of methodology and to historians of science grappling with the unresolved problems of how think and write about the sciences in concrete societies of the past instead of subsuming all extant texts instruments maps and other objects related to the sciences under macro level concepts like Islam or Latin Europe CS 1114 Scientific and technical programs and program management United States. Larry, 2023-06-12 Misunderstandings of biblical creation texts have resulted from a lack of appreciation of the cultural context of the inspired writers Views of nature have changed greatly over history At the time of ancient Israel people gazed up to the star studded firmament that separated the waters above from the waters below and the land Land was bounded by sea which merged with the waters above at the horizon The universe was close and intimate Pagan peoples believed gods occupied this realm and accounted for much of observed cause and effect Biblical writers also viewed nature in this context However they were distinctly monotheistic writing of a supreme God who made and gave meaning to everything God chose a covenant relationship with a select people This relationship was based on belief in God faith Fast forward through many twists and turns of intellectual history and we come to the modern scientific age We picture our home as a spherical planet rotating once a day and orbiting the sun yearly We gaze out at a vast space seeing distant suns the stars and enormous collections of stars galaxies Light travels at a known speed thus astronomers peer back to times billions of years in the past We need to avoid concordism conflating modern views with the biblical text The concordism error has occurred throughout church history up to the present The book addresses this as well as some discoveries of modern science that were unknown to ancient people Such discoveries give us good reason to bow in awe before the Creator Even though mankind's views of nature have greatly changed with time the message of the Bible is the same We come to God through faith as did Abraham

who saw more than meets the eye
