## **Modulation Of Mhc Antigen Expression And Disease:**

Modulation of MHC Antigen Expression and Disease G. Eric Blair, Craig R. Pringle, D. John Maudsley, 1995-11-09 The major histocompatibility complex MHC genes are involved in the immune system's response to tumor and infected cells and in generating an immune response This book brings together basic aspects of the regulation of MHC antigens with important clinical applications in viral infection viral oncology cancer biology and autoimmunity There is a strong emphasis on situations where MHC expression is modulated either stimulated or repressed The book's major themes are the mechanisms of MHC expression explored at several levels including the transcription and translation of MHC genes and the insertion of MHC protein molecules into plasma membranes the effect of cytokines on MHC expression both in the etiology of certain diseases and in possible immunotherapeutic approaches to disease and the use of gene therapy to modify MHC expression in cancer cells and thereby cause tumor rejection This book will be valuable to researchers and clinicians in molecular biology immunology oncology and virology

**Neuromuscular Diseases: From Basic Mechanisms to Clinical Management** F. Deymeer, Julien Bogousslavsky, 2000-07 In the last few decades important advances have changed the face of neuromuscular diseases Once stagnant with hardly any prospect of therapy the field has recently witnessed continuous progress thanks to genetic discoveries which have opened a new era with potential treatment modalities and to immunological developments which have turned around the grave outcome of some diseases Scientific work has resulted in deeper insights into the pathogenesis of neuromuscular diseases and has at the same time made fundamental changes in their classification necessary This book reviews the electrophysiological genetic and immunological bases of some of the major neuromuscular diseases and evaluates their importance pertaining to the clinical management of the patients Included are up to date topics such as gene therapy myoblast transfer and new drug trials Written by experts in their own fields this volume will not only be of great value to neurologists and neuroscientists but also to geneticists immunologists and physiologists

**Genetics of Immunological Diseases** Beverly Mock, Michael Potter, 2013-03-09 The development of innovative molecular techniques such as pulse field gel electrophoresis cDNA subtraction libraries and chromosome hopping libraries coupled with the increasing popularity in the prospect of sequencing mammalian genomes has triggered a resurgence of interest in finding and characterizing genes that play a role in modifying immune processes and diseases Genetically defined strains of mice e.g. inbred strains and recently derived stocks of wild mice provide ideal models for examining the genetic control of diseases as a result of their syntenic relationship with man in genetic composition as well as linkage conservation Due to the relative ease of producing a specific genotype via appropriate breeding schedules murine models may provide the only hope for unravelling those complex disease processes under multigenic control This issue of CTMI is a collection of papers on the characterization and mapping of genes involved in mutations and dysregulated immune responses which produce disease phenotypes These papers were presented at a workshop which was devoted to examining reverse genetic approaches at

localizing cloning and characterizing genes involved in a variety of developmental autoimmune neoplastic and infectious disease processes In the first of three sections a series of papers outline the most currently used methods of mapping and isolating genes whose products are unknown The papers following are devoted to specific gene systems whose dysregulation is likely to produce mutant or disease phenotypes

Inflammatory Bowel Diseases B. R. Bistrian,J. A. Walker-Smith,1999-07 Among inflammatory bowel diseases Crohn s disease and ulcerative colitis are of particular importance to gastroenterologists treating both children and adults Although the etiology of these diseases is still largely unknown knowledge of their immunopathology is increasing Typically proinflammatory cytokine production is abnormal and particularly in Crohn s disease the consequent inflammation is responsive to nutritional intervention or anticytokine therapy The contributions in this volume focus on nutritional therapy which is important for both the repletion of associated protein energy malnutrition and for modulation of the inflammatory response Highlights include the growing role of enteral nutrition as primary therapy in pediatric practice and investigations into the ideal diet composition including type of formula polymeric protein hydrolysate or amino acid Furthermore the pro and anti inflammatory effects of omega 6 and omega 3 fatty acids respectively and their impact on clinical response receive special attention This publication offers a wealth of information for gastroenterologists dealing with both adults and children as well as for clinical and research nutritionists clinical immunologists and others interested in dietetic therapy

Brown,2013-03-09 Interest in the coronaviruses has never been greater Their economic impact is considerable as they infect humans livestock poultry and companion animals Murine hepatitis virus MHV infection of the mouse and rat central nervous

systems are the subject of intense study these investigations are providing insights into the potential role of viruses in human neurological diseases and more generally into mechanisms causing neurological damage The single stranded positive sense RNA genomes of two species of these enveloped viruses IBV and MHV have been cloned completely and one of them IBV sequenced in its entirety revealing a genome size of some 27000 nucleotides This has made possible more incisive investigations into the nature of those polypeptides encoded by more than half of the genome which are likely to contribute in the main to RNA polymerase replicase activity Intriguingly ribosomal frameshifting is exhibited within the mRNA coding for these polypeptides The cloning sequencing phase of coronavirology for which the 1980 s will be partly remembered has provided a sound framework for further studies of the virus structural proteins and also some provocative insights relevant to these studies The large spike glycoprotein s responsible for membrane fusion and bearing important antigenic sites varies amazingly in length and composition both within as well as between coronavirus species Receptors on host cells have been identified The integral membrane glycoprotein M has been shown to use internal hydrophobic sequences to direct translocation within membranes

**The Molecular Pathology of Autoimmune Diseases** Argyrios N Theofilopoulos, Constantin A. Bona, 2002-12-06 Remarkable advances have been made in the pathogenesis of autoimmunity such as with bone marrow transplantation which is becoming a powerful strategy in treating certain life threatening diseases The Molecular Pathology of Autoimmune Diseases is a concise and centralized resource for information on the topic with a special focus on the molecular and genetic basis of these disorders Dozens of international experts devote themselves to illuminating the reader in this volume with discussions on the basic aspects of autoimmune processes to systemic and organ specific diseases This volume is an invaluable reference to students and professionals in immunology and related fields

**Biomedical Index to PHS-supported Research: pt. A. Subject access A-H**, 1992 **Chronic Obstructive Lung Diseases** Norbert F. Voelkel, William MacNee, 2002 In the tradition of Schwarz and King this work brings together internationally renowned contributors from the front lines of pulmonary medicine and research in one timely and authoritative compendium It takes a new and comprehensive look at a large medical problem chronic obstructive lung diseases are a problem of global importance and the incidence of COPD is increasing in many countries and COPD is an important cause of morbidity and mortality The focus is on the pathobiology of COPD and emphysema on the exacerbation of COPD and on treatment options *Genetic Susceptibility to Infectious Diseases* Richard A. Kaslow M.D., Janet McNicholl M.D., Adrian V. S. Hill, 2008-03-03 Infectious diseases are commonly regarded as a distinct category with different causes and patterns than chronic or genetic disease But in fact there are many varieties of genetic susceptibility to infection the subject of this book which will be divided into three sections 1 concepts and methods 2 genes and pathophysiologic mechanisms and 3 infectious agents and diseases No currently published text on either genetics or infectious diseases focuses on the genetic aspects of the special relationship between host and pathogen in the way envisioned for Section 1 No other work on the

selected genes regulating immunity deals as systematically with the sequence variation function relationships most pertinent to infection as planned for Section 2 And no other book gives as meaningful a picture of how these genes operate in infectious disease as Section 3 will      **JAK inhibition in autoimmune and inflammatory diseases** Jean-Baptiste Telliez,Massimo Gadina,Kamran Ghoreschi,Olli Silvennoinen,Francesca Romana Spinelli,2023-02-02      *Immune system disorders: from molecular mechanisms to clinical implications* Mauricio César De Marzi,Marisa Mariel Fernandez,Ruben Dario Motrich ,Matias Ostrowski,2024-10-17 In recent years the increase in knowledge about the functioning of the immune system has revealed not only its importance in the defense against external agents such as pathogens or toxins but also in the control of tumor cells and the importance of the processes of inflammation or immunological tolerance On the one hand all this knowledge has allowed a better understanding of the putative pathogenic consequences of immune system dysfunction which includes inflammatory autoimmune and immunosuppressive diseases among others On the other hand current knowledge about immunoregulation has paved the way to better prevent or control transplantation rejection However such mechanisms underlying immune dysregulation are highly variable depending on the type of pathology systemic chronic inflammatory diseases autoinflammatory diseases autoimmune disorders immunosuppression and on characteristics of the host such as sex genetics nutritional status etc Given the wide variety of pathologies that are a consequence of excessive inefficient or inadequate induction of immune responses the study of factors involved in the dysregulation of the immune system has gained great attention during the last decades      *The Mononuclear Phagocyte System in Infectious Disease* Geanncarlo Lugo-Villarino,Céline Cougoule,Etienne Meunier,Yoann Rombouts,Christel Vérollet,Luciana Balboa,2019-10-04 The Mononuclear Phagocyte System MPS of vertebrates is composed of monocytes macrophages and dendritic cells Together they form part of the first line of immune defense against a variety of pathogens bacteria fungi parasites and viruses and thus play an important role in maintaining organism homeostasis The mode of transmission type of replication and mechanism of disease causing differ significantly for each pathogen eliciting a unique immune response in the host Within this context the MPS acts as both the sentinel and tailor of the immune system As sentinels MPS cells are found in blood and within tissues throughout the body to patrol against pathogenic insult The strategy to detect microbial non self relies on MPS to recognize conserved microbial products known as pathogen associated molecular pattern PAMPs PAMPs recognition represents a checkpoint in the response to pathogens and relies on conserved pattern recognition receptors PRRs Upon PRR engagement MPS mount a cell autonomous attack that includes the internalization and compartmentalization of intracellular pathogens into toxic compartments that promote destruction In parallel MPS cells launch an inflammatory response composed of a cellular arm and soluble factors to control extracellular pathogens In cases when innate immunity fails to eliminate the invading microbe MPS serves as a tailor to generate adaptive immunity for pathogen eradication and generation of memory cells thus ensuring enhanced protection against re infection Indeed MPS cell functions comprise the capture process

migration and delivery of antigenic information to lymphoid organs where type 1 immunity is tailored against intracellular microbes and type 2 immunity against extracellular pathogens. However, this potent adaptive immunity is also a double-edged sword that can cause aberrant inflammatory disorders like autoimmunity or chronic inflammation. For this reason, MPS also tailors tolerance immunity against unwanted inflammation. Successful clearance of the microbe results in its destruction and proper collection of debris, resolution of inflammation, and tissue healing for which MPS is essential. Reciprocally, as part of the evolutionary process taking place in all organisms, microbes evolved strategies to circumvent the actions bestowed by MPS cells. Multiple pathogens modulate the differentiation, maturation, and activation programs of the MPS as an efficient strategy to avoid a dedicated immune response. Among the most common evasion strategies are the subversion of phagocytosis, inhibition of PRR-mediated immunity, resistance to intracellular killing by reactive oxygen and nitrogen species, restriction of phagosome maturation, modulation of cellular metabolism and nutrient acquisition, regulation of cell death and autophagy, and modulation of pro-inflammatory responses and hijacking of tolerance mechanisms among others. The tenet of this eBook is that a better understanding of MPS in infection will yield insights for development of therapeutics to enhance antimicrobial processes or dampen detrimental inflammation for the host's benefit. We believe that contributions to this topic will serve as a platform for discussion and debate about relevant issues and themes in this field. Our aim is to bring expert junior and senior scientists to address recent progress, highlight critical knowledge gaps, foment scientific exchange, and establish conceptual frameworks for future MPS investigation in the context of infectious disease.

**Unconventional Agents and Unclassified Viruses** O.-R. Kaaden, W. Eichhorn, C.-P. Czerny, 2012-12-06. Among unconventional agents and unclassified viruses, the contributions to this volume focused on prion-related diseases with special emphasis on bovine spongiform encephalopathy and human spongiform encephalopathies and Borna disease virus, an agent known since long time to be pathogenic for horses and sheep, which is now discussed as a potential pathogen for humans. Additionally, the volume contains articles about newly discovered viruses like porcine respiratory and reproductive syndrome virus and viruses that are classified only provisionally like African swine fever virus, hepatitis C and E viruses, or the arteriviruses.
