The Directory of Graduate Studies ,1995 Canadian Journal of Mathematics ,1989-12 **Hilbert C*-Modules** E. Christopher Lance, 1995-03-16 Hilbert C modules are objects like Hilbert spaces except that the inner product instead of being complex valued takes its values in a C algebra The theory of these modules together with their bounded and unbounded operators is not only rich and attractive in its own right but forms an infrastructure for some of the most important research topics in operator algebras This book is based on a series of lectures given by Professor Lance at a summer school at the University of Trondheim It provides for the first time a clear and unified exposition of the main techniques and results in this area including a substantial amount of new and unpublished material It will be welcomed as an excellent resource for all graduate students and researchers working in operator algebras Polynomials and the mod 2 Steenrod Algebra: Volume 2, Representations of $GL(n, F_2)$ Grant Walker, Reginald M. W. Wood, 2017-11-09 This is the first book to link the mod 2 Steenrod algebra a classical object of study in algebraic topology with modular representations of matrix groups over the field F of two elements The link is provided through a detailed study of Peterson's hit problem

concerning the action of the Steenrod algebra on polynomials which remains unsolved except in special cases The topics range from decompositions of integers as sums of powers of 2 minus 1 to Hopf algebras and the Steinberg representation of $GL_n F$ Volume 1 develops the structure of the Steenrod algebra from an algebraic viewpoint and can be used as a graduate level textbook Volume 2 broadens the discussion to include modular representations of matrix groups Polynomials and the mod 2 Steenrod Algebra Grant Walker,Reginald M. Permutation Patterns Steve Linton,Nik Ruškuc,Vincent Vatter,2010-06-03 The study of permutation patterns is a thriving area of combinatorics that relates to many other areas of mathematics including graph theory enumerative combinatorics model theory the theory of automata and languages and bioinformatics Arising from the Fifth International Conference on Permutation Patterns held in St Andrews in June 2007 this volume contains a mixture of survey and research articles by leading experts and includes the two invited speakers Martin Klazar and Mike Atkinson Together the collected articles cover all the significant strands of current research structural methods and simple patterns generalisations of patterns various enumerative aspects machines and networks packing and more Specialists in this area and other researchers in combinatorics and related fields will find much of interest in this book In addition the volume provides plenty of material accessible to advanced undergraduates and is a suitable reference for projects and dissertations
