Technological Concepts and Mathematical Models in the Evolution of Modern Engineering Systems Mario Lucertini, Ana Millàn Gasca, Fernando Nicolò, 2012-12-06 M LUCERTINI A MILLAN GASCA AND F NICOLO 1 Technology as Knowledge The Case of Modern Engineering Systems In recent years scholars coming from the fields of history and philosophy of sci ence and technology have devoted much attention to the problem of technology as knowledge and to the emergence of an autonomous engineering science in the Industrial Agel This interest echoes a growing awareness among engineers of the independence of their conceptual approach with respect to other forms of knowl edge linked to the consolidation of autonomous academic engineering research in the 20 century A careful examination of the nature of technological knowledge appears particularly valuable in view of the pervasive presence of technology in contemporary life and culture not only as a result of its impressive achievements but through the less obvious influence of its concepts and viewpoints as well The activity of engineers and technicians has been traditionally based on the practical ability to cope with specific situations and to attain the corresponding specific goal by means of the design and realization of an artifact or structure on the basis of past experience handed down by tradition and applied by means of trial and error and rule of thumb procedures But the existence of a theoretical background and of principles underpinning this activity can be traced back to classical antiquity
