T. Mao, 2002 Gives a quick and easy introduction to Chinese cultures and history and then uses that information to explain why the traditional Chinese economy stagnated and why the modern Chinese economy is succeeding Written for western travelers to China and the general public *Modernizing China's Industries* Colin G. Brown, Scott A. Waldron, John William Longworth, 2005-01-01 The book fills an important gap in understanding the process of economic transformation by providing a comprehensive and in depth micro level analysis of industrial transition The book is highly recommended for those who are working on or studying the Chinese economic transformation focusing especially on industry and its transition Ligang Song Economic Record As the authors admit the wool industry may seem a rather obscure choice p 23 Yet this is a book of interest to a much wider relationship than agro business specialists It provides a meticulous case study of one industry which illuminates a number of broader issues currently under discussion in the China studies field As the Chinese economy becomes more variegated economists and political scientists trying to understand the Chinese

economic reform experience will increasingly have to rely on such studies. They bring out the intricacies of this process and help us to move from across the board generalizations on property rights reform to more nuanced analyses of economic transition. Björn Alpermann *The China Journal* China defies generalizations and the only way that we can hope to obtain a clear idea of the process of reform is through detailed studies that trace the complex ebb and flow of reforms including the interactions between centre and locality and between the stages of the process. This is a valuable study that will stand the test of time. Will Martin *The World Bank* US This book is more than yet another industry report. This is a book on transition. It describes the mega forces: privatization, state owned enterprise reform, internationalization, increasing competition and their mega consequences: the proliferation of small private traders, the diversification of the process sector, the disintegration of government agencies and private initiatives that had been in charge of coordinating and managing quality that not only affected the wool sector but are literally re-defining the fabric of China's economy. For those interested in trying to better understand the fastest growing economy in the world, this is a must read. Neither the authors' competence in wool technology nor their description of the institutional details of the wool economy gets in the way of their main message: Powerful economic forces are at work in China. In some cases there are positive benefits through competitive and improved incentives. In other cases however there is a cost in terms of rising transaction costs, imperfect information and the inability to rationalize the evolving supply chains. Scott Rozelle *University of California* US China is the world's largest producer and consumer of wool textiles but the structure of its industry remains confusing and complex to many. While China offers the most important growth opportunity in the world today, the transition from a centrally planned to a market economy has compounded the difficulties and risks for many traders and investors wishing to deal with and in this market. This publication makes a major contribution towards unravelling the complexity of Chinese industrial structures through its review of recent changes to one of China's oldest but still significant manufacturing sectors, the wool textile industry. The lessons learned through this study will be relevant to anyone wishing to understand China's industrial modernization processes. Barry White *Chief Executive Officer International Fibre Council (IFC) Ltd* Director Australia China Business Council Exposed to powerful new economic forces and undergoing dramatic ownership reforms and technological changes, China's industries are modernizing at a breakneck pace. In many industries the outcomes have been chaotic and poorly aligned with societal objectives. This book analyses the transformation and modernization of China's industries through a detailed investigation of the wool and wool textile industries. The authors argue that to remain

Modernizing China A. Doak Barnett, 2019-03-05 Since the death of Mao China has entered a new period in its development Turning away from the all encompassing emphasis on revolutionary struggle and ideological transformation

that characterized the last years of the Maoist era China's leaders under Deng Xiaoping have initiated dramatic new reform and development policies. In original essays the contributors, all senior specialists on contemporary China, analyze the reasons for the new policies, the nature and impact of the changes now occurring, and the prospects for a continuation of these policies in the future. Specifically, they examine the Chinese polity as a consultative authoritarian system, the far-reaching changes in China's agriculture, important shifts in foreign economic relations, the gradual modernization policy pursued by its military leaders, the relaxation of controls on cultural life, and the possibility that current social policies may well increase equality rather than inequality in Chinese society. The authors conclude that it is too early to judge the eventual long-term outcome of current reforms, which they believe grew out of the political crises and chronic economic problems that afflicted China in the late 1960s and early 1970s. Although they see some opposition and built-in limits to reform, on balance they foresee strong support for continued reform and believe it will be difficult for future leaders to reverse course.
