**Constructed Situations** Frances Stracey,2014-10-20 The Situationist International were a group of anti authoritarian highly cultured revolutionary artists whose energy and enragement fundamentally shaped the revolutions of the late 1960 s most famously in Paris in May 68 They took on their shoulders the history of the workers struggle saw that it had been corrupted by authoritarianism and transformed it with influences incorporating the avant garde via Dada and Surrealism They were not Marxologists defenders of the faith Marxism came back to life in their raging analyses the use of the spectacle and at the heart of the project was the idea of the constructed situation This book by Frances Stracey offers itself up as the first historiography of constructed situations Within it are new insights into the movement and with them a

sense of relevance to political situations and practice today As an archivist Stracey uncovered new documents which amongst other things revealed how the SI related to representations of sexuality and is able to discuss whether they could be considered as feminists or not She also looked at their famous motto Never Work and again shows how alienated labour is even more relevant to us today Constructed Situations is not a history of celebrated personalities or cultural influences or political circumstances It is instead an open door to one of the most influential art movements in modern history and an invitation for us to reclaim inspiration from this ubiquitous movement

Biocivilisations Predrag B. Slijepcevic, 2023-05-18 2024 Nautilus Book Award Gold Medal Winner Restorative Earth Practices A brilliant book that shows a way out of the destructive trap of Anthropocentric arrogance Vandana Shiva author of Terra Viva An unusually thought provoking and ambitious book Dr James A Shapiro author of Evolution A View from the 21st Century Biocivilisations is an

important original rethinking of the mystery of life and its deep uncertainty exploring the complex civilisations that existed on Earth long before humans What is life Many scientists believe life can be reduced to mechanistic factors such as genes and information codes Yet there is a growing army of scientists philosophers and artists who reject this view The gene metaphor is not only too simplistic but deeply misleading If there is a way to reduce life to a single principle that principle must acknowledge the creativity of life turning genetic determinism on its head The term biocivilisations is the acknowledgement of this uncertainty of life as opposed to a quasi certainty of the human position governed by a narrow time window of the scientific revolution Life existed without humans for more than 99.99 percent of the Earth's existence Life will also continue without humans long after our inevitable extinction In Biocivilisations Dr Predrag Slijepcević shows how bacteria amoebas plants insects birds whales elephants and countless other species not only preceded human beings but demonstrate elements of how we celebrate human civilisation complex communication agriculture science art medicine and more Humans must try to adopt this wisdom from other biocivilisations that have long preceded our own By rethinking the current scientific paradigm Dr Slijepcević makes clear that a transformation from a naïve young species into a more mature species in tune with its surroundings will save us from our own violence and the violence we inflict on the rest of our living planet Read this book if you would like to understand the intelligence of living systems Dr Denis Noble University of Oxford
