**Handbook of Harnessing Biomaterials in Nanomedicine** Dan Peer, 2012-01-12 This book concentrates on the use of biomaterials in nanomedicine. The areas of focus include drug delivery by polymers, lipids, and carbohydrates for the delivery of small molecules, RNA interference, and proteins; the use of nano proteins such as antibodies and peptides as targeting agents for therapeutics and diagnosis; the use of nanocarrier-based biomaterials for manipulation of stem cells; different aspects of toxicity of nanocarriers; the immune response; liver toxicity; and many more, and success stories of biomaterials that have reached the clinics. The book comprises theoretical and experimental analysis of various biomaterials that are used in nanomedicine research methods and preparation techniques and several promising applications.

**Steric Aspects Of Biomolecular Interactions** G. Naray-Naray-Szabo, 2018-01-18 The present volume deals with the application of the following techniques: computational chemistry, X-ray diffraction, and two-dimensional nuclear magnetic resonance. The book will discuss how these methods can be used to study steric aspects of biomolecular interactions.

Membrane Fusion Jan Wilschut, 2019-11-14 This balanced volume provides a broad and coherent overview of recent progress in membrane fusion research, highlighting an interdisciplinary treatment of the subject from the fields of biophysics, biochemistry, cell biology, virology, and biotechnology in a single volume. Featuring easy access sections on the general properties of membranes and applications of membrane fusion techniques, this valuable sourcebook outlines membrane structure, lipid polymorphism, and intermembrane forces; covers membrane fusion in model systems; presents the fusogenic properties of enveloped viruses; discusses the fusion and flow of intracellular membranes and cell-cell fusion occurring during fertilization and myogenesis; offers applications of membrane fusion techniques in cell biological research and biotechnology; and more. Supplying a comprehensive view of this exciting topic, *Membrane Fusion* is a working resource for molecular, cell, and membrane biologists, biophysicists, biochemists, virologists, biotechnologists, microbiologists, immunologists, physiologists, and graduate and medical school students in biophysics, biochemistry, physiology, virology, cell biology, and biotechnology.

*Advances in DNA Sequence-Specific Agents* J.B. Chaires, 1996-07-09 DNA sequence specificity is a sub-specialty in the general area of molecular recognition. This area includes macromolecular-molecular interactions, e.g., protein-DNA oligomer-DNA interactions, e.g., triple strands and ligand-DNA interactions, e.g., drug-DNA. It is this latter group of DNA sequence specificity interactions that is the subject of Volumes 1 and 2 of *Advances in DNA Sequence Specific Agents*. As was the case for Volume 1, Part A also covers methodology, but in Volume 2 we include calorimetric titrations, molecular modeling, X-ray crystallographic and NMR structural studies, and transcriptional assays. Part B also follows the same format as Volume 1 and describes the sequence specificities and covalent

and noncovalent interactions of small ligands with DNA This volume is aimed in general at scientists who have an interest in deciphering the molecular mechanisms for sequence recognition of DNA The methods have general applicability to small molecules as well as oligomers and proteins while the examples provide general principles involved in sequence recognition

**The Steroid/Thyroid Hormone Receptor Family and Gene Regulation** J. Carlstedt-Duke, 2013-11-21 The Second International CBT Center for Biotechnology Symposium was held in Stockholm November 4 5 1988 and had the title The steroid thyroid hormone receptor family and gene regulation This meeting contained contributions from most leading laboratories within the field of steroid thyroid hormone receptors and gave a very exciting perspective on the dynamic development of this important research field Today all known steroid hormone receptors have been cloned and sequenced and novel members of this supergene family are constantly being discovered Some of these new receptors remain to be characterized regarding the nature of their ligand Access to probes for steroid receptors has enabled studies on mechanisms of regulation of receptor gene expression Deletion and insertion analysis of steroid receptor cDNAs followed by expression in cells together with suitable reporter genes has yielded a detailed knowledge about the functional significance of the various domains the receptors are composed of In certain cases steroid resistance in patients have been shown to be due to point mutations in the corresponding steroid receptor genes resulting in non functional receptors The availability of receptor cDNAs also makes it possible to express receptors at high levels in procaryotic and eucaryotic cells It is e g possible to express the DNA binding domain of the glucocorticoid receptor in E coli as a fusion protein with protein A which interacts specifically with DNA Such studies are necessary for production of sufficient quantities of receptors to allow crystallization and X ray crystallography for detailed structural information

**Enzyme Chemistry** Colin Suckling, 2012-12-06 As the first edition of this book was going through the publication process a revolution was taking place in the technologies available for the study of enzymes The techniques of molecular biology especially in genetic engineering of organisms and in site specific mutagenesis of genes were established and were being brought into use to solve many problems in enzymology Added to these fundamental and applied science not least advances the possibility of generating catalysts from antibodies has become a topic of major interest These major innovations have changed the emphasis of much bioorganic research whereas in the past the protein was often the sleeping partner in a study its detailed function is now the major focus of scientific interest Similarly in industry the potential of genetically manipulated organisms to satisfy the needs for the production of chemicals and foodstuffs has been widely recognised The second edition of Enzyme Chemistry Impact and Applications takes on board these new developments whilst maintaining the overall aims and views of the first edition Many of the chapters have been completely rewritten to take account of advances in the last five years especially with regard to the impact of biologically based technologies Although the book continues to approach its subject matter from the point of view of the chemist the increased interdisciplinary content of much modern science will be obvious from the discussion

**DNA-Ligand Interactions**

W. Guschlbauer, 2013-06-29 This volume contains the texts of the nineteen lectures presented at the NATO ASI FEBS Course on DNA ligand interactions from drugs to proteins The Advanced Study Institute ASI was held from August 30th to September 11th 1986 in the Abbey of Fontevraud France The ASI was attended by 112 participants from a wide scientific horizon and from twentyone different countries It was in some way a follow up of the ASI held in Maratea Italy in May 1981 and which was published in the NATO ASI Life Science series as volume 45 While much has been learned about the way the cellular machinery maintains and transmits the genetic heritage as well as how these processes are regulated little is known about how the interactions between the various partners involved are taking place The interactions of drugs and proteins with nucleic acids are of evident importance in the understanding of these problems The spectacular advances in recombinant DNA technology and the increased sophistication of biophysical techniques in particular x-ray diffraction and nuclear magnetic resonance have created a scientific environment which is highly promising for the future of research in molecular biology These advances permit the serious hope that biology on the molecular level may become a reality Some of the contributions at the ASI presented the most recent advances in this exciting field **Molecules in Physics, Chemistry, and Biology** J. Maruani, 2012-12-06 Volume 1 General Introduction to Molecular Sciences Volume 2 Physical Aspects of Molecular Systems Volume 3 Electronic Structure and Chemical Reactivity Volume 4 Molecular Phenomena in Biological Sciences **Molecular Basis of Specificity in Nucleic Acid-Drug Interactions** A. Pullman, Joshua Jortner, 2012-12-06 One of the central problems in the study of the mechanism of DNA ligand interactions is the existence and nature of sequence specificity with respect to the base pairs of DNA The presence of such a specificity could be of particular significance because it might possibly mean the involvement of specific genes in the effectiveness of the different drugs The elucidation of the factors responsible for the specificity could then be important for the development of compounds susceptible to contribute to the control of gene expression and also to the development of rationally conceived improved new generations of effective and specific chemotherapeutic agents Important recent achievements experimental and theoretical in the analysis of such sequence specificities open prospects for possible rapid progress in this field The 23rd Jerusalem symposium was devoted to the exploration of these recent achievements in relation to many types of ligand with special emphasis on antitumor drugs All major types of interaction intercalation groove binding covalent linking coordination have been considered So was also the effect of the interaction on the structure and properties of the nucleic acids and the relationship between the interaction and biological or pharmacological activities We feel that this Volume presents a relatively complete up to date account of the state of the art in this important field of research Receptor Mediated Antisteroid Action M. K. Agarwal, 2019-05-20 No detailed description available for Receptor Mediated Antisteroid Action **Cooperative Approaches to Research and Development of Orphan Drugs** Melvin H. Van Woert, Eunyong Chung, 1985 *Biochemistry and Biology of DNA Methylation* Giulio L. Cantoni, Aharon Razin, 1985 **Bacterial**
