Molecular Targeting And Signal Transduction:

Molecular Targeting and Signal Transduction Rakesh Kumar, 2004-04-30 Our limited understanding of cellular regulatory signal transduction networks has been a barrier to progress in improving the overall cure rate of human cancers. Delineation of the physiologic roles of the specific regulatory signaling components with known association with metastatic phenotypes is a highly promising area which will likely provide the next generation of targeted strategies in the future of molecular cancer medicine. These signaling components are likely to be used in diagnosis, prognosis, and as novel targets for therapeutic development. This book brings together up to date summaries by leading cancer researchers on the major principles of cancer cell biology, survival, apoptosis, adhesion, and cell cycle deregulation. It is directed at clinicians and scientists working in the areas of experimental and molecular therapeutics, molecular medicine, translational cancer research, and biomedical sciences in general.

Aggarwal, Young-Joon Surh, S. Shishodia, 2007-08-06. Curcumin is derived from the root of the plant *Curcuma longa*, also called turmeric, and its medicinal uses have been described for over 5000 years. More than 1500 papers published within the last half a century have revealed that curcumin has a potential in the treatment of a wide variety of inflammatory diseases including cancer, diabetes, cardiovascular diseases, arthritis, Alzheimer's, psoriasis, etc., through modulation of numerous molecular targets. This is the first monograph to deal specifically with this subject. Targeted Molecular Imaging in Oncology E. Edmund Kim, David J. Yang, 2013-06-29. Cancer cells differentiate with respect to cell function; their vascularity is more leaky, but perfusion is heterogeneously reduced, and interstitial fluid pressure is high, severely retarding delivery of agents from the blood. Targeted imaging is designed to produce a detectable difference between tissue that is visualized with single-photon and positron emission tomography, magnetic resonance imaging, computed tomography, or ultrasonography. This book uniquely reports strategies for the application of molecular targeted imaging agents such as antibodies, peptides, receptors, and contrast agents in the biologic grading of tumors, differential diagnosis of tumors, prediction of therapeutic response, and monitoring tumor response to treatment. This book also describes updated information about the imaging of tumor angiogenesis, hypoxia, apoptosis, and gene delivery, as well as expression in the understanding and utility of tumor molecular biology for better cancer management.

Molecular Targets And Therapeutic Uses Of Spices: Modern Uses For Ancient Medicine Bharat B. Aggarwal, Ajaikumar B. Kunnumakkara, 2009-05-18.
