Molecular Genetics Of Immunoglobulin:

Molecular Genetics of Immunoglobulin F. Calabi, M.S. Neuberger, 1987-12-01 Our understanding of the molecular genetics of immunoglobulins has been enormously advanced by the application of recombinant DNA technology This new volume in the popular series New Comprehensive Biochemistry contains eight chapters that draw together reviews summarising the research into immunoglobulins and the arrangement rearrangement and expression of their gene structure Molecular Genetics of Immunoglobulin will be of particular importance to those working in the areas of genetics and molecular biology immunology and cell biology

Immunoglobulin Genes Tasuku Honjo, Frederick W. Alt, 2012-12-02 Immunoglobulin Genes is the first comprehensive book on the structure function and expression of the genes encoding antibodies in normal and neoplastic cells

The Genetic Markers of Human Immunoglobulins Rune E. Grubb, 2012-12-06 It has long been known that every individual has a large number of antibodies of different specificities Antibodies are gammaglobulins and protein structure in cells is genetically determined The extreme multiplicity of structure of the combining sites of antibodies relative to the degree of multiplicity generated by ordinary genetic mechanisms is a fascinating problem of bio medical importance The functional heterogeneity of reactions mediated by immunoglobulins is remarkable ranging from protection against life threatening toxins and microbes to the production of laryngeal edema leading to suffocation and death from anaphylaxis An approach to the understanding of immunoglobulin polymorphism based upon a knowledge of genetic markers of immunoglobulin structure is not biased by the question of whether or not this polymorphism is related to combining site diversity Though several recent reviews of the multifaceted problems related to immunoglobulins are available it was decided to publish this survey in the belief that knowledge of the genetic markers of immunoglobulins provides such information about immunoglobulin differentiation and its control as cannot be obtained from other sources Several of the human genetic immunoglobulin markers are well understood at the molecular level The Gm system may serve as a model for other immunogenetic systems The published data on the human immunoglobulin factors are widely scattered in journals of different perspectives There is a need for a systematic presentation of these data and for their critical evaluation

Biochemistry and Molecular Biology Compendium Roger L. Lundblad, 2007-06-08 While biomedical investigation has greatly advanced investigators have lost touch with and inadvertently corrupted significant nomenclature at the foundation of their science Nowadays one has to be an insider to even understand the titles of journals as modern biochemists have a tendency to invent new terms to describe old phenomena and apply a

Flow Cytometry, Immunohistochemistry, and Molecular Genetics for Hematologic Neoplasms Tsieh Sun, 2012-01-19 Immunophenotyping is the most powerful tool in the routine diagnosis of hematologic neoplasms Immunohistochemical technique is used in histology labs for this purpose while flow cytometry is used in clinical labs Although separately these 2 techniques are very useful in detecting lymphomas and leukemias the combination of both creates a very powerful and definitive diagnostic tool The addition of molecular genetics to the book makes it an all encompassing reference text
