**Module, Proportion, Symmetry, Rhythm** Gyorgy Kepes, 1966      **Module, proportion, symmetry, rhythm** Philip Morrison, C. H. Waddington, Arthur L. Loeb, Stanislaw Ulam, Lawrence B. Anderson, Ezra D. Ehrenkrantz, Richard P. Lohse, Anthony Hill, Ernő Lendvai, John Cage, François Molnar, Rudolf Arnheim, 1966      Gyorgy Kepes John R. Blakinger, 2019-06-25

How Gyorgy Kepes the last disciple of Bauhaus modernism became the single most significant artist within a network of scientific experts and elites Gyorgy Kepes 1906 2001 was the last disciple of Bauhaus modernism an acolyte of L szl Moholy Nagy and a self styled revolutionary artist But by midcentury transplanted to America Kepes found he was trapped in the military industrial aesthetic complex In this first book length study of Kepes John Blakinger argues that Kepes by opening the research laboratory to the arts established a new paradigm for creative practice the artist as technocrat First at Chicago s New Bauhaus and then for many years at MIT Kepes pioneered interdisciplinary collaboration between the arts and sciences what he termed interthinking and interseeing Kepes and his colleagues ranging from metallurgists to mathematicians became part of an important but little explored constellation the Cold War avant garde Blakinger traces Kepes s career in the United States through a series of episodes Kepes s work with the military on camouflage techniques his development of a visual design pedagogy as seen in the exhibition The New Landscape and his book The New Landscape in Art and Science his encyclopedic Vision Value series his unpublished magnum opus the Light Book the Center for Advanced Visual Studies CAVS an art science research institute established by Kepes at MIT in 1967 and the Center s proposals for massive environmental installations that would animate the urban landscape CAVS was entangled in the antiwar politics of the late 1960s as many students and faculty protested MIT s partnerships with defense contractors some of whom had ties to the Center In attempting to undream the Bauhaus into existence in the postwar world Kepes faced profound resistance Generously illustrated drawing on the vast archive of Kepes s papers at Stanford and MIT s CAVS Special Collection this book supplies a missing chapter in our understanding of midcentury modern and Cold War visual culture      Art and the Home Imogen Racz, 2015-01-26 Our homes contain us but they are also within us They can represent places to be ourselves to recollect childhood memories or to withdraw into adult spaces of intimacy they can be sites for developing rituals family relationships and acting out cultural expectations Like the personal social and cultural elements out of which they are constructed homes can be not only comforting but threatening too The home is a rich theme running through post war western art and it continues to engage contemporary artists today yet it has been the subject of relatively little critical writing Art and the Home Comfort Alienation and the Everyday is the first single authored up to date book on the subject Imogen Racz provides a theme led discussion about how the physical experience of the dwelling space and the psychological complexities of the domestic are manifested in art focusing mainly on sculpture installation and object based practice discussing the work and ideas of artists as diverse as Louise Bourgeois Gordon Matta Clark George Segal and

Cornelia Parker within their artistic and cultural contexts

What is the essence of graphic design? How do graphic designers solve problems, organize space, and imbue their work with those visual and symbolic qualities that enable it to convey visual and verbal information with expression and clarity? The extraordinary flowering of graphic design in our time as a potent means for communication and a major component of our visual culture increases the need for designers, clients, and students to comprehend its nature. In this lively and lavishly illustrated book, the author reveals the very essence of graphic design. The elements that combine to form a design—signs, symbols, words, pictures, and supporting forms—are analyzed and explained. Graphic design's ability to function as language and the innovative ways that designers combine words and pictures are discussed. While all visual arts share common spatial properties, the author demonstrates that graphic space has unique characteristics that are determined by its communicative function. Graphic designs can have visual and symbolic properties which empower them to communicate with deep expression and meaning. The author defines this property as graphic resonance and explains how it occurs. After defining design as a problem-solving process, a model for this process is developed and illustrated by an in-depth analysis of actual case histories. This book will provide insight and inspiration for everyone who is interested or involved in graphic communications. While most materials about form and meaning in design have a European origin, this volume is based on the dynamic and expressive graphic design of America. The reader will find inspiration, hundreds of exciting examples by many of America's outstanding graphic designers, and keen insights in *Type and Image*.

*The Architecture of Patterns* Paul Andersen, David Salomon, 2010-10-18

Through a precise and expansive definition of what a pattern is, this book offers ways to understand and use patterns in contemporary design. From the structure of the universe to the print on your grandmother's couch, patterns are found in a variety of concrete and conceptual phenomena. For architecture, something that so easily traffics between science and taste demands attention, which partially explains patterns' recent revival across diverse stylistic and intellectual camps. Yet despite their ubiquity, their resurgence remains untheorized, and their capabilities underutilized. To date, no account has been given for their recent proliferation, nor have their various formal and functional capacities been examined. In fact, the relationship between patterns and architecture hasn't been addressed in almost 30 years. This book fills that gap by tracking the definitions and applications of patterns in a number of fields and by suggesting how contemporary patterns might be used in design. Drawing on historical material and recent case studies, it gives shape to patterns' emerging potential. *The Architecture of Patterns* provides an updated definition of patterns that is at once precise and expansive, one that allows their sensory, ephemeral, and iterative traits to be taken as seriously as their functional, everlasting, and essential ones.

Shaw, 2003-11-19 The demand for math and science skills in our technology driven world is at a premium and yet U S students continue to lag behind many other industrialized countries in these areas This book based on studies conducted on 8000 elementary school aged children proposes that not only is there a relationship between music and math comprehension but that music can be utilized to heighten higher brain function and improve math skills The enclosed CD Rom includes 1 a recording of Allegro con spirito from Sonata for Two Pianos in D Major K 448 by Wolfgang Amadeus Mozart performed by Murray Perahia and Radu Lupu courtesy of Sony Classical™ and 2 a descriptive interactive version of S T A R™ Spatial Temporal Animation Reasoning software program While this book's discussion of the breakthroughs in understanding of spatial temporal reasoning abilities will be of particular interest to neuroscientists and cognitive researchers the book is also accessible to parents and educators Presents the theory that music exercises higher brain function and can enhance math comprehension Details how music training coupled with special temporal reasoning thinking in pictures can dramatically impact a child's ability to understand and master math Includes an interactive CD ROM with math games      **Erwin Hauer** Erwin Hauer, 2004-03 If we rarely think of walls as works of mesmerizing beauty Erwin Hauer can hardly be blamed Erwin Hauer Continua resurrects the extraordinary but little known work of this Austrian born sculptor whose designs of perforated and modular structures are symphonies of measured elegance Built in Austria Canada Italy Mexico Holland the Antilles Venezuela and the U S Hauer's architectural walls and screens caused a stir when they were erected in the 1950s but have since been lost in time This book gathers stunning photographs of these works many of them now destroyed or no longer accessible Hauer has exhibited widely in the United States and Europe and his sculptures can be found in many public and corporate collections including those of the Brooklyn Museum of Art the Chicago Art Institute the Wadsworth Atheneum the Benson Sculpture Park in Loveland CO and the Museum of the National Academy of Design      **Culture in Mind** Bradd Shore, 1998-10-29 Despite the recognized importance of cultural diversity in understanding the modern world the emerging science of cognitive psychology has relied far more on experimental psychology neurobiology and computer science than on cultural anthropology for its models of how we think In this exciting new book anthropologist Bradd Shore has created the first study linking multi culturalism to cognitive psychology exploring the complex relationship between culture in public institutions and in mental representations In so doing he answers in a completely new way the age old question of whether humans are basically the same psychologically independent of cultures or basically diverse because of cultural differences The first half of the book emphasizes cultural models from Australian Aboriginal rituals and Samoan comedy skits to more familiar terrain including a study of baseball as a cultural model for Americans Along the way the author sheds new and novel light on many familiar institutions from educational curricula and shopping malls to modular furniture and cyberpunk fiction These observations are then linked to theoretical developments in linguistics semiotics and neuroscience creating a

bold new approach to understanding the role of culture in everyday meaning making The author argues that culture must be considered an intrinsic component of the human mind to a degree that most psychologists and even many anthropologists have not recognized This new position of cultural models will make absorbing reading for psychologists anthropologists linguists and philosophers and to anyone interested in the issues of cultural diversity multiculturalism or cognitive science in general

Mathematics and Computation in Music Timour Klouche, Thomas Noll, 2010-07-19 This volume comprises a selection of papers presented at the first International Conference on Mathematics and Computation in Music mcm2007 The conference took place at the Staatliches Institut für Musikforschung PK National Institute for Music Research in Berlin during May 18-20 2007 and was jointly organized by the National Institute for Music Research Berlin and the Society of Mathematics and Computation in Music The papers were selected for the conference by the program committee and classified into talks and posters All papers underwent further selection revision and elaboration for this book publication The articles cover a research field which is heterogeneous with respect to content scientific language and methodology On one hand this reflects the heterogeneity and richness of the musical subject domain itself On the other hand it exemplifies a transition which has been explicitly intended by both the organizers and the founders of the society namely to support the integration of mathematical and computational approaches to music theory composition analysis and performance The subdivision into three parts reflects the original structure of the program These parts are opened by invited papers and followed by talks and posters

*Biological Emergences* Robert G. B. Reid,2009-08-21 A critique of selectionism and the proposal of an alternate theory of emergent evolution that is causally sufficient for evolutionary biology Natural selection is commonly interpreted as the fundamental mechanism of evolution Questions about how selection theory can claim to be the all sufficient explanation of evolution often go unanswered by today s neo Darwinists perhaps for fear that any criticism of the evolutionary paradigm will encourage creationists and proponents of intelligent design In Biological Emergences Robert Reid argues that natural selection is not the cause of evolution He writes that the causes of variations which he refers to as natural experiments are independent of natural selection indeed he suggests natural selection may get in the way of evolution Reid proposes an alternative theory to explain how emergent novelties are generated and under what conditions they can overcome the resistance of natural selection He suggests that what causes innovative variation causes evolution and that these phenomena are environmental as well as organismal After an extended critique of selectionism Reid constructs an emergence theory of evolution first examining the evidence in three causal arenas

of emergent evolution symbiosis association evolutionary physiology behavior and developmental evolution Based on this evidence of causation he proposes some working hypotheses examining mechanisms and processes common to all three arenas and arrives at a theoretical framework that accounts for generative mechanisms and emergent qualities Without selectionism Reid argues evolutionary innovation can more easily be integrated into a general thesis Finally Reid proposes a biological synthesis of rapid emergent evolutionary phases and the prolonged dynamically stable non evolutionary phases imposed by natural selection

*FireSigns* Steven Skaggs, 2017-03-03 Semiotics concepts from a design perspective offering the foundation for a coherent theory of graphic design as well as conceptual tools for practicing designers Graphic design has been an academic discipline since the post World War II era but it has yet to develop a coherent theoretical foundation Instead it proceeds through styles genres and imitation drawing on sources that range from the Bauhaus to deconstructionism In *FireSigns* Steven Skaggs offers the foundation for a semiotic theory of graphic design exploring semiotic concepts from design and studio art perspectives and offering useful conceptual tools for practicing designers Semiotics is the study of signs and significations graphic design creates visual signs meant to create a certain effect in the mind a *FireSign* Skaggs provides a network of explicit concepts and terminology for a practice that has made implicit use of semiotics without knowing it He offers an overview of the metaphysics of visual perception and the notion of visual entities and drawing on the pragmatic semiotics of the philosopher Charles Sanders Peirce looks at visual experience as a product of the action of signs He introduces three conceptual tools for analyzing works of graphic design semantic profiles the functional matrix and the visual gamut that allow visual personality types to emerge and enable a greater understanding of the range of possibilities for visual elements Finally he applies these tools to specific analyses of typography

*From Models to Simulations* Franck Varenne, 2018-09-03 This book analyses the impact computerization has had on contemporary science and explains the origins technical nature and epistemological consequences of the current decisive interplay between technology and science an intertwining of formalism computation data acquisition data and visualization and how these factors have led to the spread of simulation models since the 1950s Using historical comparative and interpretative case studies from a range of disciplines with a particular emphasis on the case of plant studies the author shows how and why computers data treatment devices and programming languages have occasioned a gradual but irresistible and massive shift from mathematical models to computer simulations

*Robert Smithson* Ann Reynolds, 2004-10-01 An examination of the interplay between cultural context and artistic practice in the work of Robert Smithson Robert Smithson 1938 1973 produced his best known work during the 1960s and early 1970s a period in which the boundaries of the art world and the objectives of art making were questioned perhaps more consistently and thoroughly than any time before or since In *Robert Smithson* Ann Reynolds elucidates the complexity of Smithson's work and thought by placing them in their historical context a context greatly enhanced by the vast archival materials that Smithson's widow Nancy Holt donated to the Archives of American Art

in 1987 The archive provides Reynolds with the remnants of Smithson's working life magazines postcards from other artists notebooks and perhaps most important his library from which she reconstructs the physical and conceptual world that Smithson inhabited Reynolds explores the relation of Smithson's art making thinking about art making writing and interaction with other artists to the articulated ideology and discreet assumptions that determined the parameters of artistic practice of the time A central focus of Reynolds's analysis is Smithson's fascination with the blind spots at the center of established ways of seeing and thinking about culture For Smithson New Jersey was such a blind spot and he returned there again and again alone and with fellow artists to make art that through its location alone undermined assumptions about what and more important where art should be For those who guarded the integrity of the established art world New Jersey was elsewhere but for Smithson elsewheres were the defining if often forgotten locations on the map of contemporary culture

**The Organizational Complex** Reinhold Martin, 2005-09-23 A historical and theoretical analysis of corporate architecture in the United States after the Second World War The Organizational Complex is a historical and theoretical analysis of corporate architecture in the United States after the Second World War Its title refers to the aesthetic and technological extension of the military industrial complex in which architecture computers and corporations formed a network of objects images and discourses that realigned social relations and transformed the postwar landscape In depth case studies of architect Eero Saarinen's work for General Motors IBM and Bell Laboratories and analyses of office buildings designed by Skidmore Owings Merrill trace the emergence of a systems based model of organization in architecture in which the modular curtain wall acts as both an organizational device and a carrier of the corporate image Such an image of the corporation as a flexible integrated system is seen to correspond with a humanization of corporate life as corporations decentralize both spatially and administratively Parallel analyses follow the assimilation of cybernetics into aesthetics in the writings of artist and visual theorist Gyorgy Kepes as art merges with techno science in the service of a dynamic new pattern seeing Image and system thus converge in the organizational complex while top down power dissolves into networked pattern based control Architecture as one among many media technologies supplies the patterns images of organic integration designed to regulate new and unstable human machine assemblages
