Tallón-Ballesteros, 2023-08-23 The concept of Big Data has become increasingly familiar in recent years and it is already an indispensible tool in the management of everything from supply chains and transport to health and education This book presents the proceedings of MMBD 2023 the 4th International Conference on Modern Management based on Big Data held in Seoul South Korea from 1

4 August 2023 The 50 papers included here were selected from total of around 160 submissions after a rigorous review process Papers delivered at the conference were divided into 3 main categories Big Data Modern Management and a special session devoted to Big Data driven manufacturing and service industry supply chain SC management but in addition to these general topics there were also a number of papers related to lifelong education Topics covered in the book include innovation in online education management with big data digital transformation in lifelong education big data analysis in lifelong education management green supply chain management big data analytics in supply chains policy and strategy for new energy and the environment smart grid load and energy management decision making on sustainable transport policies modern healthcare management and social strategy to manage human relationships Of particular interest are papers concerning big data analysis and emerging applications Presenting innovative original ideas and methods together with significant results and supported by clear and rigorous reasoning and compelling new evidence the book will be of interest to all those who use Big Data to support their management strategies **Modern Signal Processing** Xian-Da Zhang, 2022-12-05 The book systematically introduces theories of frequently used modern signal processing methods and technologies and focuses discussions on stochastic signal parameter estimation modern spectral estimation adaptive filter high order signal analysis and non linear transformation in time domain signal analysis With abundant exercises the book is an essential reference for graduate students in electrical engineering and information science **Statistical Digital Signal Processing and Modeling** Monson H. Hayes, 1996-04-19 This new text responds to the dramatic growth in digital signal processing DSP over the past decade and is the product of many years of teaching an advanced DSP course at Georgia Tech While the focal point of the text is signal modeling it integrates and explores the relationships of signal modeling to the important problems of optimal filtering spectrum estimation and adaptive filtering Coverage is equally divided between the theory and philosophy of statistical signal processing and the algorithms that are used to solve related problems. The text reflects the author's philosophy that a deep understanding of signal processing is accomplished best through working problems For this reason the book is loaded with worked examples homework problems and MATLAB computer exercises While the examples serve to illustrate the ideas developed in the book the problems seek to motivate and challenge the student and the computer exercises allow the student to experiment with signal processing algorithms on complex signals Professor Hayes is recognized as a leader in the signal processing community particularly for his work in signal reconstruction and image processing This text is suitable for senior graduate level courses in advanced DSP or digital filtering found in Electrical Engineering Departments Prerequisites include basic courses in DSP and probability theory
